ABOUT THE CONFERENCE

The International Conference on “Sustainable, Responsible, and Inclusive Business Growth through Technology” aims to explore the transformative role of emerging and next-generation technologies in fostering sustainable development, ethical business practices, and inclusive growth across the domains of commerce, management, accounting, and finance.

In today’s rapidly evolving business landscape, technological advancements such as Artificial Intelligence (AI), Machine Learning (ML), Big Data Analytics, Blockchain, Cloud Computing, Automation, and the Internet of Things (IoT) are significantly influencing organizational strategies and operations. These technologies are not only enhancing efficiency and innovation but are also reshaping organizational structures, decision-making processes, value creation mechanisms, and stakeholder relationships.

The conference emphasizes the integration of technological innovation with sustainability and social responsibility, encouraging discussions on how businesses can achieve long-term growth while addressing environmental and societal challenges. It also highlights the importance of ethical practices, inclusivity, and responsible governance in the digital era.

By bringing together academicians, researchers, industry experts, and students from diverse backgrounds, the conference provides a dynamic platform for knowledge sharing, interdisciplinary dialogue, and collaborative learning. It seeks to generate meaningful insights and practical solutions that contribute to building a sustainable, responsible, and inclusive business ecosystem.

ABOUT NCMS

Nagarjuna College of Management Studies (NCMS) is a premier institution committed to delivering quality higher education with a strong emphasis on academic excellence, innovation, ethical values, and industry relevance. Established under the aegis of the Nagarjuna Education Society, NCMS offers a wide range of undergraduate and postgraduate programs in commerce, management, science, and computer applications, including B.Com, B.Com-BDA, BBA, BCA, B.Sc., B.Sc.-AI, and MBA.

The institution is dedicated to nurturing competent, socially responsible, and career-ready graduates equipped with contemporary knowledge, practical skills, and a global outlook. NCMS strives to create an academic ecosystem that promotes critical thinking, creativity, and lifelong learning.

The campus provides a vibrant and intellectually stimulating environment that supports learning, research, and professional development. Students benefit from continuous industry interaction through expert lectures, workshops, seminars, case studies, research initiatives, and skill-based training programs. These efforts ensure a seamless transition from academic learning to professional careers.

With a strong focus on quality enhancement, continuous improvement, and societal contribution, NCMS remains committed to shaping future-ready professionals capable of excelling in a dynamic and competitive global environment.

FOREWORD

To the Reader,

It is a great honour and privilege to write the foreword for the proceedings of the 3rd International Conference on “Sustainable, Responsible, and Inclusive Business Growth through Technology,” organized by the Department of Commerce and Management in association with IQAC, Nagarjuna College of Management Studies (NCMS), Chikkaballapur, on 28th March 2026.

This conference has served as an important platform for academicians, researchers, industry professionals, and students to engage in meaningful discussions on contemporary business challenges and opportunities shaped by technological advancements. The deliberations focused on how emerging technologies such as Artificial Intelligence, Big Data, Blockchain, and other digital innovations are transforming business practices while promoting sustainability, responsibility, and inclusiveness.

The conference witnessed insightful keynote sessions and research presentations by eminent speakers and scholars from various institutions. The selected research contributions included in this proceedings volume reflect the quality, diversity, and relevance of current research in commerce and management.

I extend my heartfelt congratulations to the organizing committee, reviewers, paper presenters, and all participants for their dedicated efforts in making this conference a grand success. I am confident that this proceedings publication will serve as a valuable resource for researchers, academicians, and practitioners, and will inspire further research and innovation in the field.

Prof. Manohar Narajji

Director, Nagarjuna Education Society (NES)

PREFACE

The 3rd International Conference on “Sustainable, Responsible, and Inclusive Business Growth through Technology,” held on 28th March 2026, was organized by the Department of Commerce and Management in association with the Internal Quality Assurance Cell (IQAC), Nagarjuna College of Management Studies (NCMS), Chikkaballapur.

In an era characterized by rapid technological advancement and dynamic global transformations, the conference was conceived as a platform to examine the critical role of emerging technologies in shaping sustainable, ethical, and inclusive business practices. It brought together academicians, researchers, industry professionals, and students from diverse disciplines to engage in meaningful dialogue, share research insights, and explore innovative solutions to contemporary business challenges. The conference focused on a broad spectrum of thematic areas, including Finance, Accounting, and Taxation; Human Resource Management; Marketing; Information Technology and Business Analytics; and General Management and Entrepreneurship. These themes reflect the interdisciplinary nature of modern business environments and the increasing integration of technology across all functional domains.

The response to the conference was highly encouraging, with a significant number of research abstracts received from participants across various institutions and regions. All submissions were subjected to a structured review process by the review committee to ensure academic rigor and quality. The selected abstracts presented in this proceedings volume represent diverse perspectives, contemporary issues, and emerging trends in the fields of commerce and management.

This proceedings publication is a reflection of the collective intellectual effort and scholarly contributions of the participants. It is expected to serve as a valuable resource for academicians, researchers, practitioners, and students, fostering further research, innovation, and informed decision-making.

I take this opportunity to express my sincere gratitude to the management of the Nagarjuna Education Society for their continuous support and encouragement. I also extend my heartfelt appreciation to the organizing committee, review committee, session chairs, and all contributors for their dedication and commitment in making this conference a grand success.

Dr. Anandamma N,

Professor and Principal, NCMS

MESSAGE

It gives me immense pleasure to extend my greetings on the occasion of the 3rd International Conference on “Sustainable, Responsible, and Inclusive Business Growth through Technology,” organized by the Department of Commerce and Management in association with IQAC, Nagarjuna College of Management Studies (NCMS), Chikkaballapur, in collaboration with Field Marshal K M Cariappa College, Madikeri.

In today’s rapidly evolving global business environment, the integration of technology with sustainable and responsible practices has become essential for long-term growth and societal well-being. This conference provides a meaningful platform for academicians, researchers, and industry experts to deliberate on contemporary issues and explore innovative approaches that promote inclusive and ethical business practices.

I am delighted that this collaborative initiative between our institutions fosters academic exchange, research excellence, and interdisciplinary learning. Such academic engagements play a crucial role in enhancing knowledge, encouraging critical thinking, and bridging the gap between academia and industry.

I appreciate the efforts of the organizing committee, faculty members, and students who have worked diligently to make this conference a success. I also congratulate the authors and participants for their valuable research contributions, which are reflected in this proceedings volume.

I am confident that the insights shared during this conference will contribute significantly to the academic community and inspire further research in the field of commerce and management.

I extend my best wishes for the grand success of the conference and for many more such collaborative academic initiatives in the future.

Maj. Dr. Raghava B

Professor & Principal

Field Marshal K M Cariappa College, Madikeri

Abstract

This study examined the level of digital financial literacy among users of Buy Now Pay Later services in Dakshina Kannada district, Karnataka, and analysed its relationship with financial satisfaction. The mediating roles of financial awareness and credit risk perception were also assessed. Data were collected through a structured questionnaire using a primary survey method. 288 valid responses were used for analysis. Digital financial literacy was treated as the independent variable, financial awareness and credit risk perception as mediating variables, and financial satisfaction as the dependent variable. The data were analysed using descriptive statistics, correlation analysis, multiple regressions, and mediation analysis using the Hayes PROCESS Macro (Model 4) in SPSS. The results showed that digital financial literacy had a significant positive relationship with financial satisfaction. Digital financial literacy was also positively related to financial awareness and credit risk perception. Both financial awareness and credit risk perception partially mediated the relationship between digital financial literacy and financial satisfaction. The study provides evidence that financial satisfaction among Buy Now Pay Later users is influenced by digital financial literacy both directly and through awareness and risk perception. The findings highlight the need to strengthen digital financial literacy and awareness among active users of digital credit services.

Keywords: *Digital financial literacy, financial awareness, credit risk perception, financial satisfaction, Buy Now Pay Later, India*

A Study on Consumer Preference for Private UPI Platforms over Traditional Banking Apps in India.

Sushmitha P.S¹

¹Lecturer in Department of Commerce., FMKMC College, Madikeri

Abstract

India's digital landscape is witnessing a curious phenomenon: while traditional banks hold the keys to the kingdom in terms of deposits and security, private Fintech players (PhonePe, Google Pay, and Paytm) have won the war for the Indian consumer's daily attention. As of early 2026, secondary data from the NPCI and RBI confirms a massive concentration of power, with private Third-Party Application Providers (TPAPs) facilitating over 85% of all UPI transaction volumes. This research investigates why Indian consumers choose these private interfaces over their bank's own mobile applications for both transactions and financial learning. The study identifies that the preference is rooted in user-centric design rather than institutional trust. Secondary evidence indicates that private apps succeed by offering a "frictionless" experience—minimalist interfaces, instant notification sounds (Soundboxes), and gamified rewards—which act as a form of "invisible digital literacy." While bank apps are often perceived as utility-heavy and cluttered, private UPI apps function as lifestyle tools that teach users how to manage money through real-time spending insights and "nudge" notifications. The findings suggest a clear functional divide: Indian consumers view traditional bank apps as "safe vaults" for high-value tasks, but prefer private Fintech apps as their "digital companions" for everyday life. This study concludes that for traditional banks to regain relevance in the retail space, they must transition from being purely transaction-oriented to becoming engagement-driven, mimicking the human-centric UX that has made private Fintech apps the primary gateway to India's digital economy.

Key words: *Digital payment, UPI, financial literacy, Fintech, BHIM, scheduled Banks.*

Employee Well-being and Workplace Design: How Physical Workspace Environments Impact Mental Health and Productivity

Ahamed Athiq Sazzath A¹

¹Student, Master of Arts in Urban Studies, Indira Gandhi National Open University

Mobile No., +91 7904144912, Email: ahamedsazzath@gmail.com

Abstract:

The physical environment in which people spend their working hours is far more influential than most organizations acknowledge. This paper explores the relationship between workplace design and employee well-being, focusing specifically on how features such as natural lighting, noise management, spatial arrangement, biophilic elements, and ergonomic infrastructure shape both mental health outcomes and day-to-day productivity. Using a conceptual approach grounded in environmental psychology, organizational behaviour theory, and existing empirical literature, this study examines the Indian corporate context — with particular emphasis on Bengaluru, a city that represents the country's booming knowledge economy. The paper argues that while human resource management (HRM) has traditionally prioritized policy-level interventions to support employee welfare, the built environment itself constitutes a powerful, underutilized HR tool. Synthesizing findings from international and Indian studies, the paper identifies critical gaps in how organizations — especially small and medium enterprises — address workspace ergonomics and mental health. Key recommendations include adopting evidence-based interior design principles, integrating well-being metrics into workspace audits, and treating physical design decisions as strategic HRM choices rather than purely aesthetic or cost-driven ones. The paper contributes to a growing body of literature that bridges interior design with HRM, offering actionable insights for practitioners and scholars alike.

Keywords: *workplace design, employee well-being, mental health, productivity, biophilic design, ergonomics, HRM, environmental psychology*

Scroll and Sustain: The Impact of Digital Media on Youth Behaviour and Well Being

Ambika V M¹, Dr. Kavitha C², Shivakumar M M³

[1] [2] [3] Assistant professor, Nagarjuna College of Management Studies,
Chikkaballapura.

ambikapragati@gmail.com, +91 9620080138

Abstract:

In today's digital world, scrolling has become a daily habit for most young people. What begins as curiosity and a passion to explore new ideas often turns into long hours spent on mobile phones and gadgets. Social media and digital platforms provide youth with opportunities to learn, connect, and grow. At the same time, excessive usage can slowly distance them from cultural values, discipline, and meaningful personal relationships. This paper explores the dual impact of digital media on youth behaviour and well-being. This study is based on both primary and secondary data sources, and a total sample of 50 respondents was considered for the analysis. On one side, digital platform empower young minds by offering educational resources, skill development opportunities, and social awareness. On the other side, uncontrolled scrolling may lead to addiction, time mismanagement, emotional stress, and reduced real-life interaction. By understanding both the positive and negative dimensions of digital engagement, this study highlights the importance of mindful and balanced usage. In the contemporary digital era, scrolling has become an inseparable part of youth lifestyle. Mobile phones and digital gadgets are no longer mere communication tools but constant companions influencing thoughts, behaviour, and social interactions. While digital media offers vast opportunities for learning, creativity, and global exposure, excessive and uncontrolled usage has raised concerns regarding addiction, cultural detachment, emotional instability, and declining interpersonal relationships. The aim is not to discourage digital participation but to encourage responsible scrolling that supports personal growth, cultural connection, and overall well-being among youth.

Key words: *Behaviour, Youth behaviour, Mental health, Digital media.*

AI-Driven Responsible Marketing: Examining the Impact of Ethical Data Practices on Sustainable Brand Equity

Ashvitha P N¹

¹ Lecturer Department of Commerce and Management

Field Marshal K M Cariappa College Madikeri

Abstract:

Artificial intelligence has transformed contemporary marketing practices by enabling hyper-personalization and predictive analytics. While AI-driven personalization enhances customer engagement and operation efficiency, concerns regarding data privacy, transparency, bias and ethical governance have intensified. As AI – driven marketing continues to shape consumer experiences, the responsible handling of customer data has become a critical factor in building trust and loyalty. This study examines the role of ethical data practices in AI-driven marketing and their impact on sustainable brand equity through the data analysis approach. Drawings upon existing literature, industry reports, and documented case studies, the study synthesizes insights on responsible data collection, algorithmic transparency, consent management, and fairness in automated decision-making. The findings suggest that ethical AI practices significantly contribute to long-term brand trust, customer loyalty, and reputational resilience-key dimensions of sustainable brand equity. Companies that prioritize transparent data policies, robust cyber security measures, and compliance with global data protection regulations demonstrate stronger consumer confidence and improved brand perception. Conversely, unethical data usage, algorithmic bias, and privacy breaches undermine stakeholder trust and erode brand value over time. The paper further highlights that responsible AI adoption is not merely a regulatory requirement but a strategic imperative for sustainable and inclusive business growth. Ethical data governance frameworks enable firms to balance personalization with privacy, fostering mutually beneficial relationships between organizations and consumers. The study contributes to the growing discourse on sustainable marketing by proposing that AI-driven responsible marketing practices act as critical enablers of enduring competitive advantage

Keywords: *Artificial Intelligence, Responsible Marketing, Ethical Data Practices, Consumer Trust, Sustainable Brand Equity.*

The Role of Sustainable Finance in Promoting Long-Term Economic Growth and Environmental Stability

Chaithanya B¹

¹Assistant Professor, Nagarjuna College of management studies Email:

Chaithanyaajay963@gmail.com

Abstract:

Sustainable finance has gained significant attention as a strategic mechanism for aligning economic development with environmental sustainability. Amid rising climate risks, environmental degradation, and global financial instability, integrating sustainability into financial systems has become increasingly important. This study examines the role and importance of sustainable finance in promoting long-term economic growth and environmental stability. The research adopts a qualitative and analytical methodology based on secondary data collected from academic journals, policy reports, institutional publications, and global financial databases. A descriptive and comparative analysis is used to evaluate key components of sustainable finance, particularly Environmental, Social, and Governance (ESG) principles, and to assess the contribution of financial instruments such as green bonds, ESG investing, and impact investing toward sustainable economic development. The findings indicate that sustainable finance enhances capital allocation efficiency, strengthens corporate governance, promotes environmentally responsible investments, and reduces long-term environmental risks. However, challenges such as regulatory inconsistencies, lack of standardized ESG reporting, limited awareness, and financial constraints in developing economies hinder its effective implementation. The study concludes that strengthening regulatory frameworks, improving transparency, and promoting sustainable investment practices are essential for achieving long-term economic growth while ensuring environmental stability.

Key words: *ESG, Corporate governance, sustainability, green bonds, Financial Instrument.*

Agri-Innovation in the Highlands: The Role of Startups in Transforming Agriculture in Kodagu District of Karnataka

Dr. Gayathri Devi. A¹, Chaithra B. N²

¹Professor, Department of Commerce and Management, Field Marshal K. M Cariappa, College, Madikeri, Kodagu District 9448647229

²Research Scholar Department of Post Graduate Studies and Research in Commerce
Mangalore University, Mangalagangothri Mangalore- 574199, 94832087

Abstract

Kodagu district, situated within the Western Ghats, represents a significant agricultural area characterized by the cultivation of primary crops such as coffee (both Arabica and Robusta), paddy, pepper, and cardamom. As a prominent district in India renowned for coffee and spice production, Kodagu also sees extensive paddy cultivation in its valleys. According to the Coffee Board of India, the district of Kodagu, commonly referred to as Coorg, accounts for roughly 35% of the nation's coffee output and is recognized as a biodiversity hotspot within the Western Ghats. Nevertheless, the farming community in this region confronts systemic obstacles, including diminished production levels, severe labor shortages, climate-induced uncertainties, escalating costs of inputs, and consequently a rise in cultivation expenses, which collectively exert significant pressure on the agrarian economy of the district. Renowned for its abundant biodiversity and plantation-based economy, Kodagu district is currently experiencing the rise of agricultural startups that concentrate on coffee, spices, horticulture, and organic farming. These startups utilize technology, sustainable methodologies, and market connections to convert traditional agricultural practices into a more entrepreneurial and scalable framework. Such enterprises are contributing to the increase of farmers' incomes, promoting the adoption of advanced technologies, and diversifying agricultural initiatives across various sectors, including Agri-tech, food processing, organic farming, and dairy production. This article examines the rise of agricultural startups, investigates their scope, progress, and the challenges they encounter in Kodagu, while considering the implications of government initiatives, local innovations, and cooperative support systems. The findings suggest that startups play a significant role in enhancing value

chains, improving technology adoption among farmers, and promoting diversified agricultural activities in highland ecosystems.

Keywords: *Agriculture, Agricultural startups, Agri-tech, Farming community*

Consumer Trust and Data Privacy: Challenges in Modern E-Commerce Platforms

Ms. Deepika B N¹

¹Assistant professor, Department of Commerce and Management, NCMS

Chikkaballapura, Email id- deepikabn57@gmail.com

Abstract

E-commerce platforms have expanded quickly, changing the way consumers shop by offering individualized experiences, quick transactions, and convenience. Online retailers gather a lot of personal data, such as browsing patterns, past purchases, location information, and payment details, in order to provide these benefits. Customized recommendations and improved services are made possible by this data, but it also poses significant privacy and customer confidence issues. Sensitive data has been made public by frequent cyber-attacks, identity theft, and data leaks, resulting in monetary losses and a decline in confidence in online retailers. In response, governments around the world have enacted tough privacy rules, including Europe's General Data Protection Regulation (GDPR), the California Consumer Privacy Act (CCPA), and India's Digital Personal Data Protection (DPDP) Act. These policies compel corporations to obtain users' explicit agreement, minimize superfluous data gathering, provide openness about data usage, and give consumers control over their information. However, insufficient enforcement and the use of deceptive website designs, sometimes known as dark patterns, continue to erode these safeguards. Data privacy is further complicated by the expanding usage of technologies like chat bots, recommendation engines, artificial intelligence, and image-based search. These systems frequently aggregate data from various sources, which raises the possibility of abuse or illegal access. Additional ethical and legal problems arise with protecting the data of kids. According to research, the majorities of users are very concerned about their privacy and may stop using platforms that don't protect their data.

In order to preserve customer trust and guarantee long-term growth, this study examines the primary privacy issues in contemporary e-commerce and highlights the necessity of moral data practices, robust cyber security measures, and rigorous adherence to rules.

Keywords: *E-Commerce, Consumer Trust, Data Privacy, Cyber security, Regulatory Compliance*

A Comparative Study of CSR Spending and Financial Performance in FMCG and IT Sectors in India

V Deepika Nandini¹

¹Assistant Professor, Nagarjuna College of Management Studies

Abstract

Corporate Social Responsibility (CSR) has transitioned from voluntary philanthropy to a statutory obligation under the Companies Act, 2013 in India. As businesses increasingly align with sustainability and stakeholder expectations, examining the financial implications of CSR spending becomes crucial. This study presents a comparative analysis of CSR expenditure and financial performance in selected FMCG and IT companies in India. Using secondary data drawn from annual reports over a five-year period, the research evaluates CSR expenditure and CSR intensity (percentage of net profit) in relation to key financial indicators such as Return on Assets (ROA), Return on Equity (ROE), and net profit growth. Descriptive and trend analysis techniques are employed to identify sector-wise variations and emerging patterns. The paper seeks to determine whether higher CSR allocation corresponds with improved financial outcomes and whether such relationships differ between FMCG and IT sectors. The findings aim to provide insights into the strategic importance of CSR investment in driving sustainable and responsible business growth within the Indian corporate environment.

Key Words: *Return on Assets, Return on Equity, Net profit, Trend Analysis Techniques*

AI-Assisted Adaptive Cryptographic Framework for Energy-Efficient IoT Security

Devika Rajan¹, Mrs. Jyothi L², Ms. Jeevitha V³

¹Assistant Professor Department of Science, NCMS

²Assistant Professor Department of Science, NCMS

³Assistant Professor Department of Science, NCMS

Abstract

The increasing deployment of Internet of Things (IoT) devices in critical infrastructures has introduced significant security vulnerabilities due to their limited computational and energy resources. Existing IoT security solutions primarily employ static cryptographic configurations, which fail to adapt to real-time variations in network threat intensity and often result in inefficient energy utilization. This paper proposes an AI-assisted adaptive cryptographic framework that dynamically modulates encryption strength based on machine learning–driven threat scoring. A Random Forest–based anomaly detection model is integrated with a real-time encryption switching mechanism capable of transitioning between AES-128, AES-256, and multi-layer authentication modes. A formal energy-security optimization model is developed to minimize total energy consumption while satisfying predefined security constraints. Experimental evaluation using the CICIDS2017 and BoT-IoT datasets demonstrates that the proposed framework achieves a 34.7% reduction in energy consumption under low-threat conditions while maintaining a 97.8% attack detection accuracy and strong resistance against replay and man-in-the-middle attacks. These results confirm that intelligent cryptographic adaptation significantly enhances both operational efficiency and security robustness in resource-constrained IoT environments.

Keywords: *IoT Security, Adaptive Cryptography, Machine Learning, Energy Optimization, Dynamic Encryption.*

Intelligent Systems and Workforce Performance: A New Era of Organizational Excellence

Mr. Dileep D¹

¹Assistant professor, Department of Computer Science and Application, Sri Bhagawan Mahaveer Jain First Grade College, KGF, Karnataka, 563121 Mail id:

mailtodileepd1@gmail.com

Abstract:

In today's scenario organizations worldwide are Artificial intelligence driven. Day by day the need for AI has been increasing in all fields. This led to the integration of Artificial intelligence with Business and resulted in Business intelligence. There is a strong need to study how AI plays an essential role in impacting employee performance. Artificial Intelligence (AI) is reshaping the modern workplace by enhancing employee performance, streamlining workflows, and fostering innovation. The AI-powered technologies eliminate tedious work, allowing staff to focus on the strategic and creative elements of their jobs. Additionally, AI-powered analytics enable data-driven decision-making, which increases efficiency and accuracy. However, the integration of AI also presents challenges, including the need for up skilling, ethical concerns, and potential job displacement. This paper explores the profound impact of AI on employee performance and how it is responsible for improving employee productivity, decision-making, and job satisfaction. Additionally, how AI will affect employee performance and how that performance might improve efficiency, productivity, and job satisfaction. It further discusses the importance of fostering a collaborative human-AI ecosystem that prioritizes ethical considerations and ensures equitable access to the benefits of AI-driven workplace transformation.

Keywords: *Artificial Intelligence (AI), Business Intelligence, Employee Performance and Workplace Transformation*

Hybrid Technology as Catalysts for SMEs Resilience and Inclusive Development: Evidence from Madikeri Taluk

Ms. Divya N T¹

¹Lecturer Department of Commerce and Management , FMKMC College Madikeri

6364729400, divyachari19@gmail.com

Abstract

Small and Medium Enterprises (SMEs) play a vital role in stimulating local economies by generating employment, creating income opportunities, and supporting community development, especially in semi-urban and rural settings. They contribute significantly to strengthening local supply networks and enhancing social and economic stability. Despite their importance, many SMEs encounter multiple challenges such as inadequate access to digital infrastructure, financial limitations, insufficient digital skills, and limited market reach. These obstacles restrict their ability to compete and grow sustainably in a rapidly evolving digital environment. This study explores how hybrid digital technologies can help overcome these constraints. Hybrid technologies refer to the integration of conventional business practices with modern digital solutions. For instance, businesses may combine cash transactions with digital payment platforms, operate physical outlets alongside e-commerce channels, use cloud-based accounting software, and adopt training models that merge in-person sessions with online learning. Such blended approaches enable enterprises to transition toward digitalisation in a gradual and manageable manner while retaining familiar operational methods. The paper proposes that the adoption of hybrid digital systems can improve productivity, widen customer access, strengthen stakeholder engagement, and enhance financial inclusion. By offering accessible and cost-effective technological solutions—particularly to women-led enterprises, rural businesses, and micro-scale entrepreneurs—hybrid models support inclusive and sustainable local economic progress. The study also highlights the importance of supportive policy frameworks, digital literacy programs and institutional collaboration in ensuring successful implementation. The study concludes that a carefully planned integration of hybrid digital tools can empower SMEs, bridge technological gaps, and contribute to longterm community and economic development.

Keywords: *Hybrid digital Technologies, SMEs, Inclusive Economic Growth, Digital Transformation*

Policy Incentives, Market Dynamics and Sustainable Growth: An Empirical Study of Electric Vehicle Adoption in India

Dr. Renushree H K¹

¹Assistant professor, Department of Economics, Field Marshal K M Cariappa College, Madikeri, Mangalore University, Email: renusree08@gmail.com

Abstract

The global transition toward sustainable mobility has accelerated in response to climate change, energy security concerns, and environmental degradation. India, as one of the fastest-growing automobile markets, has introduced a strategic policy framework to promote electric vehicles (EVs) through fiscal incentives, industrial policy, and infrastructure development initiatives such as the FAME scheme. This study empirically examines the role of policy incentives and market dynamics in influencing EV adoption in India and evaluates their implications for sustainable economic growth. Using panel data for the period 2015–2025, the study analyses the determinants of EV adoption across Indian states. Fixed-effects and random-effects econometric models are employed to estimate the impact of policy subsidies, charging infrastructure, fuel prices, and income levels on EV sales. The results indicate that policy incentives and charging infrastructure are statistically significant drivers of EV adoption, with a 1% increase in subsidy allocation associated with approximately a 0.42% increase in EV sales. Higher fuel prices and rising per capita income also positively influence adoption rates. To evaluate sustainability outcomes, a second panel model examines the relationship between EV penetration and carbon intensity. The findings reveal that greater EV penetration significantly reduces carbon intensity, while renewable energy expansion further strengthens environmental benefits. However, economic growth independently increases emissions unless accompanied by clean energy integration. By integrating industrial policy, market competition, and environmental sustainability within a unified econometric framework, the study contributes to the literature on green technological transitions in emerging economies and provides policy insights for accelerating India's shift toward low-carbon mobility.

Keywords: *Electric Vehicles, Sustainable Growth, Industrial Policy, Carbon Intensity, India, Panel Data*

Role of Financial Literacy in Promoting Responsible Financial Behaviour in a Technology-Driven Economy

Dr. Shailashree K¹

¹Assistant Professor, Department of Commerce and Management, Field Marshal K.M.

Cariappa College, Madikeri-571201, Email: shylakunder26@gmail.com

ORCID ID: 0000-0003-1972-6728, Contact: 9742435885

Abstract

The rapid expansion of digital financial technologies has significantly transformed the financial landscape, influencing how individuals manage money, conduct transactions, and make investment decisions. Innovations such as mobile banking, digital wallets, online investment platforms, and other financial technology (FinTech) solutions have improved accessibility and efficiency in financial services. However, the increasing complexity of digital financial products also requires individuals to possess adequate financial knowledge and skills to make informed decisions. In this context, financial literacy plays a crucial role in shaping responsible financial behaviour. This study examines the role of financial literacy in promoting responsible financial behaviour in a technology-driven economy. It explores how financial knowledge, financial attitudes, and financial skills influence individuals' ability to manage personal finances, including budgeting, saving, investment planning, and responsible usage of digital financial services. The study also highlights the relationship between financial literacy and the effective adoption of digital financial tools while mitigating financial risks such as overspending, fraud, and poor financial decision-making. The findings emphasize that individuals with higher levels of financial literacy demonstrate better financial management practices, improved financial planning, and more responsible engagement with digital financial platforms. Furthermore, the study underscores the importance of strengthening financial education initiatives to enhance digital financial awareness and promote sustainable financial behaviour. Enhancing financial literacy is therefore essential for ensuring responsible financial participation and achieving inclusive and sustainable economic development in a technology-driven financial ecosystem.

Empowering Women Entrepreneurs in MSMEs Through AI Adoption

Dr S Mamatha¹, Dr. M Subramanyam²

¹Associate Professor, New Horizon College, Kasturinagar, Bengaluru, Karnataka, India,

Email: smamathaprakash@gmail.com, Mobile no. 9844670309

²Professor, School of Management, CMR University (Lakeside Campus) Bengaluru;

Karnataka, India, Email: drmutyala2013@gmail.com, Mobile no: 9632390819

Abstract

This study aims to evaluate the impact of Artificial Intelligence (AI) adoption on women-owned Micro, Small, and Medium Enterprises (MSMEs) in India. The research explores how AI can enhance business efficiency, competitiveness, and sustainability, focusing on the challenges women entrepreneurs face, including limited technology access and digital illiteracy. A quantitative approach was adopted, with surveys conducted among women entrepreneurs and employees in two districts in India. Data were collected through structured questionnaires, and statistical techniques like chi-square tests and regression analysis were used to assess AI's impact on business performance. While 68% of participants were aware of AI, only 42% used it in their businesses. Those who adopted AI saw improvements in customer relationships, operational efficiency, and decision-making. However, challenges such as digital skill gaps and inadequate training remain. The study focuses on two districts, limiting generalization to broader contexts. Further research can explore AI adoption across diverse regions and industries. To facilitate AI adoption, targeted digital literacy programs, affordable technological solutions, and supportive policies are needed to empower women entrepreneurs in MSMEs. AI adoption can contribute to gender equality by empowering women entrepreneurs, driving economic growth, and fostering job creation and social inclusion. This research contributes to understanding the role of AI in women-owned MSMEs in India, addressing the gap in literature concerning AI adoption challenges specific to women entrepreneurs.

Keywords: *Women Entrepreneurship, MSMEs, Artificial Intelligence, Technology Adoption, Innovation, Digital Literacy, Business Efficiency.*

Role of Emerging Technology AI: Sustainable, Responsible and Inclusive Business Growth

Dr. Praveen R. Shindhe¹

¹Associate Professor, Department of Commerce, Government First Grade College,
Dharwad.

Abstract:

Introduction: Artificial Intelligence (AI) has evolved from being just a tool for automation to becoming a major driver of sustainable, responsible, and inclusive business growth. AI in shaping business strategies is changing how companies approach growth, moving the focus from simply making profits to a more balanced approach used technological advancement.

Objective of study: This research explores how AI can help reduce energy use, manage resources more efficiently, and support efforts to cut waste and improve recycling.

Research methodology: To understand how AI supports sustainable, responsible, and inclusive business growth, a thorough approach was used. It involved collecting data to measure the extent of AI adoption, followed by qualitative analysis to explain how AI influences sustainability.

Data analysis: The use of AI and other new technologies is becoming more important for businesses that want to grow in a sustainable and inclusive way.

Finding: AI-powered drones and sensors analyze crops to help use water, pesticides, and fertilizers more wisely, which can lead to productivity increases of 30% to 50% in certain areas.

Recommendation: Use predictive analytics to manage supply chains, reduce waste, and improve energy use, especially in sectors like manufacturing, farming, and logistics.

Conclusion: AI is a powerful tool that can help companies grow in a sustainable, responsible, and fair way.

Keyword: *Role. Emerging. Technology. Artificial Intelligence. Sustainable, Responsible . Inclusive Business Growth*

Cybersecurity Threat Modeling and Privacy Preservation Mechanisms in Modern Digital Architecture Design

Dr. Rekha Sethi¹, Mr. Teekshith Kumar²

¹Principal- SBMJFGC, KGF

²Asst Prof, Dept. of Computer Science, SBMJFGC, KGF, Email:

teekshithtechu2001@gmail.com, 7624846537

Abstract

Cybersecurity threat modeling and privacy preservation mechanisms constitute foundational components of modern digital architecture design. As contemporary systems increasingly rely on distributed computing, cloud-native infrastructures, Internet of Things (IoT) ecosystems, and AI-driven analytics platforms, the attack surface has expanded significantly. Threat modeling provides a structured, systematic methodology for identifying, classifying, and mitigating potential security vulnerabilities across application, network, and infrastructure layers. It involves adversarial analysis, risk assessment matrices, attack tree construction, STRIDE/DREAD evaluation models, and continuous security validation within the Secure Software Development Life Cycle (SSDLC). Simultaneously, privacy preservation mechanisms ensure the protection of sensitive data against unauthorized disclosure, inference attacks, and regulatory non-compliance. Techniques such as end-to-end encryption, homomorphic encryption, differential privacy, zero-knowledge proofs, tokenization, and secure multi-party computation are increasingly integrated into digital architectures. These mechanisms align with global regulatory frameworks including GDPR, HIPAA, and data localization mandates. In modern architectures adopting microservices, containerization, and zero-trust principles, security and privacy must be embedded by design rather than retrofitted post-deployment. A defense-in-depth strategy combined with privacy-by-design principles enables resilient, scalable, and compliant digital ecosystems capable of withstanding sophisticated cyber threats while safeguarding user data integrity, confidentiality, and availability.

Keywords: *Cybersecurity Threat Modeling; Privacy-Preserving Cryptography; Zero-Trust Architecture; Secure Software Development Life Cycle (SSDLC); Differential Privacy; Risk Assessment Frameworks.*

Distraction Caused by 7-Inch Devices Among Youth: Impacts on Academic Performance and Attention.

Jagadeeshwari Durga C H¹

¹Assistant professor, Nagarjuna College of Management Studies, Chikkaballapura,

Email id: durgaishika04@gmail.com, Phone: 8867525316

Abstract

7-inch portable device such as smart phones and mini tablets have become an essential part of student daily life, as it changed the way they communicate, learn and access to information. However, their constant connectivity to social media notification to social media notifications gaming and entertainment application often create distractions that interfere with students' concentration. This study examines the use of devices affects academic performance and attention level among and college students. Using a survey of 110 students from urban and semi-urban areas, the research explores usage patterns, multitasking habits, and study behaviours. The finding reveals that students Who spend more time on recreational activities such as gaming, streaming and revealing through social media tend to struggle with concentration, maintain focus and completing task on time. While these devices are beneficial for academic research and group work, excessive and uncontrolled usage of devices often leads to procrastination and fragmented study habits, the study concludes that the problem is not the technology itself, but the way it is used promoting digital literacy and mindful device management can help students balance the advantages of technology in promoting their academic performance and sustained attention.

Key words: *7-inch portable devices, Digital distraction, Recreational, social media, Digital literacy, Technology.*

Social Media Influencer Credibility and Consumer Purchase Intention: A conceptual Framework.

Mrs. Geetha S. R.¹

¹Assistant Professor, Dept. of C & M, NCMS

9916428116,geethashanthamurthy247@gmail.com

Abstract:

The growing use of social media has changed the way consumers receive marketing messages, with social media influencers playing an important role in shaping buying decisions. Although influencer marketing is widely used by firms, existing studies provide limited explanation of how influencer credibility actually affects consumers' intention to purchase products. To address this gap, this paper proposes a conceptual framework explaining the relationship between social media influencer credibility and consumer purchase intention. Drawing on Source Credibility Theory, Social Influence Theory, and the Theory of Planned Behaviour, the study views influencer credibility as a combination of expertise, trustworthiness, and attractiveness. The proposed model suggests that influencer credibility builds consumer trust, which in turn shapes brand attitude and leads to purchase intention. By integrating existing literature and established theories, this conceptual study offers a clear explanation of the process through which influencers impact consumer behaviour. The paper contributes to consumer behaviour literature by presenting a structured and theory-based framework and offers useful insights for marketers in selecting credible influencers and designing effective influencer marketing strategies. The proposed model also provides a foundation for future empirical research.

Keywords: *Social media influencers, Influencer credibility, Consumer trust, Brand attitude, Purchase intention*

AI-Based Cyber Threat Detection for Secure Digital Transformation

Jeevitha V¹

¹Assistant Professor, Department of Computer Science

Nagarjuna College of Management Studies

Abstract:

The operational environment of contemporary enterprises has changed due to the quick uptake of digital technology. However, the cyber threat surface has greatly increased due to the growing reliance on linked digital platforms. Sophisticated cyberattacks like ransomware, phishing campaigns, and advanced persistent threats are frequently difficult for traditional security measures to identify. By providing automated threat detection, intelligent analysis, and adaptive response mechanisms, artificial intelligence (AI) has become a potent technology that can improve cybersecurity. The function of AI-driven cybersecurity frameworks in the context of digital transformation is examined in this study. The study suggests an intelligent cyber protection strategy that combines Transformer-based models for phishing detection, Gradient Boosting classifiers for attack categorization, and Autoencoders for anomaly detection. The design also uses Edge-AI analytics to monitor dispersed environments and Zero-Trust security concepts. Data preprocessing, feature engineering, model training, and performance assessment using cybersecurity datasets are all part of the methodology. When compared to conventional signature-based methods, experimental research shows increased detection accuracy, fewer false positives, and quicker threat response. Practical difficulties like data privacy, adversarial machine learning, and scalability problems in AI-based security systems are also covered in the study. The results show that cyber defence tactics in digital ecosystems can be greatly strengthened by combining AI models with contemporary security frameworks. The suggested framework offers a scalable strategy for businesses looking to assist digital transformation projects while strengthening resilience against changing cyberthreats.

Keywords: *Edge AI, Cybersecurity, Zero Trust Architecture, Artificial Intelligence, Anomaly Detection, and Digital Transformation*

Class Group–Based Public Key Cryptography: Algebraic Foundations, Algorithmic Design and Security Complexity Analysis

Jyothi L¹

¹Assistant Professor, Department of Mathematics, NCMS

Abstract:

Public key cryptography has long depended on number-theoretic problems like integer factorization and discrete logarithms. However, advances in algorithmic number theory and the emergence of quantum computing necessitate investigation into alternative mathematical foundations. This paper offers a thorough yet accessible examination of public key cryptography constructed over ideal class groups of imaginary quadratic fields. We systematically present the essential algebraic number theory concepts and demonstrate how class groups facilitate key exchange protocols. A detailed computational complexity analysis employing sub exponential L-notation is provided, along with practical parameter estimation for contemporary security requirements. We compare class group cryptography with RSA and elliptic curve cryptography, address post-quantum implications, and propose a hybrid cryptographic framework that integrates classical and algebraic hardness assumptions. This investigation establishes that class group–based cryptography presents a mathematically sophisticated and structurally distinctive alternative for advanced secure system architecture.

Keywords: *Class group cryptography, quadratic fields, algebraic number theory, discrete logarithm problem, sub exponential complexity, post-quantum cryptography*

The Impact of Emerging Technologies on Entrepreneurship and Startups

Prof.Kanika¹, Dr. Nalina.R²

¹Research Scholar, Sambhram Institute of Technology, Bangalore-560097

²Bangalore Institute of Technology, Bangalore-560004

Abstract:

Introduction:

The landscape of startups and entrepreneurship has changed dramatically as a result of the quick development of innovative technology. Innovations like big data analytics, cloud computing, blockchain, artificial intelligence, and the Internet of Things (IoT) are

changing how companies are founded, run, and grow. These technologies have enhanced market access, cut entry barriers, decreased operating costs, and made it possible for business owners to more precisely and efficiently create novel goods and services.

Startups are no longer limited by the conventional constraints of capital, infrastructure, or geography in the modern digital economy. New technologies offer strong instruments for global networking, automation, data-driven decision-making, and customer interaction.

DESIGN/METHODOLOGY APPROACH: A combination of surveys, case studies, and secondary data analysis to look into how startups and entrepreneurship are impacted by changing technology in both qualitative and quantitative ways.

RESEARCH LIMITATIONS: The study's sample size, geographic reach, and quickly changing technical trends are its limitations, which could have an impact on how broadly applicable the results are.

PRACTICAL IMPLICATIONS: The study offers startups and entrepreneurs practical advice on how to use cutting-edge technologies for creativity, expansion, and a competitive edge.

SOCIAL IMPLICATIONS: By utilizing cutting-edge technology, startups can boost employment opportunities, promote digital inclusivity, and stimulate societal innovation.

FINDINGS: While they also bring new risks and problems, emerging technologies greatly improve startup innovation, operational effectiveness, market reach, and competitive advantage.

ORIGINALITY/VALUE: This research highlights the ways in which emerging technologies are changing startups and entrepreneurship in a distinctive way, providing practical and strategic insights for innovation and growth.

KEYWORDS: *Internet of Things, entrepreneurship, startups, innovations, competitive advantage*

Employee Mental Health and It's Impact on Work Performance

Shazia khanum¹, Nikhitha Nayak²

¹Assistant professor, Research scholar

Alva's college (Dept of M.com(HRD), University college konajae, Mangalore(Dept of Commerce) Phone no : 95354 21017 Email :shazia249@gmail.com

²II M.COM (HRD) Alva's college (autonomous) Moodubidri Phone no : 8317431482

Email: nikhithanayak@gamil.com

Abstract:

Employee mental health has become an important issue in today's workplace because it directly affects work performance and organizational success. Mental health refers to how employees think, feel, and manage stress while performing their job. Good mental health helps employees stay motivated, productive, and satisfied with their work, while poor mental health can negatively affect both the individual and the organization. This study aims to identify the common mental health issues faced by employees, such as stress, anxiety, depression, burnout, and work pressure. These problems may arise due to heavy workload, long working hours, lack of support, job insecurity, and poor work-life balance. If not properly addressed, these issues can reduce employee confidence, concentration, and overall efficiency. The study also examines the impact of mental health on employee performance and helps to understand the importance of mental well-being in the workplace. Poor mental health can lead to low motivation, absenteeism, reduced productivity, poor decision-making, and increased employee turnover. On the other hand, employees with positive mental health show better teamwork, creativity, engagement, and higher job performance. These include creating a supportive work environment, providing employee wellness programs, offering counselling services, encouraging open communication, reducing excessive workload, and promoting work-life balance. The research is conducted using a survey method, where data is collected through a structured questionnaire from employees. The findings of the study highlight that improving employee mental health is essential for increasing productivity, ensuring job satisfaction, and achieving long-term organizational growth.

KEY WORDS: *Mental well-being, job satisfaction, anxiety, reduces motivation, maintaining work life balance.*

AI Powered Digital Libraries: Smarter Access to Global Knowledge

Dr. Murali. M¹, Mr. Lakshminarayana P²

¹Librarian Garden City University, Bengaluru. Email-id: muralimms446@gmail.com

ORCID ID-0000-0003-2620-8320 .

²Librarian Nagarjuna College of Management Studies Email-id:

lakshminarayanap2012@gmail.com

ORCID ID-0009-0003-6414-4046

Abstract

The fast growth of digital content has transformed the landscape of knowledge access, making traditional library models increasingly insufficient. Artificial Intelligent (AI) powered digital libraries influence AI technologies such as ML (Machine Learning), NLP (Natural Language Processing), and semantic search to enhance the association, retrieval, and personalization of data. These intelligent systems enable faster search, automated metadata tagging, personalized recommendations, & intelligent summarization, significantly improving user experience for researchers, students, and the general public. This article explores the architecture, applications, benefits, and challenges of AI powered digital libraries, highlighting their role in promoting equitable and efficient global knowledge access. The study also examines future trends, including conversational Artificial Intelligent librarians, predictive content discovery, and cross institutional knowledge networks, positioning AI driven libraries as essential tools in the developing digital knowledge ecosystem.

Keywords: *AI-powered Libraries, Digital Libraries, Machine Learning, Knowledge Access, Information Retrieval.*

Entrepreneurship and Human Resource Management: “A strategic Framework for Sustainable Organizational Growth”

Latha N¹

¹Assistant Professor, Nagarjuna College of Management Studies, Chikkaballapura

Abstract:

In today's fast-paced and highly competitive business landscape, there is a need for dynamic relation between the role of Entrepreneurship and (HRM) Human Resource Management. Traditionally the Entrepreneurship and (HRM) Human Resource Management are treated as separate domain, but in the increasing complex situations they both operate together for innovativeness and continuous sustainable growth. The functioning of an organization depends on policies of mutuality, which elicit commitment which in turn yield both economic development and greater human resource development. Many organizations have seen unprecedented growth through sustainable HRM, by integrating HR Philosophy, managing performance, talent management, HR metrics & analysis, rewards and benefits, workforce planning & staffing as well as learning and development initiatives. In this competitive world to percolate, organizations should imbibe the role HRM and Entrepreneurship in order to bring about organizational effectiveness. The failure of the entrepreneurs in using their human resources has been criticized as brilliant ambiguity, might lead to the ultimate demise of the organization. HRM is an important driver of entrepreneurship and is the most happening function as of now seeks to convert an adverse situation into an opportunity. Google, Netflix, Microsoft, Unilever are the organizations who are globally recognized for transforming HR practices, people analytics, talent management and employees experience. Strategic HRM, HR flexibility, analytics & innovations with Entrepreneurial Orientation leads to Innovation sustainability. Grounded in the Resource-Based View (RBV), Human Capital Theory (HCT), and Dynamic Capabilities Theory (DCT), this conceptual study examines the strategic integration of entrepreneurship and Human Resource Management (HRM) in fostering sustainable organizational growth.

Keywords: *HR philosophy, Separate domain, HR flexibility, Entrepreneurship, Innovation sustainability.*

Green Lending and Profitability: Assessing the Financial Impact of ESG Financing in Indian Banks

Madhuri N P¹, Thamotharan A²

¹Research Scholar, REVA Business School, REVA University, Bengaluru.

madhurinp.research@gmail.com (corresponding author)

²Associate Professor, REVA Business School, REVA University, Bengaluru.

Abstract:

The increasing materiality of climate-related risks and sustainability concerns has accelerated the integration of Environmental, Social, and Governance (ESG) principles within the banking sector. Green lending, as a core component of sustainable finance, represents a strategic shift in capital allocation toward environmentally sustainable sectors. This study examines the financial implications of green lending and ESG financing on the profitability of Indian banks. Drawing upon Stakeholder Theory, Risk Mitigation Theory, and the Sustainable Value Creation perspective, the study hypothesizes that ESG-integrated lending enhances financial performance by improving risk management, strengthening stakeholder trust, and promoting long-term value creation. The analysis is based on secondary panel data collected from annual and sustainability reports of selected public and private sector Indian banks over a multi-year period. Profitability is measured using Return on Assets (ROA), Return on Equity (ROE), and Net Interest Margin (NIM), while green lending intensity and ESG financing indicators serve as key explanatory variables. Control variables such as bank size, capital adequacy ratio, leverage, and asset quality are incorporated to account for structural heterogeneity across banks. A panel regression model is employed to evaluate the relationship between ESG financing and profitability. The findings indicate a positive and statistically significant association between green lending and bank profitability, suggesting that sustainable finance practices contribute to enhanced financial performance and improved portfolio quality. The results support the argument that ESG integration is not merely a compliance-driven activity but a strategic determinant of long-term profitability in the Indian banking sector. The study provides empirical evidence from an emerging economy and offers policy implications for regulators, financial institutions, and investors promoting sustainable banking practices.

Keywords: *Green Lending, ESG Financing, Sustainable Finance, Bank Profitability, Panel Data Analysis, Indian Banking Sector*

Beyond the Books: Role of AI Chatbots in Enhancing Student Learning and Productivity

Manoj M¹, V Deepika Nandini², Deepika B N³

^{1 2 3} Assistant Professor, Nagarjuna College of Management Studies, Chikkaballapura

+91 9019256598, mail id: manumanjunatha598@gmail.com

Abstract:

This study examines the impact of Artificial Intelligence (AI) chatbots on student's academic performance, productivity and timely completion of assignments. AI-powered tools such as Gemini, ChatGPT, and Grammarly are increasingly used by students to support writing, learning and academic content preparation. Using a convenience sampling method, primary data were collected from approximately 100 students through a structured questionnaire under a descriptive research design. The findings indicate that AI chatbots significantly enhance conceptual understanding, improve writing quality, reduce academic stress, and save time. Students increasingly view these tools as learning companions that support their academic tasks and efficiency. However, concerns regarding overdependence and academic integrity remain important considerations. The study concludes that the responsible and ethical integration of AI tools into academic environments can enrich the learning experience while strengthening student performance in a technology-driven educational landscape.

Key Words: *Artificial Intelligence, AI Chatbots, ChatGPT, Gemini, Grammarly, Academic Performance, Student Productivity, Conceptual Understanding, Writing Quality, Educational Technology, Assignment Completion, Learning Efficiency, Academic Integrity, Responsible AI Use.*

Impact of Mergers and Acquisition on Customer Satisfaction

Mr. Punyakesh Gowda S ¹, Dr. Manjunatha M K ²

¹ Research Scholar, Visvesvaraya Technological University, Centre for Postgraduate Studies, Mysuru, India

² Assistant Professor, Visvesvaraya Technological University, Centre for Postgraduate Studies, Mysuru, India

ABSTRACT:

This study examines the impact of mergers and acquisitions (M&A) on customer satisfaction, emphasizing how structural changes, service delivery adjustments, and shifts in brand perception influence the overall customer experience. The primary objective is to assess whether M&A activities enhance or reduce customer satisfaction and to identify the main factors shaping customer perceptions after a merger. The research relies on secondary data from industry reports, customer surveys, academic journals, and reputable sources such as Harvard Business Review, McKinsey, and Statista. It analyses major mergers in banking, telecommunications, and retail sectors, using indicators such as Net Promoter Score (NPS), customer retention rates, service quality metrics, and brand loyalty indices before and after M&A events. The findings reveal that customer satisfaction frequently declines in the short term following a merger due to service disruptions, unclear communication, and inconsistent service standards. Customers may experience confusion regarding new policies, systems, or brand identities, which can reduce trust and loyalty. However, when integration strategies are effectively managed, long-term satisfaction often improves. Organizations that prioritize transparent communication, maintain consistent service quality, and focus on customer-centred integration tend to recover and strengthen customer relationships. Improved operational efficiency, broader product offerings, and enhanced use of customer data further contribute to positive outcomes. The study supports the hypothesis that M&A activities significantly affect customer satisfaction, with results depending largely on post-merger integration quality. Businesses should therefore align financial objectives with strong customer experience management to ensure sustainable success.

Keywords: *Mergers and Acquisitions, Customer Satisfaction, Integration Strategy, Brand Perception, Service Quality.*

Responsible AI Governance Framework for Hybrid Work Environment

Charishma¹,

¹Faculty at Department of Commerce and Management, Field Marshal K.M Cariappa College, Madikeri

Abstract:

The growth in adoption of Artificial Intelligence (AI) in hybrid work environments—where employees operate across both remote and on-site settings—has transformed organizational processes, workforce management, and strategic decision-making. AI-powered tools are increasingly used for recruitment analytics, performance evaluation, workflow automation, employee monitoring, and predictive decision support. While these technologies enhance efficiency and innovation, they also raise significant ethical and governance concerns, including algorithmic bias, data privacy risks, lack of transparency, digital surveillance, and reduced human oversight. Existing AI governance models are largely generic and technology-centric, with limited focus on the socio-technical complexities of hybrid workplaces. This study proposes a comprehensive Responsible AI Governance Framework tailored specifically to hybrid work environments. The proposed framework is structured around five interrelated pillars: Ethical Design and Development, Data Governance and Privacy Protection, Transparency and Explainability, Accountability and Human Oversight, and Sustainability and Inclusivity Alignment. The framework integrates Environmental, Social, and Governance (ESG) principles into AI governance practices, emphasizing employee trust, fairness, and long-term organizational sustainability. By positioning responsible AI as a strategic enabler rather than merely a compliance mechanism, the study contributes to the emerging discourse on human-centric digital transformation aligned with Industry 5.0 principles. The findings provide both theoretical advancement and practical guidance for organizations seeking sustainable, responsible, and inclusive business growth in technology-driven hybrid work ecosystems.

Role of Strategic Human Resource Management in Fostering Entrepreneurial Growth and Innovation

Ms. Monisha G¹

¹Faculty at Department of Commerce and Management, Field Marshal K.M Cariappa College, Madikeri

Abstract:

In an increasingly dynamic and innovation-driven business environment, entrepreneurial success depends not only on innovative ideas and financial capital but also on the strategic management of human resources. This paper examines the role of Strategic Management of Human Resources (SMHR) in fostering entrepreneurial growth and innovation. Grounded in the Resource-Based view articulated by few experts, the study conceptualizes human capital as a valuable, rare and inimitable resource that can generate sustainable competitive advantage. The paper explores how a strategic HR practices – including talent acquisition, training and development, performance management, compensation systems and the cultivation of an innovation-oriented organizational culture – contribute to enhancing employees' ability, motivation and opportunity to innovate. The study adopts a conceptual approach, synthesizing existing literature on SHRM, entrepreneurship and innovation to develop an integrated framework linking strategic HR practices with entrepreneurial performance outcomes. It argues that startups and growth-oriented enterprises that align HR strategies with their long term business objectives are better positioned to foster creativity, knowledge sharing and adoptive capabilities. Furthermore the implementation of High-Performance Work Systems (HPWS) contributes to improved innovation outcomes and long term entrepreneurial performance. The finding highlights that SHMR acts as a strategic enabler of entrepreneurial sustainability by strengthening organizational ability and resilience in competitive markets. The paper offers managerial implications for entrepreneurs and policymakers, emphasizing the importance of embedding structured HR systems from the early stages of venture development. Overall the study contributes to the growing body of literature by demonstrating that strategic people management is central to achieving sustained entrepreneurial growth and innovation.

Role of Technology in Sustainable Growth of MSMEs

Nisarga G N¹, Dr. Kanthraju N P²

¹Faculty Member, Department of Commerce, Basaveshwara College, Nelemanagala

Email ID: nisargagn2599@gmail.com, Mob: 7022101257

²Assistant professor, School of Commerce, Finance and Accountancy, Department of Professional Studies, CHRIST University, Bangalore. Yashwanthpur Campus

E-Mail ID: kanthrajnp@christuniversity.in, Mob: 9980863023

Abstract:

Micro, small, and medium enterprises (MSMEs) play a significant role in economic development by generate employment, promoting innovation, and supporting balanced rational growth. Modern technology is not possible without help of technology, which is having a significant impact on the operations of micro, small and medium scale businesses. This study concentrates on the optimise resource utilization, minimize waste and make informed business decisions. The integration of digital technologies such as E-commerce, digital payments system, cloud computing, and data analytics enables MSMES to expand market reach, optimize resource utilization, and enhance the customer engagement, moreover the adoption of green technologies and energy- efficient production processes support environmental sustainability while reducing operational cost. Technology also strengthens financial inclusion by improving access to formal credit and government support schemes through digital platforms. Government initiatives and institutional support particularly through programs of the ministry of micro, small and medium enterprises and schemes such as Pradhan Mantri MUDRA yojana, providing loans, subsidies, and credit guarantee. Digital transformation encompasses the effective use of technologies across function such as strategy, marketing, manufacturing, sales, and promotion. This study examines the role of digital platforms and online marketing tools in enabling MSMEs to overcome geographical barriers and achieve wider market penetration. Sample size for this study 20 convenient sample method employed in this study. This study concludes that improving financial access, enhancing digital adoption and strengthening institutional support are essential for ensuring sustainable and inclusive growth of MSMES.

Digitalisation in Human Resource Management: Transforming Workforce Management in the Digital Economy

Dr. Pradeep R Bhandary¹

¹Assistant professor, Department of commerce, Field Marshal K M Cariappa College, Madikeri, Email: pradeeprbhandary@yahoo.com, mobile: 9844111667

Abstract

Digitalisation has significantly reshaped organizational operations across industries, particularly in the field of Human Resource Management (HRM). The integration of digital technologies such as artificial intelligence (AI), cloud computing, HR analytics, automation systems, and mobile platforms has transformed traditional HR practices into more strategic and data-driven processes. This study examines the concept of Digitalisation in HRM, its impact on key HR functions, and the opportunities and challenges associated with the adoption of digital HR technologies. Using a qualitative research approach based on secondary data from academic literature, the study analyzes how digital technologies improve recruitment, employee engagement, workforce analytics, and organizational efficiency. The findings indicate that digital HR systems enhance decision-making, reduce administrative workloads, and improve employee experience. However, challenges such as resistance to change, data security concerns, and lack of digital competencies remain barriers to successful implementation. The study concludes that Digitalisation is transforming HRM from an administrative function into a strategic partner that supports innovation, organizational agility, and sustainable business growth.

One Nation, One Tax? Measuring Revenue, Compliance and Market Effects Before and After GST Implementation in India

Prof Sheikh Nida Afreen A¹

¹Assistant Professor, Department of MBA, Sambhram Institute of Technology (SAIT),
nidaafreensheikh@gmail.com, 8105650879

Abstract:

The introduction of the Goods and Services Tax (GST) in July 2017 marked one of the most significant fiscal reforms in India's post-independence history, replacing a complex multi-layered indirect tax system with a unified structure. Framed under the vision of "One Nation, One Tax," GST aimed to enhance revenue efficiency, improve compliance, reduce cascading taxes, and create a common national market. This study employs a mixed-methodology approach to comparatively examine the pre-GST (2014–2017) and post-GST (2017–2026) eras in India. Quantitatively, the study analyzes secondary data on indirect tax collections, state-wise revenue performance, GST registrations, and sectoral growth trends using descriptive statistics, interrupted time-series analysis, and difference-in-differences estimation to identify structural shifts attributable to GST implementation. Qualitatively, semi-structured interviews with tax practitioners, MSME owners, and policy observers are conducted to assess compliance experiences, digital adaptation, and transitional challenges. The integration of quantitative trends with stakeholder perspectives enables a comprehensive evaluation of both macroeconomic and micro-level outcomes. Preliminary findings indicate a long-term upward trend in tax revenue mobilization and formalization, alongside short-term compliance burdens and sector-specific disparities. While GST has strengthened fiscal coordination between the Centre and States, variations in compliance capacity and digital readiness remain critical determinants of its effectiveness. The study contributes to international tax reform literature by providing empirical evidence from a large federal economy undergoing structural fiscal transformation, offering policy implications for developing economies pursuing harmonized indirect tax regimes.

Keywords: *Goods and Services Tax (GST), indirect tax reform, revenue mobilization, tax compliance, mixed-method research*

The Impact of Omnichannel Strategy on Customer Lifetime Value (CLV)

Raksha K.B¹

¹Lecturer of department of commerce, Field Marshal K.M Cariappa College, Madikeri

Abstract:

In today's changing technology people are more on to online shopping along with that there are few customer's who even prefer to purchase from stores. So most of the companies are moving on to omnichannel. Omnichannel strategy has a great impact on customer lifetime value. In this paper I have researched about the benefits, cause of omnichannel strategy on CLV. I have used secondary data from newspapers, magazines and from online. Since online stores has increased rapidly the need for omnichannel strategy is very important to sustain in the market. Key findings reveal that omnichannel customers average transaction values, and retention rates compared to single-channel customers. Our research provides actionable insights for businesses to optimize omnichannel investments and maximize CLV.

Keywords: *sustainability, customer lifetime value, growth.*

Analysis of UPI Transaction Growth and Fraud Detection Patterns: Evidence from NPCI and RBI Secondary Data

Rakshith Gowda K M¹, Mrs. Meena C²

¹Assistant Professor, Department of MBA, Nagarjuna College of Management studies, Chikkaballapura, rakshithgowda151@gmail.com, 9620332214

²Assistant Professor, Nagarjuna College of Management Studies, Chikkaballapura, meenaganendra1@gmail.com, Orchid I'd:- (<https://orcid.org/0000-0001-6997-7774>)

Abstract:

Unified Payments Interface (UPI) has emerged as India's dominant digital payment mechanism, driving unprecedented growth in transaction volumes and values. This study analyzes secondary data from the National Payments Corporation of India (NPCI) and the Reserve Bank of India (RBI) to examine UPI transaction trends and associated fraud patterns over a five-year period (FY 2020–FY 2025). Using monthly NPCI statistics and

annual RBI Payment System Indicators and fraud reports, the study applies time-series analysis to track growth rates, seasonal fluctuations, and fraud-to-transaction ratios. Findings indicate a consistent year-on-year growth exceeding 50% in transaction volumes, with peak seasonal spikes during festive months. However, digital fraud values have surged threefold in FY 2025, raising concerns over system vulnerabilities. The study concludes with policy recommendations for enhancing fraud detection frameworks, improving merchant KYC processes, and increasing consumer awareness.

Keywords: *Unified Payments Interface (UPI), Digital Payments, Fraud Trends, Transaction Volume, NPCI, RBI, Fraud Detection.*

Influence of Discount-Based Promotions on Consumer Purchase Decisions in Retail Stores.

²Professor, Sambhram institute of Technology, Amba Bhavani Temple Road
MS . Palya , Vidyaranyapura post, BANGALORE 560097

Phone No:- 9448034331

Phone No:-Krishmandya@gmail.com

Abstract:

In today's dynamic and highly competitive retail environment, discount-based promotions have emerged as a prominent strategy to attract customers and influence purchasing behavior. Retailers frequently adopt various promotional techniques such as price reductions, seasonal discounts, buy-one-get-one-free offers, coupons, loyalty discounts, and cashback schemes to enhance sales and increase customer footfall. This study aims to examine the influence of discount-based promotions on consumer purchase decisions in retail stores. The research focuses on understanding how these promotional strategies affect consumer perception, purchase intention, impulse buying behavior, and overall shopping experience. The study adopts a quantitative research design, relying primarily on structured questionnaires to collect data from consumers visiting retail

outlets. The research seeks to analyze the relationship between discount-oriented promotional strategies and consumer decision-making processes. Key variables considered include the attractiveness of discounts, perceived value, price sensitivity, and frequency of promotional exposure. Statistical tools are proposed to interpret the data and assess the extent to which discount-based promotions shape buying behavior. The objective of this research is to provide a comprehensive understanding of how pricing incentives influence consumer choices within organized retail settings. By examining consumer responses to promotional discounts, the study contributes to the broader field of retail marketing and consumer behavior. The findings of this research are expected to assist retailers and marketing professionals in designing effective promotional strategies that align with consumer expectations while maintaining competitive advantage in the retail sector. Furthermore, the study seeks to explore the psychological factors that drive consumers to respond positively to discount-based promotions in retail settings. The research also aims to provide insights that can support strategic decision-making in developing sustainable and customer-oriented promotional practices.

Keywords: *Discount-Based Promotions, Consumer Purchase Decisions, Retail Marketing, Sales Promotion, Buying Behavior*

Leveraging Data Analysis and Business Intelligence to Enhance STEM Based Commerce Education

Rekha M¹

¹Assistant Professor, Department of commerce, New Horizon College, Kasturinagar
9739016416

rayks114@gmail.com

ABSTRACT:

Education is the foundation of every successful society, and in today's rapidly changing world, the relevance of commerce education has grown more than ever. Unlike some academic disciplines that remain largely theoretical, commerce education directly connects with real-world practices. Commerce education is becoming more interdisciplinary. Students to thrive in a world where finance, business, and technology intersect, they need to be equipped with practical business skills and knowledge for careers in management, finance, and entrepreneurship. Evidence based decision making

has become the need for every business to stand in the competitive world. **Data** analytics involves extracting insights from structured and unstructured data using statistical methods, machine learning, and visualization, while Business Intelligence focuses on transforming raw data into actionable strategies for decision-making. In an era where data-driven decision-making defines industry competitiveness, integrating data analytics and business intelligence (BI) into STEM-based commerce education presents transformative opportunities for learning, curriculum development, and student achievement. This paper focuses on how data analytics and Business Intelligence, a STEM based commerce concept help improve learning outcomes, support teachers, guide administrative decisions, and enhance overall efficiency in today's education sector. This paper aims to study the role of Data Analytics and Business Intelligence in modern education systems and educators' readiness to adopt these tools to bring about a transformation in modern education systems.

Role of Emerging Technology: Blockchain Sustainable, Responsible and Inclusive Business Growth

Dr. Sanjota S Sirsangi ¹

¹Associate professor and HOD in Commerce Department, Government First Grade Collage and PG Center Dharwad

ABSTRACT:

Introduction: Emerging technologies, especially Blockchain or Distributed Ledger Technology, are becoming much more than just tools for the finance world. They are now playing a big role in helping businesses grow in a way that is good for the environment, ethical, and fair for everyone. The main features of Blockchain—like decentralization, transparency, immutability, and smart contracts—help companies move away from old and unclear ways of doing business. This new system builds trust because the data is secure and everything works smoothly without needing extra checks. To look at how blockchain's ability to track and record information clearly can help make supply chains more sustainable by promoting reuse, repair, and recycling. To study how blockchain can

help improve how companies are run, ensure fair treatment of workers, and increase transparency in supply chains, especially in sectors like textiles, food, and mining. A solid research plan to explore how blockchain can help with sustainable, responsible, and inclusive business growth should include many different parts. This means using both qualitative, quantitative, and sometimes a mix of both methods to fully understand the technology and how it affects society. Based on what's been studied in academia from 2020 to 2025, here's a well-organized plan for this research topic. Based on recent research and analysis, blockchain technology is acting as a transformative, "General-Purpose Technology" (GPT) that enhances Sustainable, Responsible, and Inclusive (SRI) business growth by replacing inefficient, centralized systems with decentralized, transparent, and immutable ledgers. Blockchain allows for a secure and clear way to track carbon emissions and create digital tokens for carbon credits. Smart contracts can automatically check if standards are met and release payments or rewards only when those conditions are satisfied. Use blockchain to keep a permanent record of how a product moves from its origin to the store. This increases trust from consumers, cuts down fraud, and helps recall products faster, like how Walmart and IBM's Food Trust reduced tracking time from days to seconds. Blockchain technology has evolved from being a niche financial tool into a major innovation that is reshaping how businesses operate in a sustainable, responsible, and inclusive way. By using a secure, decentralized, and transparent way to record information, blockchain helps organizations tackle serious and widespread issues—like unclear supply chains, unfair labor practices, and inefficient use of resources—that can block long-term, ethical growth.

Ph No: 9620903188, Email: apinapat@gitam.edu

Abstract:

Job satisfaction is a critical factor influencing employee motivation, productivity, and organizational effectiveness in the banking sector. This study presents a systematic literature review with a recent publication analysis to identify the major determinants of job satisfaction among bank employees. The review synthesizes findings from recent empirical and theoretical studies published between 2018 and 2024 in major academic databases such as Google Scholar, Scopus, Web of Science, and ScienceDirect. Using systematic search strategies and predefined inclusion criteria, relevant peer-reviewed studies were selected and analyzed to identify key research trends and determinants affecting job satisfaction in the banking industry. The analysis reveals that leadership style, organizational culture, compensation and reward systems, work environment, career development opportunities, and work-life balance are among the most frequently cited factors influencing job satisfaction among bank employees. Additionally, workplace stress, workload pressure, and job security significantly shape employees' attitudes toward their work. Recent studies also emphasize the growing influence of digital transformation and technological changes in banking operations on employees' job roles and satisfaction levels. Research trends indicate an increasing focus on employee well-being, organizational support, and human resource management practices to improve employee satisfaction and retention in the banking sector. Overall, the findings highlight that supportive leadership, fair compensation, and a positive organizational climate contribute significantly to improving job satisfaction and employee performance. This review provides valuable insights for researchers and banking institutions by identifying

research trends, key determinants, and gaps in the existing literature, thereby contributing to the development of effective human resource strategies aimed at enhancing employee well-being and organizational performance.

Entrepreneurship and Human Resource Management: Strategic Integration for Start-up Success in Emerging Economies

Shruthi K L¹,

¹Assistant Professor, Nagarjuna College of Management Studies, Chikkaballapur

Anil Kumar C N²

²Research Scholar, Annamalai University

Abstract:

Entrepreneurship has emerged as a key driver of innovation, economic growth, and employment generation in emerging economies. In India, the rapid expansion of the start-up ecosystem reflects rising entrepreneurial aspirations, digital transformation, and supportive government initiatives. Despite their contribution to regional development and technological advancement, many start-ups fail within their initial years. While market competition and financial constraints are commonly cited reasons, research indicates that internal organizational challenges-especially weak human resources management-also contribute significantly to early failure. Entrepreneurs often focus primarily on product development, funding, and customer acquisition, while overlooking the strategic role of people management in building sustainable enterprises. Human capital plays a central role in fostering innovation, productivity, and long-term organizational success. This study examines the strategic integration of entrepreneurship and human resource management (HRM) in emerging economies, with specific reference to India. The research adopts a descriptive and analytical design based on a comprehensive review of secondary sources, including policy documents, industry reports, and academic literature. The study analyses how key HRM practices such as recruitment and selection, training and development, performance management, employee engagement, leadership

development, and organizational culture contribute to innovation, employee commitment, operational efficiency, and start-up sustainability. The findings reveal that start-ups aligning HRM practices with their business strategy and entrepreneurial vision experience higher employee retention, improved coordination, enhanced productivity, and greater resilience in uncertain business environments. Early adoption of basic HR systems helps reduce workplace conflicts and supports smoother organizational growth, while people-centric practices foster a positive work culture and strengthen innovative capacity. The study also highlights major HR challenges faced by start-ups, including limited HR expertise, budget constraints, high employee turnover, and regulatory compliance issues. Overall, the findings emphasize that HRM should be viewed as a strategic capability rather than merely a support function. Policy-level support and ecosystem assistance are essential to encourage HRM adoption and ensure sustainable start-up growth in emerging economies.

UPI Adoption as a Tool for Financial Inclusion Among Rural Youths

Dr. Sumitra V Annigeri¹

¹Assistant Professor, Government First Grade College, Dharwad

Email: sumaviju2003@yahoo.com

Mob. No: 9880954159

Abstract:

This study examines the usage of Unified Payments Interface (UPI) among rural youth, focusing on awareness, adoption patterns, and factors influencing digital payment behavior. With the rapid expansion of smartphones, internet connectivity, and government initiatives promoting digital transactions, UPI has become an important financial tool even in rural areas. The study aims to analyze how frequently rural youth use UPI, the purposes for which it is used (such as mobile recharges, shopping, money transfers, and bill payments), and the level of trust and satisfaction associated with digital payment systems. The findings of the study are expected to provide insights into the role

of digital payment systems in promoting financial inclusion and shaping the financial behavior of rural youth.

Key words: *UPI, Digital Payments, Rural youths*

Technological Drivers of Digital Transformation in Agriculture: An Analytical Study

Mrs. Supriya N¹

¹Assistant professor, Dept. of computer science

Nagarjuna College of Management Studies Chikaballapur

Abstract:

The rapid advancement of digital technologies is reshaping the agricultural sector by enhancing productivity, efficiency, and sustainability. This study examines the influence of technological drivers on agricultural development, with particular focus on technology adoption, productivity improvement, investment growth, and infrastructural readiness. The analysis explores the increasing implementation of digital solutions such as IoT- based irrigation systems, drone-assisted crop monitoring, and precision farming techniques, highlighting a steady rise in their usage. The study evaluates the impact of these technologies on agricultural performance by assessing changes in yield levels, cost efficiency, and resource utilization. Findings indicate that digital integration contributes to improved output and optimized input management, thereby strengthening overall farm profitability. Additionally, trends in financial support and sectoral investment reflect growing confidence in Agri-tech innovations. The role of digital infrastructure, including connectivity and access to smart devices, is also considered as a critical enabler of technological transformation. The results suggest that technological drivers significantly enhance agricultural performance and long-term sustainability. The integration of digital tools also supports informed decision-making through real-time data analysis and predictive insights. Improved transparency in farm operations and better market linkages further strengthen the agricultural value chain. Continued emphasis on infrastructure development, skill enhancement, and supportive policies will be essential to accelerate the pace of digital transformation in agriculture.

Keywords: *Digital technologies, infrastructure readiness, technological drivers, IOT based irrigation system, precision farming.*

Digital Financial Literacy and Sustainable Financial Empowerment: Bridging Behavioral Biases in the FinTech Era

Prof. Vanishree G M¹, Dr. Buvaneshwari P²

¹Assistant Professor, Sambhram Institute of Technology, Bangalore - 97

Ph.No: 9980255400, Email: gmvanishree@gmail.com

²Professor, Global Academy of Technology, Bangalore, Ph.No: 8971928245

Email: pbuvaneshwari@gmail.com

Abstract:

Financial technology's (Fin-Tech) quick development has changed how people manage their finances, increased access to digital financial services, and sped up financial inclusion. Nevertheless, access by itself does not guarantee long-term financial empowerment. Financial decision-making is still influenced by a lack of digital financial literacy and enduring behavioural biases, which may jeopardize responsible involvement in digital financial ecosystems. This study conceptually investigates how, in the Fin-Tech era, digital financial literacy might promote long-term financial empowerment by reducing behavioural biases. An integrated conceptual framework connecting digital financial literacy (digital payments competence, cyber security awareness, and digital investment knowledge) with sustainable financial empowerment outcomes like long-term financial planning, responsible borrowing, diversified investing, and risk management is proposed by the study, which is based on behavioural finance theory and financial capability theory. A number of behavioural biases are proposed as mediating processes that could affect this relationship, including loss aversion, herding behaviour, overconfidence, and present bias. The study uses a quantitative research design and gathers primary data from digital financial platform users. It is suggested that structural equation modelling (SEM), be used to investigate the potential connections and evaluate the mediating function of behavioural biases. The expected findings aim to demonstrate that enhanced digital financial literacy reduces irrational financial tendencies and strengthens sustainable financial behaviours. This study adds to the conversation on technology-driven inclusive growth by combining viewpoints on sustainability,

behavioural finance, and digital literacy. It is anticipated that the results will help policymakers, financial educators, and Fin-Tech companies create focused digital literacy initiatives that support equitable, sustainable, and responsible financial empowerment in developing nations.

Keywords: *Digital Financial Literacy; Sustainable Financial Empowerment; Behavioural Biases; Fin-Tech; Inclusive Growth*

Examining the Influence of Environmental Awareness and Social Image on Consumers' Willingness to Purchase Eco-Friendly Products"

Shivakumar M M^[1], Chandu B^[2], Ambika V M^[3]

^[1] ^[2] ^[3] Assistant professor, Nagarjuna College of Management Studies,
Chikkaballapura.

shivakumarmm75@gmail.com, +91 7411063457

Abstract

This study investigates the influence of environmental awareness and social image on consumers' willingness to purchase eco-friendly products. In the context of increasing environmental concerns and the growing need for sustainable consumption, understanding the determinants of green purchasing behavior has become essential. The study is based on both primary and secondary data. Primary data were collected from 150 respondents through a structured questionnaire using the convenience sampling method. Statistical analysis was performed using SPSS software to examine the relationships among the variables. The findings of the study reveal the extent to which environmental awareness influences consumers' willingness to pay and purchase eco-friendly products. Additionally, the study analyzes the role of social image in shaping purchasing decisions. The results contribute to the existing literature on green consumer behavior and provide insights for marketers and policymakers aiming to promote sustainable consumption practices.

Key words: *Eco-friendly products, Environmental awareness, Social image, Sustainable consumption practices, Consumers' willingness.*

Impact Of Digital Transformation on HRM Practices - With Special Reference to Service and Manufacturing Industries in Mangalore Region

Apoorva Shetty¹

¹2nd MCOM (HRD), Alva's College (Autonomous), Moodubidire,
shettyapoorva381@gmail.com, 9008655369

Abstract:

Digital transformation has emerged as a strategic driver of organizational change, significantly influencing Human Resource Management practices across industries. This Digital transformation has fundamentally reshaped the way organizations operate, compete, and create value in an increasingly technology-driven environment. It explores how digital platforms facilitate remote work management, virtual collaboration, and real-time communication between employees and management. It enables the HR departments to move beyond administrative tasks and play a more strategic role in organizational growth. It empowers HR professionals to make informed decisions, foster innovation, and align human capital strategies with overall business objectives in the digital age. Moreover, digital transformation enhances the employee experience by promoting self-service portals, mobile HR applications, virtual training programs, and digital communication platforms. These technologies empower employees to access information easily and engage more effectively with their organizations.

The purpose of this empirical paper is to study and understand what are the tools and platforms used in the HR practices and what are the issues are faced by the HR in the process of digital transformation . This also highlights the impact of digital transformation on performance of HRD functions. The study also emphasizes the importance of continuous learning and upskilling initiatives to equip HR professionals with the necessary digital competencies. The study is mainly based on both primary and secondary data , Primary data will be collected by personal opinion and through survey method which involve administering the questionnaire to the HR's of Service and Manufacturing sector industries in Mangalore Region.

Key Words: *Digital Transformation, HRM, Service Industry, Manufacturing Industry, Technology-driven.*

Applications, Challenges, and Future Directions of Business Intelligence and Analytics in Modern Organizations

Aruna C¹, Darshan D S²

¹Assistant Professor, Nagarjuna College of Management Studies, Chikkaballapura ,
arunakeshava7@gmail.com

²Assistant Professor, Nagarjuna College of Management Studies,
Chikkaballapura, Darshansriram2001@gmail.com

Abstract

In the modern digital era, organizations generate massive volumes of data through business operations, online transactions, customer interactions, and digital platforms. Managing and analyzing this data has become essential for organizations seeking to make effective data-driven decisions and improve overall business performance. Business Intelligence (BI) and analytics provide tools and technologies that enable organizations to collect, process, analyze, and visualize large datasets. Through techniques such as data warehousing, data mining, and interactive dashboards, BI systems transform raw data into meaningful insights that support strategic decision-making and operational efficiency. Modern BI tools such as Microsoft Power BI, Tableau, and Qlik help organizations monitor business activities, identify patterns, and evaluate performance in real time. BI applications are widely used in sectors such as retail, finance, marketing, and healthcare for tasks like sales forecasting, fraud detection, campaign analysis, and patient data management. However, there is still a significant research gap in the integration of advanced technologies such as artificial intelligence for automated decision-making, efficient real-time data processing, and effective data integration across multiple sources. Additionally, issues related to data quality, system complexity, and high implementation costs limit the adoption of BI systems, especially among small and medium-sized enterprises. This study examines the applications of BI and analytics in modern organizations while highlighting research gaps and opportunities for developing more intelligent, scalable, and secure BI systems.

Keywords: *Business Intelligence (BI), Data Analytics, Data-Driven Decision Making, Data Visualization, Business Intelligence Tools, Big Data Analytics, Real-Time Data Processing, Artificial Intelligence in BI, Organizational Performance, Data Integration.*

Automatic Speech Recognition for Indic Languages: A Comprehensive Literature Review (2023-2026)

Ms. Chandana T¹, Dr. Anand Konjengbam²

¹Phd Scholar, IIT Dharwad,

²Assistant Professor, IIT Dharwad

Abstract

The evolution of Automatic Speech Recognition (ASR) for Indic languages between 2023 and 2026 marks a decisive transition from fragmented, language-specific efforts toward large-scale, multilingual, and foundation-model–driven paradigms. This literature review critically examines approximately 30 recent studies that collectively address the structural, linguistic, and computational complexities of building ASR systems across India’s 22 constitutionally recognized languages spanning the Indo-Aryan and Dravidian families. A defining shift in this period is the emergence of expansive, geographically diverse datasets such as IndicVoices (7,348 hours across 22 languages) and Vistaar (10,736 hours across 12 languages), which move beyond read speech toward spontaneous and conversational audio. In parallel, the adaptation of foundation architectures—most notably Whisper and Wav2Vec2—has reconfigured the performance landscape, with multilingual self-supervised pretraining delivering relative Word Error Rate (WER) reductions of up to 36% over earlier baselines. Techniques such as Common Label Set representations, multilingual transfer learning, prompt tuning, and multi-task optimization have demonstrated that cross-lingual parameter sharing is not merely efficient but structurally advantageous for low-resource Indic languages. Yet, beneath these quantitative gains lies a persistent asymmetry. Performance remains uneven across dialectal varieties, spontaneous speech contexts, and code-switching environments, where linguistic fluidity destabilizes conventional acoustic–language modeling assumptions. Domain adaptation for healthcare, education, and conversational AI remains underdeveloped, while evaluation frameworks continue to privilege aggregate WER over fairness, robustness, and application-specific reliability. This review argues that the next phase of Indic ASR research must move beyond scaling datasets and parameters toward dialect-aware modeling, efficient streaming architectures,

sociolinguistic robustness, and domain-sensitive evaluation. Bridging these gaps is essential if ASR is to evolve from benchmark-optimized systems into inclusive, deployment-ready technologies capable of serving India's deeply heterogeneous linguistic reality.

Keywords: *Indic Languages, Multilingual ASR, Foundation Models, Dialectal Variation, Code-Switching*

Technology-Enabled Retail Intelligence: A Study on AI and AR Adoption for Sustainable Consumer Decision Support

Mr. Charan N S¹, Dr. Lakshminarayana K²

ABSTRACT

The trends of implementing Artificial Intelligence (AI) and Augmented Reality (AR) in retail intelligence are changing the future of sustainable consumer decision-making. With more and more consumers worldwide focusing on environmentally-friendly products, retailers will find it difficult to offer clear and customized information that will enable them to make informed decisions. This paper discusses how AI and AR can be adopted as drivers of sustainable consumerism based on the theoretical models of Technology Acceptance Model, the Diffusion of Innovations Theory and the Triple Bottom Line. The study has provided the identification of several trends such as the integration of an omnichannel, AI sustainability-driven in the supply chain, hyper-personalization, and social-commerce. Nevertheless, the problem of using these technologies includes the concern of personal data privacy, the bias of algorithms, dependence on devices, and ethical challenges. This is due to some challenges such as high implementation cost,

quality issues of the data, resistance of the workforce and consumer skepticism. Nevertheless, regardless of these obstacles, the importance of this study is that it could contribute to systemic change because it would enable consumers, make retailers more competitive, reduce environmental effects and promoted innovation. The scope includes the empirical studies of the barriers to and facilitators of adoption within both developed and new retail markets, with a consumer-facing application oriented scope. The stated research will offer practical suggestions to the policymakers, retailers, and technologists to initiate the future usage of AI and AR in sustainable retail intelligence.

Role of Emerging Technology Fintech Sustainable, Responsible and Inclusive Business Growth

Dr. Iranna Bhustali¹

¹Associate Professor Department of Commerce Government First Grade College and
P.G Center Dharwad

ABSTRACT:

Introduction: Financial technology, or FinTech, has grown from being a small player in the payment industry into a major part of the modern economy. It plays a big role in helping businesses grow in a way that's sustainable, responsible, and inclusive. By using new technologies like artificial intelligence, machine learning, blockchain, and big data, FinTech is changing how financial services are made, given out, and used. This change aligns with global efforts to make the world more sustainable. It supports several United Nations Sustainable Development Goals, especially those related to good jobs and economic growth (SDG 8), innovation and infrastructure (SDG 9), and reducing inequality (SDG 10). Objective of study: Studying how digital tools such as lending platforms and payment systems support small and medium businesses, especially in poorer areas, by making it easier to get loans and manage money. Exploring how digital tools can lower the environmental impact of financial services and use resources more efficiently.

Research methodology: Research methodology for studying how emerging technology,

especially FinTech, helps businesses grow in a sustainable, responsible, and inclusive way usually combines both quantitative and qualitative methods. This mixed-methods approach uses numbers and data like panel data and survey results, along with in-depth methods such as case studies and reviews of existing literature. The aim is to link digital financial tools, like blockchain, AI, and mobile payment systems, with specific environmental, social, and governance (ESG) results and the United Nations Sustainable Development Goals (SDGs).

Data analysis: Emerging fintech technologies such as AI, blockchain, and big data are important in helping businesses grow in a way that is sustainable, responsible, and inclusive. These technologies improve people's understanding of money and make financial services easier to get and more affordable. The data shows that fintech reduces costs and takes away obstacles, allowing more people to take part in the economy in a fair way. It also helps support green finance and makes financial activities more transparent.

Finding: Recent studies show that new technologies in the financial technology sector are important for helping businesses grow in a way that is sustainable, responsible, and inclusive. These technologies are changing old financial systems so they are easier to use, work more efficiently, and are more open and clear. Key innovations like Artificial Intelligence (AI), blockchain, and mobile platforms are helping people who don't have bank accounts access financial services. They are also supporting investments in the environment and improving how companies handle environmental, social, and governance (ESG) factors.

Recommendation: Using blockchain technology to break down real-world assets like green bonds into digital tokens makes it easier to track and fund environmental projects in a transparent and efficient way. Preparing for future cyber threats by updating security systems to protect data from attacks that could break traditional encryption methods.

Conclusion: Emerging technologies and fintech are significantly changing the financial world. They are helping businesses move away from old, expensive methods to more efficient and environmentally friendly approaches.

Digital Transformation in Human Resource Management: Challenges, Opportunities, and Strategic Outcomes

Dr. Smitha. N. S¹, Dr. Mahesh. N. V²

¹Associate Professor, Sambhram Academy of Management Studies, Bangalore

smithans12@gmail.com, 9008153689

²Assistant Professor Christ Academy Institute for Advanced Studies, Bangalore

Abstract

Digital transformation has emerged as a strategic imperative in Human Resource Management (HRM), reshaping traditional HR practices, boosting operational efficiency, and enhancing employee experience. This research examines how digital technologies influence HR functions such as recruitment, training, performance evaluation, and employee engagement. Drawing upon both primary and secondary data, the study explores the factors that support successful digital adoption in HRM and identifies gaps between technological potential and implementation outcomes. Findings reveal that digital HR tools enhance decision-making quality, save time, and improve accuracy, but challenges remain in change management, skills gaps, and data security. Recommendations are offered to HR practitioners and policymakers for enhancing digital integration.

Banking Sector's Role in Climate Finance

Dr Girish Kumar H V¹, Ms Deepika B V²

¹Associate Professor, Department of MBA, Nagarjuna College of Management Studies,

Chikkaballapura-562101, girishkumar.hv@ncms.co.in

²Assistant Professor, Department of Commerce, Nagarjuna College of Management

Studies, Chikkaballapura-562101, deepika.bv@ncms.co.in

Abstract

Climate change has emerged as one of the most critical global challenges, requiring substantial financial resources to support mitigation and adaptation initiatives. Climate

finance refers to the flow of funds directed toward projects that reduce greenhouse gas emissions, promote renewable energy, enhance energy efficiency, and strengthen climate resilience. In this context, the banking sector plays a significant role as a financial intermediary by mobilizing, allocating, and managing financial resources for climate-related investments. This examines the role of banks in promoting climate finance and supporting the transition toward a low-carbon and sustainable economy. The study highlights the various strategies adopted by banks to facilitate climate finance, including green lending, financing renewable energy projects, supporting sustainable agriculture and investing in energy-efficient technologies. Financial instruments such as green bonds, green loans, sustainability-linked loans and blended finance mechanisms have become important tools for channelling investments into environmentally sustainable projects. Banks also contribute by integrating Environmental, Social and Governance (ESG) principles into their lending practices, conducting climate risk assessments and supporting carbon markets and sustainable financial products. The research discusses the growing role of banks in financing renewable energy sources such as solar, wind, hydro and geothermal energy as well as promoting sustainable agricultural practices and green infrastructure development. By providing financial support and technical expertise, banks help businesses and governments implement climate-friendly projects that contribute to long-term environmental sustainability and economic growth. However, the study also identifies key challenges faced by banks in climate finance, including regulatory uncertainty, the conflict between short-term profitability and long-term sustainability goals, and the risk of greenwashing in sustainability claims. The findings suggest that the banking sector is a crucial driver in accelerating climate finance and facilitating the global transition toward a climate-resilient economy. Strengthening policy frameworks, improving transparency and enhancing collaboration among governments, financial institutions and international organizations will further enhance the effectiveness of climate finance initiatives.

Keywords: *Climate Finance, Green Banking, Renewable Energy Financing, Sustainable Finance, ESG Integration.*

A Study on the Relationship Between Talent Management and Succession Planning in Organizations

Dr. Kavitha C¹, Ms. Triveni N²

¹Assistant Professor, Commerce and Management Department, Nagarjuna College of Management Studies, Chickballapura, vbskavi7@gmail.com

²Assistant Professor, Dept. of MBA, Nagarjuna College of Management Studies, Chickballapura, trivenin6684@gmail.com

Abstract

Introduction: Talent management is a long-term, strategic organizational strategy for keeping high-potential employees in order to accomplish corporate objectives. Succession planning is necessary for an organization's talent management. The process of identifying and training an organization's personnel as well as mapping important positions and competencies within it is known as succession planning. For businesses looking to maintain long-term competitiveness and leadership continuity, talent management and succession planning have become essential strategic strategies.

Objectives: The study's objectives are to understand the importance of talent management techniques in succession planning and the connection between talent management and successful succession planning within a company.

Research Methodology: In order to explore the connection between talent management and successful succession planning, this study gathers primary data from 80 employees who work for various organizations using a standardized questionnaire.

Findings: The findings of the study are effective talent management significantly contributes to the development of strong and effective succession planning which enhances the organizational performance.

Limitations: The study's disadvantage is that, due to time constraints, data was only gathered from a small number of samples by personnel at various levels in various firms.

Conclusion: In conclusion, it emphasizes the strong and efficient succession planning, which improves organizational performance, is greatly aided by efficient personnel management and talent management in organization.

Keywords: *Talent Management, Succession Planning, Organizational Performance.*

Role of UPI in Industry 6.0 as a Sustainable Business Practice

Dr. Gayathri Devi A¹, Mrs. Kshithija Patel²

¹Professor, Department of Commerce, FMKMC College, Madikeri,

gayathridevi73@gmail.com, 9448647229

²Research Scholar, Department of Commerce FMKMC College, Madikeri,

kshithijapatel0895@gmail.com, 944882173

Abstract

India's digital payments revolution has been powered largely by UPI. From street vendors and small shops to multinational retailers and online platforms, Unified Payments Interface has transformed how money moves in the country. As we move into 2026 and beyond, UPI is no longer just a convenient alternative to cash. It has become the backbone of India's retail payments ecosystem. Industry 6.0 is characterized by a paradigm shift towards adaptive, resilient, on-the-fly, and customer-oriented manufacturing solutions. It is not an incremental step to Industry 5.0, but a transformative approach that synergizes the physical, digital, and biological spheres. It envisions an industrial ecosystem where smart factories are not isolated entities but are part of a larger, interconnected network of supply chains, consumer needs, and sustainable practices. The benefits of digital payments system were observed in full glory during the COVID-19 pandemic when Unified Payment Interface (UPI) served as critical lifeline especially for small and micro merchants. In early 2026, India's UPI continues to dominate digital payments, with January 2026 witnessing over 21.7 billion transactions worth ₹28.33 lakh crore. The study has been conducted to analyse and understand the awareness level of under graduate and post graduate students of Dharwad Municipal Corporation Area regarding various Unified Payment Interface that has been introduced by Government of India to make Indian economy "Faceless, Cashless and Paperless". For the purpose of the study, both primary and secondary data has been considered. The primary data has been collected through structured questionnaire filled through interview and secondary data through internet sources. The study also makes an attempt to suggest the measures that can be implemented to make these digital platforms more easily accessible to general public.

Key words: *Digitalisation, Unified Payment Interface (UPI), Cashless-Economy, Industry 6.0, Digital India*

A Study on Role of Training and Development in Improving Employee Effectiveness in Educational Institutions

Mrs. Latha K S¹, Mrs. Latha N²

¹Assistant Professor, Nagarjuna College of Management Studies, Chickaballapur,
lathaks1987@gmail.com, 8497867309

²Assistant Professor, Nagarjuna College of Management Studies, Chickaballapur.
kavya.latha.n@gmail.com, Phone: 9740338685

Abstract

Training and development play an important role in improving employee effectiveness in educational institutions where continuous learning and skill enhancement are necessary for maintaining quality teaching and administrative performance. This study focus on understanding how structured training and development programs support employees in improving their knowledge, skills and overall work efficiency. The study examines various training initiatives provided to employees such as orientation programs, workshops, seminars, faculty development programs and skill based training activities designed to meet changing academic and organizational requirement. It also assesses employee's perceptions towards these programs by analyzing their satisfaction levels, usefulness and relevance to their daily work responsibilities. The study analyzes the impact of training and development programs on employee effectiveness by evaluating and improvements in job performance, confidence, productivity, work quality, communication skills and adapt new technologies and workplace changes. The research also identifies key factors influencing the success of training programs including management support, proper planning and availability of resources suitable training methods, employee participation and a supportive work environment. The study is based on primary data collected from employees along with supporting secondary sources such as books and research articles. The findings shows that continuous and properly designed training programs help employees develop their skills, build confidence and carry out their responsibilities more effectively. The study concludes that strong training and development practices play a vital role in enhancing employee effectiveness and promoting the overall growth and quality performance of educational institutions.

Key Words: *Performance, Improvement, Continuous Learning, Employee Competency*

An Empirical Study on Customer Satisfaction with Paisabazaar's Financial Services in India

Mrs. Meena C¹, Rakshith Gowda K M²

¹Assistant Professor, Nagarjuna College of Management Studies, Chikballapur
meenaganendra1@gmail.com, Orchid I'd:- (<https://orcid.org/0000-0001-6997-7774>),

²Assistant Professor, Department of MBA, Nagarjuna College of Management studies,
Chikballapur, rakshithgowda151@gmail.com ,9620332214

Abstract

India's digital financial comparison platforms have grown at a remarkable pace, reshaping the ways in which ordinary consumers identify and obtain financial products. Yet despite widespread platform adoption, scholarly attention to what actually satisfies users of online financial aggregators particularly across occupationally varied populations has remained sparse. Drawing on survey responses from 425 Paisabazaar users stratified across salaried employees, self-employed professionals, MSME owners, and homemakers recruited from rural and urban settings across India, this paper develops and tests a platform-oriented service model that treats Platform Usability, Information Quality, Data Security, Convenience, and Cost Efficiency as simultaneous determinants of customer satisfaction. Structural Equation Modelling (SEM) was applied to assess construct relationships. Results identify Platform Usability and Information Quality as the most consequential satisfaction drivers, though Data Security, Convenience, and Cost Efficiency each contribute meaningfully as well. By situating these findings within the specific context of a multi-product financial aggregator serving a heterogeneous user base, the study extends digital financial services scholarship and provides actionable guidance for FinTech designers, partner institutions, and policymakers working to improve digital financial service delivery across India.

Keywords: *Customer satisfaction, Digital financial services, FinTech platforms, Online financial aggregators, Paisabazaar, SEM*

A Study on Operation and Claim Procedure of Motor Vehicle Insurance of Maruthi Insurance with Respect to Chikkaballpur District

Ms Navya Lakshmi .N¹

Assistant Professor, Nagarjuna College Of Management And Science

Department Of Commerce And Management, Contact No: 9606732901, Email id:

Navyalakshmin1995@Gmail.Com

Abstract:

Nowadays we know how Motor insurance is playing an important role when it comes to providing insurance to vehicles and various claim procedure that has been implemented by motor insurance act, but when we examine present insurance policy many of the customers are not aware about the procedure of claims and they are facing difficult to opt insurance policy when it comes to Maruthi insurance because Maruthi insurance has tied by with more than 19 insurance companies the claim procedure and adopting add on covers will vary from one insurance company to another insurance company , and when it comes to claim customers are not satisfied with the spare parts which are replaced by the dealers of Maruthi insurance.

Keywords: *Maruthi insurance, claim procedure, add on covers.*

Impact Of Digital Payment Systems on Financial Inclusion in India: A Study with Special Reference to UPI

Nefisath Mishriya M A¹

¹Student, M.Com, Field Marshal K.M Cariappa College Madikeri, Affiliated to Kodagu University

Email: mishriyamishriya71@gmail.com, Mobile: 9353839209.

Abstract:

The rapid expansion of digital payment systems has significantly transformed the financial landscape of India in recent years. Among the various digital payment platforms, the Unified Payments Interface (UPI) has emerged as a revolutionary instrument promoting financial inclusion and facilitating seamless digital transactions

across both urban and rural areas. This study examines the impact of digital payment systems, particularly UPI, on enhancing financial inclusion in India. The research is based on secondary data collected from reports of the Reserve Bank of India (RBI), publications of National Payments Corporation of India (NPCI) and relevant academic journals. The analysis reveals a substantial increase in digital transaction, improved accessibility to formal financial services and greater participation of rural and small-scale businesses in the organized financial system. However, challenges such as digital illiteracy, inadequate internet connectivity and cybersecurity concerns continue to hinder widespread adoption. The study concludes that digital payment platforms like UPI play a crucial role in fostering sustainable and inclusive economic growth in India. Nevertheless, continued policy support, infrastructure development and digital awareness initiatives are essential to ensure long-term and equitable financial inclusion.

Keywords: *Digital Payments, UPI, Financial Inclusion, Digital Banking, Sustainable Economic Growth.*

Transforming Workplace Culture through Diversity, Equity, and Inclusion Frameworks

Pavan Kumar P R¹

¹Lecturer, Field Marshal K M Cariappa College, Madikeri, Email ID:

pavankumarprkodagu2@gmail.com

Contact Details: 8073466443.

Abstract:

Diversity, Equity, and Inclusion (DEI) have become important priorities for modern organisations. DEI is now regarded not merely as ethical commitment but as strategic determinant of competitive advantage. Workplaces today include people from different backgrounds, race, cultures, ethnicities, genders, abilities, generations, religions, sexual orientations, and life experiences. While diversity brings creativity, knowledge, productivity, new ideas and perspectives, organisations must also ensure fairness and create an environment where everyone feels respected, valued and supported regardless of race, gender, colour, age, ethnicity. However, many organisations struggle to move beyond basic policies and create real inclusion in everyday work practices. This paper examines how workplace culture can be transformed through structured DEI frameworks.

The study explains the meaning and importance of diversity, equity, and inclusion in organisational settings. It discusses practical ways to implement DEI, such as leadership commitment, fair recruitment and promotion practices, employee training programs, and equal opportunities for career growth. The role of DEI training, including unconscious bias training and inclusive leadership development, is also highlighted as a tool for improving awareness and behaviour at all levels of the organisation. The paper outlines key benefits of DEI, such as higher employee engagement, better teamwork, stronger innovation, improved decision-making, and enhanced organisational reputation. At the same time, it recognises common challenges like resistance to change, lack of representation in leadership, unconscious bias, and difficulty in measuring progress. Strategies to overcome these challenges are also discussed. This study is conceptual in nature and is based on secondary sources. It shows that when DEI is treated as a core business priority rather than a simple policy requirement, it can help build a positive workplace culture and improve overall organisational performance.

Keywords: *Work place Culture, diversity, equity, inclusion frameworks.*

A Study on Transformational Leadership and Employee Well-being: The Mediating Role of Psychological Empowerment

Dr. Gayatri Devi A¹, Shazia Khanum², Prerana³

¹Professor, Dept of Commerce & Management, FMKMC College Kodagu, Madikeri,
India

²Assistant Professor, Dept Of M.Com(HRD)Alva's College & Research Scholar,

shazia249@gmail.com

³II M.Com (HRD), Alva's College (Autonomous) Moodubidire. Dakshina Kannada
prerana242@gmail.com

Abstract:

In today's dynamic organizational environment, employee well-being has emerged as a key factor for sustainable organizational success. Organizations increasingly realize that employees who experience supportive leadership and empowerment are more motivated, productive, and committed to their work. Leadership therefore plays a crucial role in

shaping employees' workplace experiences and influencing their psychological state and overall well-being.

Among various leadership approaches, transformational leadership has gained considerable attention because of its ability to inspire employees, encourage innovation, and create a shared vision within organizations. Leaders who adopt this style motivate employees to perform beyond expectations through inspiration, intellectual stimulation, and individualized consideration.

Psychological empowerment is another important factor that contributes to employee motivation and satisfaction at work. It reflects employees' perception of meaning, competence, autonomy, and impact in their job roles. When employees feel empowered, they tend to demonstrate higher confidence, motivation, and positive attitudes toward their work.

Therefore, this study explores the relationship between transformational leadership and employee well-being while examining the mediating role of psychological empowerment. Understanding this relationship can help organizations develop leadership practices that enhance empowerment and promote a healthier and more productive workplace.

Keywords: *Transformational Leadership, Psychological Empowerment, Employee Well-being, Leadership, Organizational Behavior'*

Application of Information Systems for Performance, Management and Commerce in Physical Education and Sports

Dr I M Makkubhai¹ (Dr.) Pushpa .M. Danganavar²

¹ Associate Professor & Head Department of Physical Education and Sports, Nehru Arts, Science & Commerce degree College, Hubballi, Karnataka, India

²M.Com., B.Ed., (Ph.D.), Principal, A.G.M. Arts and Commerce Degree College

Varur Hubballi, Karnataka, India

Abstract:

The rapid evolution of information and communication technologies has significantly reshaped the landscape of physical education and sports. Information systems now play a vital role in enhancing athletic performance, streamlining organizational management and expanding commercial opportunities within the sports sector. This research paper

examines the application of information systems across three key dimensions : sports performance, management and commerce. The study focuses on how digital tools such as Sportsperson management systems, performance analytics platforms, learning management systems and sports information databases contribute to systematic data collection, analysis and decision making. In the context of sports performance, information systems enable accurate monitoring of training load, fitness parameters, injury prevention and skill development, leading to improved performance outcomes and evidence based coaching practices. From a management perspective, these systems support efficient planning, scheduling, record maintenance, evaluation and communication within physical education institutions and sports organizations. This also explores the growing influence of information systems in sports commerce, including digital marketing, online ticketing, sponsorship management, fan engagement platforms and e-commerce applications, which have enhanced revenue generation and market reach. The integration of information systems offers several advantages such as improved accuracy, real time access to data, transparency, operational efficiency and enhanced stakeholder interaction. However, challenges including high implementation costs, data security concerns, technological skill gaps and resistance to change remain significant barriers to widespread adoption. The study concludes that the strategic and effective implementation of information systems is essential for sustainable development, competitive performance and commercial growth in modern physical education and sports environments.

Keywords: *Information Systems, Sports Performance, Physical Education Management, Sports Analytics, Sports Commerce.*

Data -Driven Approach and Future Technologies

Raju V¹

Department of Computer Application, Nagarjuna College of Management Studies

7899915742, Email Id: rr9030403@gmail.com

Abstract:

In the era of digital transformation, organizations generate massive volumes of data from various sources such as online platforms, business transactions, social media, and smart devices. Extracting meaningful insights from this data has become essential for effective

decision making. Data Science plays a vital role in analyzing and interpreting large datasets to support strategic and operational decisions in different sectors. Data science integrates techniques from statistics, machine learning, data analytics, and computer science to process and analyze structured as well as unstructured data. By applying advanced analytical methods, organizations can discover hidden patterns, trends, and relationships within the data. These insights help managers and decision makers understand complex situations and choose the most appropriate actions based on evidence rather than intuition. The use of data science in decision making enables organizations to improve efficiency, reduce risks, and enhance productivity. Predictive analytics, one of the key components of data science, allows businesses to forecast future trends and outcomes. For example, companies can analyze customer behavior to design effective marketing strategies, improve customer satisfaction, and optimize resource management. Furthermore, emerging technologies such as artificial intelligence, big data analytics, and data visualization tools have strengthened the capabilities of data science. These technologies help organizations process large datasets quickly and present insights in a clear and understandable form for better decision support. In conclusion, data science has become an important tool for modern organizations to make informed and data-driven decisions. By transforming raw data into actionable knowledge, it helps organizations achieve better performance, innovation, and sustainable growth in a competitive environment.

Integrating Industry 4.0 Technologies within Sustainable Tourism Frameworks: A Study of Emerging Destinations in Kodagu District, Karnataka.

Dr. Joseph P D¹, Mr. Sharath P.G²

¹Research Guide and Associate Professor, Tourism Studies Institute of Management
Mangalore University, Mangalagangothri Karnataka India 574199,
josephpallickal@gmail.com, 9886633210

²Research Scholar, Department of PG Studies and Research in Tourism studies
Mangalore university, Mangalagangothri, harathperumunda@gmail.com 9611641570

Abstract:

The contemporary tourism landscape is undergoing a radical paradigm shift characterized by the convergence of digital innovation and environmental stewardship. This research explores the integration of Industry 4.0 technologies—including the Internet of Things (IoT), Artificial Intelligence (AI), Big Data Analytics, and Smart Infrastructure—within sustainable tourism frameworks, with a localized focus on the emerging destinations of Kodagu district, Karnataka. As an ecologically sensitive region within the Western Ghats, Kodagu faces profound challenges related to over-tourism, waste mismanagement, and resource depletion. Utilizing extensive secondary data from government reports, international tourism databases, and academic literature from 2000 to 2025, this study examines how technology can enhance destination management and community participation while preserving environmental integrity. Findings indicate that while Kodagu achieved a peak of 45.72 lakh visitors in 2024, a subsequent decline in 2025 highlights a saturation point driven by infrastructure constraints and a lack of integrated digital governance. The study proposes a systemic "Sustainable Smart Tourism Model" (SSTM) that leverages predictive analytics and real-time monitoring to align economic growth with the United Nations Sustainable Development Goals. The research concludes that a multi-stakeholder approach, rooted in digital literacy and policy coordination, is essential for transitioning Kodagu from a conventional mass-tourism hub to a resilient, smart-destination ecosystem.

Keywords: *Industry 4.0, Smart Tourism, Sustainable Development, Kodagu, IoT, AI, Destination Management, Western Ghats*

Balancing Tradition and Innovation: Sustainable Business Growth through Technology at Kanti Sweets, Bengaluru”

Srinanda S B¹, Bharatesh Chakravarthi²

¹Assistant Professor, K S Degree College, Bengaluru, srinanda.sb@gmail.com,
7279780033

²Assistant Professor, Arizona State University, chakravarthi589@gmail.com,
8095464858

Abstract:

Technology has increasingly become a key enabler of sustainable, responsible, and inclusive business growth, not only for technology-driven startups but also for traditional enterprises rooted in local cultures. This paper explores Kanti Sweets, a Bengaluru-based legacy manufacturer of sweets and snacks, to understand how the selective and gradual adoption of technology has supported long-term business success while safeguarding its cultural and culinary heritage. The study is based on secondary data drawn from company disclosures, industry reports, and academic literature focusing on digital transformation in the Indian food processing sector. Over time, Kanti Sweets has reduced its reliance on manual labor by introducing mechanization in critical stages of production, leading to improved product consistency, enhanced hygiene standards, and greater operational efficiency. These measures have also helped minimize raw material wastage, contributing to environmental sustainability in food manufacturing. The company adheres to ISO 9001 and ISO 22000 food safety standards and operates an in-house quality testing laboratory, ensuring regulatory compliance and reinforcing responsible business practices. Furthermore, the adoption of online ordering facilities and digital payment systems has widened customer access and improved convenience, supporting inclusive growth across diverse consumer groups in Bengaluru. These firm-level initiatives align with broader industry evidence suggesting that small and medium-sized enterprises in the Indian food sector benefit from mechanization and digital systems through improved traceability, reduced waste, and enhanced efficiency. The paper concludes that Kanti Sweets provides a compelling example of how pragmatic and incremental use of technology can enable traditional enterprises to balance economic growth with environmental responsibility and

social inclusion, offering a replicable model for sustainable business development in urban Indian contexts.

Keywords: *Sustainable Business Growth, Digital Transformation, Mechanization in Food Processing, Traditional Enterprises, Incremental Technology Adoption*

Work Stress and Its Impact on the Well-Being and Mental Health of Primary Teachers with Special Reference to Moodbidri Region.

Mrs. Shubha¹, Ms. Tejasvi shetty²

¹Asst. Professor, Dept of PG studies in HRD Alva's college Moodbidri, Email: - shubhamhrd4@gmail.com Mob:- 9743307972

²Student I, M.Com (HRD) , Alva's college Moodbidri, Email: - shettytejasvi71@gmail.com Mob:- 7019109575

Abstract:

Stress is a part of life, work stress is identified as most common pattern of stress in present scenario in all sectors Stress management is very important for primary teachers. Primary teachers teach young children and have many responsibilities. They handle classroom activities, school work, and parents' expectations. Because of this, they may feel stress, pressure, and tiredness. Stress management means controlling and reducing stress in a healthy way. Common problems faced by teachers are anxiety, tension, burnout, low motivation, and job dissatisfaction. If stress is not managed properly, it can reduce teaching quality and work performance. It can also affect their personal life and happiness. The Present empirical study aims to find out the main causes of stress among primary teachers and how it affects their well-being , mental health ,work performance This also highlights the institutional and employee strategies followed for handling stress and to suggests simple ways to manage stress .The study is mainly based both primary and secondary data, Primary data will be collected by personal opinion and through survey method which involve administering the questionnaire to the selected teachers of the schools. The area of this study is confined to Moodbidri region.

Key Words: *Stress management, primary teachers, mental health, well-being, burnout, work-life balance.*

Drivers of Digital Transformation in the Indian Banking Sector

Dr. Gayathri Devi A¹, Mrs. Thejaswini P K²

¹Professor, Department of Commerce, FMKMC College, Madikeri – 571201.

Email ID : gayathridevi73@gmail.com

²Research Scholar, Department of Commerce, Mangalore University &

Assistant Professor PG Department of Commerce, Poornaprajna College

(Autonomous) Udupi

Email ID: thejaswiniphd23@gmail.com

Abstract:

Digital transformation has become a crucial strategic priority for the banking sector worldwide. The rapid advancement of information and communication technologies, changing customer expectations, increasing competition from fintech companies, and evolving regulatory frameworks have compelled banks to adopt digital technologies to enhance operational efficiency and customer experience. The study identified the major drivers of digital transformation in the banking sector, examined the role of technological innovation and fintech in accelerating digital banking and analyzed the impact of digital transformation on banking operations and customer services. The research relied on secondary data. The study identified several key drivers that accelerate digital transformation in banks, including technological innovation, customer demand for digital services, regulatory initiatives, competition from fintech firms, and the need for operational efficiency. Technological advancements such as artificial intelligence, blockchain, cloud computing, and mobile banking platforms have significantly reshaped banking operations and customers increasingly demand convenient, secure, and real-time financial services, which has encouraged banks to invest heavily in digital infrastructure. Government initiatives and regulatory frameworks promoting digital financial inclusion also act as strong catalysts for digital transformation. The findings of the study revealed that digital transformation not only improves banking efficiency but also enhances customer engagement, reduces operational costs, and strengthens financial inclusion. However, the transformation process also presents challenges such as cybersecurity risks, high implementation costs, and the need for skilled human resources. The study

suggested that banks should adopt a strategic approach to digital transformation by investing in advanced technologies, strengthening cybersecurity measures, and promoting digital literacy among customers and employees.

A Study on, “Consumer Preference and Purchasing Behaviour Towards Toothpaste Brands in Udupi District

Mr. Vignesh Kiran Kamath¹,

¹I Year M. Com, POORNAPRAJNA COLLEGE AND POST GRADUATE CENTRE
(AUTONOMOUS), UDUPI, Ph No: 7892194508,

Email: vigneshkamath02@gmail.com

Abstract:

Consumer preferences and purchasing behaviour are very crucial factors that toothpaste manufacturing companies must consider. The goal of this study is to understand consumer preferences and purchasing behaviour towards toothpaste brands, flavours and pricing in Udupi District. The study focuses on identifying the types of toothpaste preferred by consumers, the brands they use, the size of toothpaste they prefer, factors influencing their purchase decision, place of purchase they prefer, consumer sensitivity towards price changes and how loyal they are towards brand especially when there are price changes. In this research, the primary data was collected from a sample of 100 consumers in Udupi District. The data which were collected was then analyzed using simple, descriptive, percentage methods along with the Hypothesis and Chi-Square test to study the relationship between price increase and brand switching behaviour. The results indicate that consumers are loyal to their favourite brands and are less affected by price (high brand loyalty). The finding provides useful insights for toothpaste manufacturers, marketers and retailers for developing an effective and efficient strategies to face the competition. This research highlights the need of building a strong brand through which a particular toothpaste company can attain success even in a highly competitive market.

Key words: *Consumer Preferences, Consumer Sensitivity, Brand Switching Behaviour, Brand Loyalty*

A Study on Inventory Management and Its Impact on Financial Performance

Vikas T G¹, Dr. Chethan Raj K²

¹Student, MBA, Nagarjuna college of engineering and technology

²Assistant professor, NCET MBA Department

Abstract:

Inventory management plays a crucial role in the operational and financial success of any organization. Effective inventory control helps in maintaining the right balance between demand and supply, minimizing holding costs, and avoiding stock shortages or overstocking. This study focuses on analyzing the inventory management practices and examining their impact on the financial performance of the organization. The research aims to evaluate different inventory control techniques used in the company and to understand how efficient inventory management contributes to profitability, cost control, and operational efficiency. Both primary and secondary data are used for the study. Primary data is collected through questionnaires and discussions with employees, while secondary data is obtained from company records, financial statements, and reports. The study also analyzes inventory turnover ratio and other financial indicators to measure the effectiveness of inventory management. The findings help in identifying the strengths and weaknesses of the current inventory system and suggest improvements for better financial performance. Overall, the study highlights the importance of proper inventory management in enhancing organizational efficiency and profitability.

Key words: *inventory management, financial performance, overstocking, profitability.*

Integrating IoT and Artificial Intelligence for Resource Management in Kodagu's Homestay Networks:

Mr. Yogananda G K¹

¹Lecturer, Dept of BBA (TTM), FMKMCC, Madikeri.

Yogagk1@gmail.com, Contact No: 9483836069

Abstract:

The rapid expansion of tourism in Kodagu district, Karnataka, has generated significant local economic opportunities while simultaneously intensifying pressure on water, energy, and waste management systems. Homestays, which constitute a major component of Kodagu's micro-tourism economy, are particularly affected because many operate in ecologically sensitive and infrastructurally constrained locations. This study examines the potential of Internet of Things (IoT) and Artificial Intelligence (AI) technologies to improve resource efficiency in Kodagu's homestay networks through a systematic secondary data analysis. Drawing on government reports, tourism data compendiums, and relevant scholarly literature on sustainable tourism, smart hospitality, and Industry 4.0 applications, the study synthesizes current resource-management challenges and evaluates the applicability of smart monitoring and predictive systems in decentralized tourism settings. The analysis suggests that IoT-based sensing combined with AI-driven predictive analytics can substantially improve water monitoring, optimize energy use, and enhance waste segregation and collection efficiency. However, the adoption of these technologies is constrained by infrastructural deficits, limited digital literacy, and high initial investment costs. The paper proposes a three-layer technological framework tailored to Kodagu's rural topography and concludes with policy recommendations focused on subsidies, localized network infrastructure, vernacular interfaces, and circular e-waste management. The study contributes to the emerging discourse on sustainable micro-tourism by contextualizing smart resource management within a rural, ecologically sensitive destination.

Keywords: *sustainable tourism; homestays; Internet of Things; artificial intelligence; resource management; Kodagu; smart tourism*

Enhancing Cybersecurity in Industrial IoT Systems

Ms .Jeevitha V¹, Mrs. Devika Rajan²

¹Assistant Professor, Computer Science, Nagarjuna College of Management Studies,
jeevithav33@gmail.com, 8861842758

²Assistant Professor, Computer Science, Nagarjuna College of Management Studies,
devikarajan425@gmail.com, 9744554793

Abstract:

The integration of the Internet of Things (IoT) in Industry 4.0 has revolutionized industrial operations by enabling real-time monitoring, automation, and data-driven decision-making. However, the increased connectivity of industrial IoT (IoT) devices also introduces significant cybersecurity risks, including data breaches, unauthorized access, and cyberattacks on critical infrastructure. This paper explores the key security challenges faced by IoT devices in Industry 4.0, such as vulnerabilities in communication protocols, lack of standardized security frameworks, and resource constrained device security. Additionally, it reviews emerging solutions, including blockchain for secure data exchange, AI-driven threat detection, and zero trust architectures. A comparative analysis of existing security frameworks highlights their effectiveness and limitations. Finally, this study proposes a multi-layered security approach that combines encryption, authentication, and anomaly detection techniques to enhance IoT security in industrial environments. Addressing these challenges is crucial for ensuring the resilience and reliability of Industry 4.0 systems against evolving cyber threats.

Key Words: *Industrial IoT (IoT), Cybersecurity, Threat Detection, Blockchain Security*

AI-Driven Cyber Threat Detection for Secure Digital Infrastructure

Sarayu M¹, Laasya B S²

¹Student, Department of Computer Science, Nagarjuna College of Management Studies,
sarayureddy84@gmail.com, 8310096610

²Student, Computer Science, Nagarjuna College of Management Studies,
laasyagowda19@gmail.com, 9380692603

Abstract:

The operational environment of contemporary enterprises has changed due to the quick uptake of digital technology. However, the cyber threat surface has greatly increased due to the growing reliance on linked digital platforms. Sophisticated cyberattacks like ransomware, phishing campaigns, and advanced persistent threats are frequently difficult for traditional security measures to identify. By providing automated threat detection, intelligent analysis, and adaptive response mechanisms, artificial intelligence (AI) has become a potent technology that can improve cybersecurity. The function of AI-driven cybersecurity frameworks in the context of digital transformation is examined in this study. The study suggests an intelligent cyber protection strategy that combines Transformer-based models for phishing detection, Gradient Boosting classifiers for attack categorization, and Autoencoders for anomaly detection. The design also uses Edge-AI analytics to monitor dispersed environments and Zero-Trust security concepts. Data preprocessing, feature engineering, model training, and performance assessment using cybersecurity datasets are all part of the methodology. When compared to conventional signature-based methods, experimental research shows increased detection accuracy, fewer false positives, and quicker threat response. Practical difficulties like data privacy, adversarial machine learning, and scalability problems in AI-based security systems are also covered in the study. The results show that cyber defence tactics in digital ecosystems can be greatly strengthened by combining AI models with contemporary security frameworks. The suggested framework offers a scalable strategy for businesses looking to assist digital transformation projects while strengthening resilience against changing cyberthreats.

Sustainable, Responsible, and Inclusive Business Growth through Technology: A Marketing Management Perspective

Dr Ashok A R Gowda¹,

¹Professor & Director, Patel Institute of Science & Management, Bangalore

Abstract:

In the contemporary business environment, marketing management has evolved beyond traditional promotion and sales to encompass sustainability, responsibility, and inclusivity. Technological advancements such as artificial intelligence (AI), big data analytics, blockchain, social media platforms, and digital marketing automation have redefined how organizations create, communicate, and deliver value. This paper examines how technology-driven marketing strategies enable sustainable resource utilization, responsible brand governance, and inclusive customer engagement. The study proposes a Technology- Integrated Sustainable Marketing (TISM) model to align digital transformation with ESG goals.

Keywords: *Sustainable marketing, Responsible branding, Inclusive marketing, Digital transformation, ESG marketing, Marketing technology (MarTech)*

“A Study On Impact Of Digital Marketing On Customer Loyalty With Special Reference To Moodbidri Region”.

Mrs. Rajashree Rao¹, Ms.Ashika Shetty²

¹Assistant Professor, Department of M.Com – (HRD)Alvas College – Moodbidri,

rajashreerao19@alvascollege.com, Contact:9916111313

²Ilyr Student M.Com (HRD), Alvas College, Email: ashikanshetty@gmail.com,

Contact: 8105322019

Digital marketing has emerged as a vital strategic tool for businesses to engage with customers and promote products and services through multiple online platforms, including social media, websites, email marketing, and digital advertisements. These channels play a significant role in shaping customer attitudes, influencing purchasing behaviour, and

fostering brand loyalty. With the increasing frequency of customer interaction with digital content, promotional campaigns, and brand communications, understanding the impact of digital marketing on customer loyalty has become essential. The primary objective of this study is to examine the influence of digital marketing practices on customer loyalty, focusing on how these digital channels affect purchase decisions and customer perceptions. This study examines the impact of digital marketing on customer loyalty, and exploring how strategies like social media, email marketing, and personalization influence customer retention. This research is descriptive study method based on both primary and secondary data. Primary data has been collected through structured questionnaires administered to customers in the Moodbidri region, while secondary data has been gathered from relevant academic and industry source .The study provides insights for business to optimize their digital marketing efforts and build lasting customer relationships. So digital marketing not only enables businesses to effectively communicate with their target audience but also supports the development of long-term customer relationships through personalized and consistent engagement.

KEYWORDS: *E platform, Digital market, Customer habit , Social media, Customer loyalty.*

A Study on Customer Satisfaction Towards E-Commerce Platforms- With Special Reference to Moodubidire Region.

Ms. Shravya Sanil¹

¹Alva's College (Autonomous), Vidyagiri,, Moodubidire-574227, Email:

shravyasanilshravyasnil@gmail.com, Contact Number:7795264364

Abstract:

E-commerce platforms have become an important part of modern shopping due to the rapid growth of internet technology and digital payment systems. Customer satisfaction plays a key role in the success and growth of e-commerce platforms. When customers are satisfied with factors such as product quality, pricing, delivery speed, website usability, and customer service, they are more likely to continue using these platforms and recommend them to others also.

The rapid growth of e-commerce has transformed the retail landscape, with more customers turning to online platforms for their shopping needs. Purpose of the study is to

examine customer satisfaction towards e-commerce platforms and understand how satisfied customers are with e-commerce platforms by investigating the factors that influence satisfaction and loyalty. Our research suggests that factors such as website usability, product variety, pricing, delivery speed, and customer support significantly impact customer satisfaction.

study provide insights for e-commerce businesses to improve customer satisfaction and loyalty, ultimately driving business growth and success

The study also aims to find out problems customers face while shopping online. The results will help e-commerce companies to improve their services and provide a better online shopping experience for customers.

Furthermore, the research will highlight the importance of personalized services and user experience in enhancing customer engagement and building strong relationships between customers and e-commerce platforms.

This study is based on both primary and secondary data. Primary data was collected through questionnaires from customers in the Moodbidri region. The research aims to understand customer satisfaction towards e-commerce platforms and its impact on customer loyalty. The findings of the study will help businesses understand the importance of e-commerce platforms in maintaining and enhancing customer satisfaction and loyalty.

Keywords: *E-commerce platforms, customer satisfaction, online shopping, digital payments, online consumer behaviour.*

Role of Artificial Intelligence in Transforming Modern Marketing Practices: A Conceptual Study

Amrutha R A¹

¹Assistant Professor, HKBK Degree College, Nagawara., Location: Bengaluru, Phone: 8105369980

Abstract:

Artificial Intelligence (AI) has emerged as a transformative force in modern marketing, significantly altering the way businesses interact with customers and design their marketing strategies. This conceptual study aims to explore the role of AI in reshaping

marketing practices by enhancing efficiency, personalization, and decision-making processes. The study is based on secondary sources such as research articles, industry reports, journals, and online databases to understand the growing relevance of AI in marketing. AI technologies such as machine learning, predictive analytics, chatbots, and recommendation systems are increasingly being used by organizations to analyze consumer behavior, forecast demand, and deliver personalized customer experiences. The integration of AI in digital marketing platforms has enabled marketers to automate campaigns, optimize content, and improve customer engagement across multiple channels. This study highlights how AI-driven tools contribute to better targeting, real-time interaction, and improved return on investment. Furthermore, it discusses the challenges associated with AI adoption, including data privacy concerns, high implementation costs, and lack of technical expertise. The conceptual analysis suggests that despite these challenges, AI continues to play a crucial role in revolutionizing marketing practices and providing competitive advantages to businesses. The study concludes that organizations must strategically adopt AI technologies to stay relevant in the rapidly evolving digital landscape and meet changing consumer expectations. Overall, AI is not only enhancing marketing efficiency but also redefining the future of marketing by enabling smarter and more customer-centric approaches.

Keywords: *Artificial Intelligence, Digital Marketing, Consumer Behavior, Personalization, Marketing Automation, Predictive Analytics, Customer Engagement, Conceptual Study*

An Analysis of Tax Compliance and Revenue Trends under the Goods and Services Tax and Income Tax Systems in India.

Kavitha K N ¹

¹Lecturer, Institution: Field Marshal K M Cariappa College, Madikeri, Karnataka,
Phone: +91 97419 04844, Email:kavithahani1993@gmail.com

Abstract

The study titled “An Analysis of Tax Compliance and Revenue Trends under the Goods and Services Tax and Income Tax Systems in India” focuses on examining the growth,

patterns, and efficiency of tax collection along with the level of compliance among taxpayers in India. This research is based entirely on secondary data collected from reliable sources such as the Union Budget, Economic Survey, reports of the Income Tax Department, and GST Council publications. The introduction of the Goods and Services Tax (GST) has significantly transformed the indirect tax system by creating a unified tax structure, while reforms in income tax policies have aimed at improving transparency, accountability, and voluntary compliance. The study analyzes year-wise data on GST collections, direct tax revenues, tax-to-GDP ratio, and the number of return filings to understand trends and evaluate the effectiveness of tax reforms. Using analytical tools such as percentage analysis, growth rate calculation, and trend analysis, the research highlights the impact of digitalization, e-filing systems, and policy simplification on taxpayer behavior. The findings suggest that technological advancements and administrative reforms have contributed to increased compliance and higher revenue generation, although challenges such as tax evasion, lack of awareness, and procedural complexities still persist. The study concludes that continuous policy improvements and strengthening of tax administration are essential to enhance compliance levels and ensure sustainable revenue growth in India.

Keywords: *Tax Compliance, GST, Income Tax, Revenue Trends, Secondary Data, Tax Reforms, Digitalization, India*

The Fiscal Drain: Analysing the Long-term Consequences of Tax Havens on Developing Economies

Dr. Lakshmipathi K N¹.

¹Assistant Professor, Amity Business School, Amity University, Bangaluru Email ID: lakshmipathikani@gmail.com, Contact No.:8970810078

Abstract: -

The growing dependency on international tax havens has raised serious threats for developing economies, mainly because of its effect on tax revenues and fiscal stability. These laws, known for low tax rates and financial secrecy, create space for MNC's and wealthy individuals to move profits away from the countries where their actual economic

activities take place. As a result, governments lose a major portion of their corporate tax base.

This paper inspects the long-term fiscal implications of such practices. Outline from forensic accounting and international taxation literature, it focuses on common mechanisms like transfer pricing, treaty shopping, and thin capitalisation. In most cases, these are not accidental gaps in the system, but part of structured financial strategies designed to lessen tax liabilities across jurisdictions.

The analysis shows that the effects are not limited to short-term revenue losses. Over time, continuous profit shifting declines the ability of governments to generate domestic resources. This often leads to greater reliance on borrowing, while the tax burden shifts towards consumption and labour. Such changes can widen indifference and limit public spending in key sectors like education, healthcare, and infrastructure.

Addressing this issue requires coordinated global action. Measures such as automatic exchange of financial information and global minimum tax frameworks are steps in the right direction. However, their success depends on constant implementation and active participation from developing countries.

Keywords: Tax Havens; International Taxation; Profit Shifting; Developing Economies; Fiscal Policy; Forensic Accounting.

Artificial Intelligence-Driven Circular Economy Models for Rural Women Micro-Entrepreneurs: A Sustainable Livelihood Framework

Ms. Meghana G A ¹, Dr. Roopadarshini S²

¹Research Scholar, Department of Management Studies, Visvesvaraya Technological University – Belagavi, Center for Post Graduate Studies-Bangalore,
<https://orcid.org/0009-0008-9367-1239>

² Assistant , Professor & Research Supervisor, Department of Master of Business Administration, Visvesvaraya Technological University – Belagavi, Center for Post Graduate Studies-Bangalore, <https://orcid.org/0009-0001-9380-5451>, E-Mail meghavtu2824@gmail.com

Abstract:

This study investigates the integration of artificial intelligence (AI) with circular economy models to enhance sustainable livelihoods for rural women micro-

entrepreneurs. Utilizing bibliometric analysis of publications from 2006 to 2025, the research identifies trends, thematic evolution, and knowledge structures within this emerging domain. Findings reveal that AI-driven circular economy practices significantly improve resource efficiency, market access, and decision-making, contributing to income stability and environmental sustainability. Tools such as predictive analytics, automation, and decision-support systems facilitate waste reduction, resource reuse, and local value creation. Adoption is influenced by socio-economic, technological, and institutional factors, with challenges including limited digital literacy, inadequate infrastructure, and weak institutional support. Bibliometric and thematic analyses indicate a multidisciplinary research landscape, highlighting motor themes like big data and energy efficiency, alongside niche areas such as sustainability, agriculture, and renewable energy. The study emphasizes managerial, societal, and research implications, recommending targeted capacity-building programs, affordable AI solutions, and supportive policies. Future research should explore longitudinal impacts, regional comparisons, and strategies to overcome adoption barriers.

Keywords: *Artificial Intelligence, Circular Economy, Rural Women Micro-Entrepreneurs, Sustainable Livelihoods, Bibliometric Analysis, Resource Efficiency*

Artificial Intelligence in Finance: Transforming Financial Decision-Making and Risk Management.

Dhanush P¹, Ms. Triveni N²

¹2nd Year Student, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura. ghanushgowda94110@gmail.com.

²Assistant Professor, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura. trivenin6684@gmail.com.

Abstract

Artificial Intelligence (AI) has emerged as a transformative technology in the financial sector, significantly enhancing financial decision-making, risk management, and operational efficiency. The rapid growth of digital financial transactions and the availability of large-scale financial datasets have encouraged financial institutions to adopt AI-driven solutions to analyze complex market dynamics and improve strategic

decision-making. AI technologies, particularly machine learning, deep learning, and natural language processing, enable financial systems to process vast amounts of structured and unstructured data, identify hidden patterns, and generate predictive insights that were previously difficult to obtain using traditional analytical methods. One of the most significant contributions of AI in finance is its ability to support predictive analytics and intelligent forecasting. By analyzing historical financial data and market indicators, AI algorithms can predict stock price movements, detect market trends, and assist investors in optimizing portfolio management strategies. Moreover, AI-based systems play a critical role in fraud detection and risk assessment by identifying abnormal transaction patterns and suspicious activities in real time. Machine learning models can evaluate millions of financial transactions simultaneously, allowing financial institutions to minimize fraud-related losses and improve financial security (Jordan & Mitchell, 2015). AI also enhances customer experience within banking and financial services through automated chatbots, robo-advisors, and personalized financial recommendations. These technologies help institutions deliver faster and more efficient services while reducing operational costs. Furthermore, AI-powered credit scoring models provide more accurate risk assessments by analyzing a wide range of customer data, thereby improving loan approval processes and financial inclusion (Fuster et al., 2019). Despite these advantages, the adoption of AI in finance raises concerns regarding data privacy, algorithmic transparency, and regulatory compliance. Financial institutions must ensure that AI systems operate within ethical and legal frameworks to maintain trust and stability in financial markets. As AI technologies continue to evolve, their integration into financial systems is expected to drive innovation, improve financial resilience, and support data-driven financial decision-making in the future.

Keywords: *Artificial Intelligence, Financial Technology (FinTech), Machine Learning, Predictive Analytics, Fraud Detection, Risk Management, Financial Decision-Making.*

Sustainable Marketing: Integrating Environmental Responsibility and Consumer Value in Modern Business Strategies.

Hamsaveni R¹, Harshith Babu VS²

¹ 1st Year Student, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura, hamsagowdaa63@gmail.com.

² Assistant Professor, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura, harshithbabu.vs@gmail.com.

Abstract

Sustainable marketing has become increasingly important in modern business environments as organizations face growing pressure to address environmental concerns, social responsibilities, and changing consumer expectations. It refers to the process of creating, communicating, and delivering value to customers in a manner that protects natural resources and promotes societal well-being. Unlike traditional marketing approaches that focus mainly on short-term profits and sales growth, sustainable marketing integrates economic, environmental, and social considerations into long-term strategic decision-making (Kotler, 2011). This approach encourages businesses to develop marketing practices that support responsible production, ethical consumption, and environmental conservation. The primary objective of sustainable marketing is to balance organizational profitability with environmental protection and social welfare. These practices help organizations reduce their environmental impact while meeting the growing demand for sustainable products and services. Rising environmental awareness among consumers has significantly influenced purchasing behaviour, motivating businesses to adopt environmentally responsible marketing practices. Sustainable marketing also contributes to long-term organizational performance by promoting efficient resource utilization, reducing waste, and strengthening relationships with stakeholders such as customers, suppliers, and communities. In addition, transparency, authenticity, and accountability are essential in sustainable marketing communication to prevent misleading claims and practices such as greenwashing. Overall, sustainable marketing is not only an ethical responsibility but also a strategic business approach that supports long-term economic growth, environmental protection, and social development. By aligning marketing strategies with sustainability goals, organizations can create

shared value for businesses, customers, and society, thereby contributing to a more responsible and sustainable future (Belz & Peattie, 2012).

Keywords: *Sustainable Marketing, Green Marketing, Environmental Sustainability, Ethical Branding, Consumer Behaviour, Corporate Social Responsibility, Sustainable Business Strategies.*

Understanding the Business Intelligence Cycle: A Framework for Data-Driven Organizational Decision-Making.

Hamsaveena G P¹, Dr. Girish Kumar H V²

¹2nd Year Student, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura, gphamsaveena@gmail.com

²Associate Professor, Department of MBA, Nagarjuna College of Management Studies,
girishhvkumar@gmail.com, 8892969246

Abstract

In the contemporary data-driven business environment, organizations increasingly rely on Business Intelligence (BI) systems to transform raw data into actionable insights that support strategic and operational decision-making. The Business Intelligence Cycle represents a structured and iterative process through which organizations collect, process, analyze, and disseminate information to improve business performance. This cycle ensures that data is systematically converted into knowledge that can guide managers in responding to dynamic market conditions and competitive pressures. The Business Intelligence Cycle generally consists of several interconnected stages: data collection, data integration, data analysis, information dissemination, and decision-making. During the data collection phase, organizations gather data from multiple internal and external sources such as transactional systems, customer databases, market reports, and digital platforms. The collected data is then processed and integrated through data warehousing and extraction, transformation, and loading (ETL) procedures to ensure consistency and reliability (Turban et al., 2018). In the analysis stage, advanced analytical tools including data mining, statistical analysis, and visualization techniques are applied to identify patterns, trends, and relationships within the data. Subsequently, the processed information is presented to decision-makers through dashboards, reports, and interactive visualization platforms, enabling them to interpret insights effectively. The final stage

involves the application of these insights to support strategic, tactical, and operational decisions within the organization. Importantly, the cycle is continuous; feedback from decisions generates new data, which re-enters the BI system for further analysis and improvement. Effective implementation of the Business Intelligence Cycle enhances organizational agility, improves operational efficiency, and enables firms to gain competitive advantages in increasingly complex markets. As organizations continue to generate vast volumes of data, the importance of a well-structured BI cycle becomes critical for ensuring that information is transformed into meaningful knowledge. Consequently, integrating modern analytics, data governance, and technological infrastructure within the BI cycle is essential for maximizing the value derived from organizational data resources.

Study on Role of Strategic Talent Acquisition in Enhancing Employee Retention in Modern Organizations.

Harshitha S B¹

¹2nd year MBA Nagarjuna College of Management Studies, Chikkaballapura,

Harshithasb105@gmail.com , 6363214428

Abstract

In the rapidly evolving business environment, organizations face significant challenges in attracting and retaining talented employees. Strategic talent acquisition has emerged as an essential human resource practice that goes beyond traditional recruitment by focusing on long-term workforce planning and alignment with organizational goals. This study examines the role of strategic talent acquisition in enhancing employee retention in modern organizations. The primary objective of the research is to analyse how effective recruitment strategies, employer branding, and person–organization fit contribute to retaining skilled employees and reducing workforce turnover. The study adopts a quantitative research design to explore the relationship between strategic talent acquisition practices and employee retention outcomes. Data are collected from

employees across different industries using structured questionnaires. A systematic sampling technique is employed to ensure a diverse representation of respondents. Statistical tools such as descriptive analysis, correlation, and regression analysis are used to evaluate the influence of various talent acquisition practices on employee retention levels. Key variables examined in the study include recruitment planning, employer branding, candidate experience, and alignment between employee competencies and organizational culture. The findings reveal that organizations implementing well-structured and strategic recruitment practices experience higher levels of employee commitment and lower turnover rates. Effective talent acquisition strategies help organizations identify candidates whose skills, values, and career expectations align with organizational objectives. Furthermore, strong employer branding and transparent recruitment processes significantly enhance employee satisfaction and long-term engagement. The study highlights that strategic talent acquisition serves as a foundation for building a stable and sustainable workforce. This research contributes to the field of human resource management by emphasizing the importance of integrating talent acquisition strategies with employee retention initiatives. The findings offer valuable insights for HR managers and organizational leaders in designing recruitment practices that not only attract high-quality talent but also promote long-term employee retention and organizational effectiveness.

Sustainable Finance and Corporate Responsibility: A Conceptual Study of Emerging Financial Practices

Hemashree K N¹

¹2nd year Student Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura, hemashreenarasimhaiah@gmail.com, 7483141849.

Abstract

Sustainable finance has emerged as a critical framework for aligning financial systems with environmental, social, and governance (ESG) objectives while promoting responsible corporate behavior. This study aims to conceptually examine the relationship

between sustainable finance and corporate responsibility, focusing on emerging financial practices that support long-term economic, environmental, and social sustainability. The purpose of this research is to explore how modern financial mechanisms encourage corporations to integrate responsible practices into their strategic and operational decisions. The study adopts a conceptual research methodology, relying on an extensive review and synthesis of existing literature, theoretical frameworks, policy reports, and academic discussions related to sustainable finance and corporate responsibility. By analyzing prior studies, institutional guidelines, and emerging financial models, the research identifies key dimensions, trends, and practices that shape the evolution of sustainable financial systems. The findings indicate that sustainable finance plays a significant role in promoting responsible corporate conduct by integrating ESG considerations into investment decisions, risk management, and financial reporting. Emerging practices such as green bonds, sustainable investment funds, ESG-based financing, and impact investing are encouraging corporations to adopt transparent governance structures, environmentally responsible operations, and socially inclusive policies. The study also highlights that regulatory support, stakeholder pressure, and increasing investor awareness are driving organizations to align financial strategies with sustainability objectives. Furthermore, the conceptual analysis reveals that sustainable finance not only enhances corporate accountability but also contributes to long-term value creation, improved corporate reputation, and resilience against financial and environmental risks.

The Impact of Digital Transformation on HRM Practices.

Hithishini G N¹, Mr. Rakshith Gowda K M²

2nd Year Student, Department of MBA, Nagarjuna Collage of Management Studies,
Chikkaballapura, Email: nagrajhithishini@gmail.com, 8310744855.

²Assistant Professor, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura. Email: rakshithgowda151@gmail.com Contact: 9620332214.

Abstract

Digital transformation has emerged as a critical driver of organizational change, significantly influencing Human Resource Management (HRM) practices across industries. With the rapid advancement of technologies such as artificial intelligence, cloud computing, big data analytics, and digital platforms, HR departments are transitioning from traditional administrative roles to more strategic and technology-driven functions. This study examines the impact of digital transformation on HRM practices and its role in improving organizational efficiency, employee engagement, and talent management. The primary objective of this research is to analyze how digital technologies influence key HR functions, including recruitment, training and development, performance management, and employee communication. Organizations are increasingly adopting digital HR tools such as Human Resource Information Systems (HRIS), applicant tracking systems, and digital learning platforms to streamline HR operations and enhance decision-making. Recent studies indicate that a large percentage of organizations worldwide have integrated HR technologies, enabling faster recruitment processes, improved workforce analytics, and enhanced employee experiences. The research adopts a conceptual and analytical approach by reviewing existing literature, industry reports, and empirical studies related to digital HR practices. The findings suggest that digital transformation improves operational efficiency by automating routine HR tasks and allowing HR professionals to focus on strategic initiatives. Furthermore, digital platforms facilitate better employee engagement through flexible working arrangements, self-service HR portals, and real-time communication tools. However, the study also highlights certain challenges, including technological integration issues, cybersecurity concerns, and the need for digital skills among HR professionals. In conclusion, digital transformation plays a crucial role in reshaping HRM practices by promoting innovation, efficiency, and strategic workforce management. Organizations

that successfully integrate digital technologies into HR processes can gain a competitive advantage by improving talent acquisition, employee satisfaction, and overall organizational performance.

Workforce Mental Wellness: Support Systems and Improvement Strategies

Jayanth L¹, Gahan Gowda T M², Dr Nagaraju R³

¹1st Year Student, Department of MBA, Nagarjuna College of Management Studies, Chikkaballapura, jayanthjayanth0156@gmail.com, 9481172865

²1st Year Student, Department of MBA, Nagarjuna College of Management Studies, Chikkaballapura, gahangowda596@gmail.com, 8105745199

³Assistant Professor, Department of MBA, Nagarjuna College of Management Studies, Chikkaballapura, Nagaraju93@gmail.com, 9448064270

Abstract

Workforce mental wellness has emerged as a critical component of organizational sustainability and productivity in the modern workplace. Rapid technological change, increased workloads, job insecurity, and blurred work–life boundaries have significantly influenced employees’ psychological well-being. This conceptual research paper examines the importance of mental wellness in the workforce and explores various support systems and strategic interventions that organizations can implement to promote a healthier work environment. The study synthesizes existing literature on workplace mental health, focusing on common stressors such as occupational pressure, burnout, lack of organizational support, and limited access to psychological resources. It highlights the relationship between employee mental wellness and key organizational outcomes including job satisfaction, employee engagement, productivity, and retention. Poor mental health not only affects individual performance but also contributes to absenteeism, presenteeism, and higher healthcare costs for organizations. This paper conceptually analyses different organizational support systems designed to enhance workforce mental wellness. These include employee assistance programs, counseling services, peer support networks, flexible work arrangements, mental health awareness initiatives, and leadership training focused on empathetic management. Furthermore, the research emphasizes the role of organizational culture in fostering psychological safety, open

communication, and reduced stigma surrounding mental health issues. The paper also proposes strategic frameworks for improving workforce mental wellness, including proactive stress management programs, digital mental health tools, regular well-being assessments, and policy-level interventions. Integrating mental health strategies into human resource management practices is suggested as a sustainable approach to maintaining employee well-being. The conceptual framework developed in this study underscores the importance of collaborative efforts between management, employees, and mental health professionals to create supportive and resilient workplaces.

A Conceptual Study of Financial Statement using Ratio Analysis

Meghana M Shetty¹, Jeevan N², Mr. Harshith Babu V S³

¹1st Year Student , Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura, meganamshetty21@gmail.com, 9945247521

²1st Year Student , Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura, jeevanngowdajeevanngowda@gmail.com , 8123536559

³Assistant Professor, Department of MBA, Nagarjuna College of Management studies –
Chikkaballapura, harsithbabu.vs@gmail.com , 8825782433

Abstract

Financial statements serve as an essential source of information for evaluating the financial performance and position of an organization. The analysis and interpretation of these statements help various stakeholders such as investors, creditors, managers, and analysts to make informed economic decisions. This conceptual research paper focuses on the study of financial statements through the application of ratio analysis as an effective analytical tool. Ratio analysis simplifies complex financial data by converting it into meaningful relationships between different financial variables, enabling a clearer understanding of a company's financial condition. The main objective of this study is to examine the significance of ratio analysis in interpreting financial statements and assessing the financial stability and operational efficiency of an organization. Ratio

analysis involves the calculation and evaluation of various financial ratios derived from key financial statements such as the balance sheet, income statement, and cash flow statement. These ratios are generally classified into categories such as liquidity ratios, profitability ratios, solvency ratios, and activity ratios. Each category provides insights into different aspects of a firm's financial health, including its ability to meet short-term obligations, generate profits, manage assets efficiently, and maintain long-term financial stability. This conceptual paper highlights how ratio analysis helps in identifying financial strengths and weaknesses, detecting trends in financial performance, and facilitating comparison between different accounting periods or organizations within the same industry. It also emphasizes the usefulness of ratio analysis as a tool for financial planning, performance evaluation, and strategic decision-making. Although ratio analysis has certain limitations, such as dependence on historical data and variations in accounting practices, it remains one of the most widely used techniques for financial statement analysis. Overall, the study concludes that ratio analysis plays a crucial role in enhancing the understanding of financial statements and provides valuable insights for effective financial management and decision-making.

Women Entrepreneurship: Challenges, Opportunities, and Its Role in Economic Development.

Keerthana M¹

¹1st Year Student Department of MBA, Nagarjuna college of Management Studies,

keerthana7837@gmail.com, 9113977837

Abstract

Women play a vital role in the development of the family, society, and the nation. Their dedication and contribution to family life often extend to broader social and economic progress. Therefore, the empowerment and development of women are essential for the overall growth of any society. Entrepreneurship, which involves innovation, creativity, and the ability to identify opportunities, is an inherent capability among many women.

However, this potential has not always been effectively utilized or encouraged. In recent years, the concept of women entrepreneurship has gained increasing attention from researchers, policymakers, and governments due to its strong relationship with economic development and gender equality. Women entrepreneurs significantly contribute to economic growth by creating employment opportunities, encouraging innovation, and promoting inclusive development. Despite this growing recognition, women who aspire to establish and manage businesses often encounter several challenges compared to their male counterparts. These challenges include gender discrimination, limited access to financial resources, lack of business training and mentorship, societal expectations, and restricted professional networks. Such barriers can discourage women from pursuing entrepreneurial activities or limit the growth of their enterprises. A women entrepreneur can be defined as a woman or a group of women who initiate, organize, and operate a business enterprise. According to the Government of India, a women-owned enterprise is one in which women hold at least 51 percent of the capital and generate at least 51 percent of employment within the organization. Women entrepreneurs often demonstrate strong qualities such as confidence, creativity, leadership, and determination, enabling them to achieve economic independence either individually or through collaborative ventures. Over the past few decades, women entrepreneurship in India has grown considerably, supported by education, government initiatives, financial assistance schemes, and skill development programs. Nevertheless, significant obstacles still remain, including limited access to capital, social biases, and the challenge of balancing family responsibilities with business activities. This study aims to examine the motivating and demotivating factors influencing women entrepreneurs and to identify the major challenges they face while starting and managing their businesses. Furthermore, the research explores the opportunities created by technological advancement, innovation, and supportive government policies. By analyzing these factors, the study highlights the importance of strengthening support systems that encourage women to participate in entrepreneurial activities. Promoting women entrepreneurship not only enhances the socioeconomic status of women but also contributes to gender equality, financial independence, and sustainable economic development in India.

Keywords: *Women Entrepreneurship, Gender Equality, Economic Development, Women Empowerment, Entrepreneurship Challenges, India.*

Personalized Customer Experience in Digital Marketing Using Artificial Intelligence and Data Analytics

Kiran V¹, Pavan K V², Rakshith Gowda K M³

¹1st Year Student Department of MBA, Nagarjuna college of Management Studies,
Kirankumaraz123@gmail.com , 6360668327

²1st Year Student Department of MBA, Nagarjuna college of Management Studies,

³Assistant Professor, Department of MBA, Nagarjuna College of Management studies –
Chikkaballapura, rakshithgowda151@gmail.com - 9620332214

Abstract

The rapid growth of digital technologies has significantly transformed the way businesses interact with customers. Digital marketing has evolved from mass communication to highly personalized engagement through the use of advanced technologies such as Artificial Intelligence (AI) and data analytics. This study focuses on how AI and data analytics contribute to creating personalized customer experiences in digital marketing. By analyzing large volumes of consumer data, including browsing behaviour, purchase history, and online interactions, AI powered systems can predict customer preferences and deliver targeted content, product recommendations, and advertisements. The research aims to examine the effectiveness of AI driven personalization in improving customer satisfaction, engagement, and brand loyalty. It also explores how businesses can use data analytics tools to better understand customer needs and optimize their marketing strategies. Furthermore, the study discusses the benefits and challenges associated with AI-based personalization, including issues related to data privacy, ethical considerations, and technological implementation. Overall, this research highlights the growing importance of integrating Artificial Intelligence and data analytics into digital marketing strategies to enhance customer experience and achieve competitive advantage in the digital marketplace.

The Future of Human Resource Management in Modern Organizations

Manaswitha Reddy K¹, Mr. Rakshith Gowda KM²

¹2nd Year Student Department of MBA, Nagarjuna College of Management Studies,

Chikkaballapura, manaswithareddy84@gmail.com, 8105570709

²Assistant Professor, Department of MBA, Nagarjuna College of Management studies –

Chikkaballapura, rakshithgowda151@gmail.com - 9620332214

Abstract

Human Resource Management (HRM) is undergoing significant transformation due to rapid technological advancements, globalization, and changing workforce expectations. The purpose of this study is to examine the future of Human Resource Management in modern organizations and to understand how HR practices are evolving to meet the demands of the digital workplace. The study focuses on emerging HR trends such as the use of digital technologies, artificial intelligence, remote work models, employee well-being initiatives, and data-driven decision-making in HR processes. This research adopts a qualitative and descriptive approach based on secondary data collected from academic journals, research articles, books, and credible online sources related to HR practices and organizational management. The study analyzes existing literature to identify key trends and developments shaping the future of HRM. The methodology helps in understanding how organizations are adapting their HR strategies to remain competitive and sustainable in a dynamic business environment. The findings of the study indicate that technology plays a crucial role in transforming HR functions such as recruitment, training, performance management, and employee engagement. Modern organizations are increasingly using digital tools, HR analytics, and artificial intelligence to improve efficiency and decision-making. In addition, organizations are placing greater emphasis on employee well-being, diversity and inclusion, flexible work arrangements, and continuous learning to create a productive and supportive work environment. The study highlights that the future of HR will require HR professionals to develop strategic, technological, and leadership skills to effectively manage the evolving workforce. Organizations that adopt innovative HR practices and invest in employee development will be better prepared to face future challenges and opportunities. Overall, this research contributes to understanding how HRM is transforming and emphasizes the importance

of adapting HR strategies to support organizational growth and employee satisfaction in modern workplaces.

The Impact of Online Grocery Delivery Services on Consumer Convenience and Retail Business Growth

Manoj L¹, Rajesh D G², Mr. Harshith Babu V S³

¹1st Year Student Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura, Manojyadavmanu618@gmail.com , 8123990293

²1st Year Student Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura, rajeshdg0601@gmail.com, 8123301959

³Assistant Professor, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura, harsithbabu.vs@gmail.com

Abstract

The rapid expansion of online grocery delivery services has significantly influenced consumer purchasing behaviour and the growth of the retail sector. With the increasing use of smartphones and internet connectivity, consumers now prefer digital platforms for purchasing everyday necessities, including groceries. Online grocery delivery services provide greater convenience by allowing customers to browse, compare, and order products from the comfort of their homes at any time. Features such as secure digital payment options, user-friendly mobile applications, personalized recommendations, and real-time delivery tracking have further enhanced the overall shopping experience. However, challenges such as high delivery costs, logistics management, product quality maintenance, and intense market competition continue to affect the sustainability of these services. Online grocery delivery services enhance consumer convenience by providing easy access, time savings, and doorstep delivery, while helping retailers expand market reach, improve sales, and adopt efficient digital retail strategies.

A Study on Employee Safety, Well-Being, and Mental Health in Modern Organizations

Monika L¹, Mr. Rakshith Gowda KM²

¹2nd Year Student, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura, monikal22082003@gmail.com, 6362652419,

²Assistant Professor, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura, rakshithgowda151@gmail.com - 9620332214

Abstract

Employee safety, well-being, and mental health have become major concerns in modern organizations. Rapid technological changes, increasing job demands, and a highly competitive work environment have created new challenges for employees. Because of this, organizations now understand that protecting employee welfare is not only an ethical responsibility but also an important factor that influences productivity, motivation, and long-term organizational success. This study focuses on the relationship between workplace safety practices, employee well-being, and mental health in modern organizations. The main objective of the research is to understand how effective safety policies, supportive work culture, and employee well-being programs help improve the physical and psychological health of employees. When employees feel safe and supported, they are more likely to perform efficiently and remain committed to their organization. The research follows a descriptive research approach and uses both primary and secondary sources of data. Primary data is collected through structured questionnaires and interviews with employees working in different sectors. Secondary data is obtained from academic journals, organizational reports, and previously published studies related to occupational safety and employee wellness. The findings of the study indicate that organizations that implement strong safety measures, employee assistance programs, and mental health support systems experience higher employee satisfaction and lower workplace stress. These organizations also show better productivity and overall performance. In addition, supportive leadership, open communication, and work-life balance initiatives help create a positive and healthy work environment. However, the study also highlights some challenges faced by organizations, such as lack of awareness about mental health, inadequate workplace policies, and the stigma related to discussing psychological problems at work. The study concludes that integrating safety, well-being,

and mental health strategies into organizational policies is essential for sustainable human resource management and long-term organizational growth.

Keywords: *Employee Safety, Workplace Well-being, Mental Health, Organizational Culture, Employee Productivity, Workplace Stress, Occupational Health, Human Resource Management.*

Crowdfunding and Startup Financing in the Digital Era: Conceptual Perspectives on Alternative Investment Platforms

Mounika C R¹

¹2nd Year Student, Department of MBA, Nagarjuna College of Management studies,
Chikkaballapura. mouni5096@gmail.com ,8310412253

Abstract

Crowdfunding has emerged as an innovative financing mechanism in the digital era, enabling startups and entrepreneurs to raise capital through online platforms by collecting small contributions from a large number of investors. Unlike traditional financing methods such as bank loans, angel investment, or venture capital, crowdfunding utilizes digital technologies, social media networks, and online platforms to connect entrepreneurs directly with potential investors. The study reviews different types of crowdfunding models, including donation-based, reward-based, equity-based, and debt-based crowdfunding, and analyzes how these models have expanded funding opportunities for early-stage startups that often face difficulties in accessing conventional financial resources. Furthermore, the paper discusses the role of technological advancement and digital platforms in improving transparency, accessibility, and investor participation in startup funding activities. It also highlights the opportunities provided by crowdfunding, such as financial inclusion, community engagement, and innovation promotion, while addressing key challenges including regulatory issues, information asymmetry, risk of project failure, and investor protection concerns. By synthesizing existing literature and theoretical insights, the paper proposes a conceptual understanding of how crowdfunding platforms, investor behaviour, and startup ecosystem dynamics interact to influence entrepreneurial financing. The study concludes that crowdfunding has the potential to complement traditional financing sources and significantly contribute to the growth and sustainability of startups and small businesses. Therefore, strengthening

regulatory frameworks, enhancing platform transparency, and increasing investor awareness are essential for the long-term development and credibility of crowdfunding as a reliable alternative investment mechanism in the evolving digital financial landscape.

³ Associate Professor, Department of MBA, Nagarjuna College of Management Studies,
girishhvkumar@gmail.com, 8892969246

Abstract

The rapid expansion of digital payment systems has transformed the way financial transactions are conducted worldwide. With the increasing use of mobile wallets, online banking, and electronic payment platforms such as PayPal, Google Pay, and PhonePe, digital payments have become more convenient and widely accessible. However, this growth has also led to a significant rise in fraudulent activities, including unauthorized transactions, identity theft, and payment manipulation. Detecting and preventing such fraud has become a major challenge for financial institutions and digital payment providers. Traditional fraud detection methods mainly rely on rule-based systems and manual monitoring, which are often limited in identifying complex and evolving fraud patterns. These systems may fail to detect new types of fraud or may incorrectly flag legitimate transactions as suspicious. To address these limitations, Artificial Intelligence (AI) has emerged as a powerful tool for improving fraud detection in digital payment systems. AI-based fraud detection systems use advanced techniques such as machine learning, pattern recognition, and data analysis to monitor and evaluate transaction activities in real time. By analyzing large volumes of data, these systems can identify unusual patterns and behaviors that may indicate fraudulent activity. AI models also have

the ability to learn from past transactions and continuously improve their accuracy over time. This study explores the role of AI in detecting and preventing fraud in digital payment systems. It highlights how AI technologies can enhance security, reduce financial losses, and improve the reliability of digital financial services. The research also emphasizes the importance of adopting intelligent fraud detection mechanisms to ensure safe and secure digital transactions in the rapidly evolving digital economy.

Big Data and Artificial Intelligence in Finance: Transforming Financial Decision-Making

Nandan N¹, Harshith Babu V S²

¹2nd Year Student, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura, nandanngv2003@gmail.com .

²Assistant Professor, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura, harsithbabu.vs@gmail.com .

Abstract

The rapid advancement of digital technologies has led to an unprecedented growth in financial data, creating new opportunities for organizations to enhance decision-making processes. In this context, Big Data and Artificial Intelligence (AI) have emerged as transformative technologies that significantly influence financial analysis, risk assessment, and strategic decision-making. Financial institutions generate massive volumes of structured and unstructured data from various sources such as financial transactions, market activities, customer interactions, and online platforms. Traditional data processing methods are often insufficient to manage and analyze such complex datasets effectively. Therefore, the integration of Big Data technologies with Artificial Intelligence has become essential for extracting meaningful insights and improving financial decision-making. Big Data technologies enable financial institutions to collect, store, and process vast amounts of information from diverse sources in real time. Artificial Intelligence, including machine learning, natural language processing, and predictive analytics, enhances the ability to analyze these datasets and identify hidden

patterns, correlations, and market trends. Together, these technologies allow financial organizations to perform advanced analytics, automate complex processes, and support data-driven financial strategies. As a result, financial institutions can improve operational efficiency, enhance customer services, and strengthen risk management practices. The application of Big Data and AI in finance has expanded across several areas such as fraud detection, algorithmic trading, credit risk assessment, portfolio management, and personalized financial services. AI-driven models can analyze large datasets to detect unusual financial transactions, predict market fluctuations, and assist investors in making informed investment decisions. Additionally, financial institutions utilize predictive analytics to evaluate customer creditworthiness and minimize financial risks. Despite these benefits, the adoption of Big Data and AI in finance also presents several challenges, including data privacy concerns, regulatory compliance issues, data quality management, and the need for skilled professionals. Addressing these challenges is essential for ensuring responsible and effective implementation of these technologies. Overall, the integration of Big Data and Artificial Intelligence has the potential to revolutionize financial decision-making by enabling organizations to leverage data-driven insights for improved performance, strategic planning, and long-term financial sustainability.

Role of Financial Institutions in the Development and Stability of financial markets.

Priyanka N A¹

¹2nd year student, Department of MBA, Nagarjuna college of Management studies,
Chikkaballapura, priyankana132003@gmail.com, 9886558290

Abstract

Financial institutions play a crucial role in promoting the development and stability of financial markets by facilitating the efficient allocation of financial resources, managing risks, and maintaining market confidence. The purpose of this study is to examine the role of financial institutions in strengthening financial markets and ensuring their long-term stability. It focuses on how institutions such as banks, insurance companies,

investment firms, and regulatory bodies contribute to market growth, liquidity, and investor protection. This study adopts a conceptual and descriptive research methodology, primarily based on secondary data collected from academic journals, financial reports, policy documents, and existing literature on financial markets. The research analyzes theoretical perspectives and previous empirical studies to understand the functions and influence of financial institutions in market development. The study also reviews regulatory frameworks and institutional practices that support market efficiency and reduce systemic risks. The findings of the study indicate that financial institutions significantly contribute to financial market development by providing capital intermediation, enhancing market liquidity, and facilitating investment opportunities for individuals and businesses. Furthermore, these institutions help maintain financial stability through effective risk management, financial regulation compliance, and transparency in financial transactions. The presence of strong financial institutions also builds investor confidence, promotes economic growth, and reduces the chances of financial crises. The study highlights that well-regulated and efficiently functioning financial institutions are essential for sustainable financial market growth. Strengthening regulatory oversight, improving institutional governance, and adopting technological innovations can further enhance market stability. The research contributes to a better understanding of how institutional mechanisms support the functioning of financial markets and offers insights for policymakers, regulators, and financial practitioners.

Talent Management Practices and Their Impact on Succession Planning

Smitha K R¹, Mr. Harshith Babu V S²

¹2nd year Student, Department of MBA, Nagarjuna College of Management Studies –
Chikkaballapura, Smithakr553@gmail.Com

²Assistant Professor, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura, harsithbabu.vs@gmail.com

Abstract

Talent management and succession planning have become critical strategic priorities for organizations seeking to sustain long-term competitiveness and leadership continuity. In

an increasingly dynamic and competitive business environment, organizations must effectively identify, develop, and retain high-potential employees to ensure a steady pipeline of capable leaders. This study examines talent management practices and their impact on succession planning within organizations. The primary purpose of the research is to analyse how structured talent management strategies contribute to the effectiveness of succession planning processes and organizational stability. The study adopts a quantitative research approach, utilizing a structured questionnaire to collect data from employees and managers across selected organizations. A sample of respondents from various departments and managerial levels was chosen to provide comprehensive insights into existing talent management practices. Statistical techniques such as descriptive analysis and correlation analysis were applied to evaluate the relationship between talent management practices—including talent identification, employee development, performance management, and retention strategies—and succession planning effectiveness. The findings of the study indicate a strong positive relationship between effective talent management practices and successful succession planning. Organizations that implement systematic talent identification, continuous training and development programs, and performance-based career advancement opportunities demonstrate greater preparedness for leadership transitions. Furthermore, the results highlight that organizations with well-structured talent management frameworks experience reduced leadership gaps, improved employee engagement, and enhanced organizational sustainability. The study underscores the importance of integrating talent management strategies with succession planning to ensure long-term organizational growth and stability. By fostering a culture of continuous learning and leadership development, organizations can build a robust internal talent pipeline capable of meeting future leadership demands. The research contributes to the existing literature by emphasizing the strategic role of talent management in strengthening succession planning systems and supporting sustainable organizational development.

A Conceptual Study on Artificial Intelligence in Business Intelligence Systems

Ms. Sneha N¹

¹2nd year Student, Department of MBA, Nagarjuna College of Management Studies –
Chikkaballapura, Snehareddy983@gmail.com, 9019031565

Abstract

The rapid expansion of digital technologies has led to a significant increase in the volume and complexity of data generated by modern organizations. As a result, businesses require more advanced systems to transform large amounts of data into meaningful insights for effective decision-making. Traditional Business Intelligence (BI) systems have been widely used to collect, organize, and present business data through reports, dashboards, and visualization tools that support managerial decisions. However, the growing scale and diversity of organizational data have made it difficult for conventional BI tools to uncover complex relationships or provide accurate predictions about future trends. In this context, the integration of Artificial Intelligence (AI) into Business Intelligence systems has gained attention as a promising solution for improving analytical capabilities and enhancing organizational performance. This conceptual research paper explores the role of AI in strengthening BI systems and enabling more intelligent data analysis. Technologies such as machine learning, natural language processing, and automated data analysis allow BI platforms to move beyond simple data reporting toward predictive and prescriptive analytics. Through the use of these AI-driven techniques, organizations can automatically examine large datasets, detect hidden patterns, forecast potential outcomes, and generate useful recommendations that assist managers in making informed decisions. The incorporation of AI also improves the accessibility and usability of BI systems by introducing interactive features such as conversational queries and automated reporting, which make analytical insights easier to understand for both technical and non-technical users. Furthermore, AI-powered BI systems can support various organizational activities, including customer behavior analysis, operational optimization, market trend identification, and risk management. Despite these advantages, the adoption of AI in

Business Intelligence also presents several challenges, including concerns related to data quality, privacy protection, technological complexity, and the requirement for skilled professionals who can manage advanced analytical tools. This study conceptually examines these opportunities and challenges and highlights the strategic importance of integrating AI technologies within BI frameworks. The paper suggests that organizations can enhance their decision-making capabilities and improve business outcomes by effectively combining AI with traditional BI systems. Overall, the integration of Artificial Intelligence and Business Intelligence represents an important development in modern data analytics, enabling organizations to utilize their data resources more efficiently and maintain a competitive position in an increasingly data-driven business environment.

Keywords: *Artificial Intelligence (AI), Business Intelligence (BI), Machine Learning, Predictive Analytics, Prescriptive Analytics, Decision Support Systems, Data Mining, Natural Language Processing (NLP).*

Importance Of ESG For Sustainable Growth of Nation

Abstract:

Environmental, Social, and Governance (ESG) practices have become an essential component of modern corporate strategies as organizations increasingly recognize their role in promoting sustainability and long-term value creation. This research study examines the impact of ESG practices on corporate sustainability and financial performance. The purpose of the study is to understand how ESG integration influences organizational decision-making, stakeholder relationships, and long-term growth. The study adopts a qualitative research approach based on secondary data collected from academic journals, corporate sustainability reports, and existing research papers. Through a systematic review of relevant literature, the study analyzes how environmental

responsibility, social accountability, and governance transparency contribute to improved business performance and corporate reputation. The findings suggest that companies that adopt strong ESG frameworks tend to achieve higher operational efficiency, better risk management, improved investor confidence, and enhanced brand value. Environmental initiatives such as reducing carbon emissions and promoting renewable energy contribute to sustainable resource management. Social practices including employee welfare, diversity, and community engagement strengthen stakeholder trust. Governance factors such as ethical leadership, board accountability, and transparency enhance corporate credibility and investor confidence. Furthermore, the study highlights that ESG implementation is increasingly influencing investment decisions as institutional investors prefer companies with strong sustainability practices. Despite the growing importance of ESG, challenges such as inconsistent reporting standards and lack of uniform measurement frameworks still exist. The research concludes that integrating ESG principles into corporate strategies not only promotes environmental and social responsibility but also improves long-term financial performance and organizational sustainability. The study provides valuable insights for managers, policymakers and investors seeking to incorporate ESG considerations into business strategies and investment decisions.

³ Associate Professor, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura, girishhvkumar@gmail.com

Abstract

Micro, Small, and Medium Enterprises (MSMEs) constitute the backbone of India's economy, contributing approximately 30% to GDP, over 45% to exports, and employing more than 110 million people, particularly in labor-intensive sectors. This study examines the MSME ecosystem—encompassing policy frameworks, technological adoption, industrial structures, market linkages, and export mechanisms—and its broader implications for economic growth and employment generation. Drawing on secondary data from the Ministry of Statistics and Programmed Implementation (MoSPI), Annual Survey of Industries (ASI), RBI financial reports, and Udyam registration portal (2019-2025), the research employs a mixed-method approach: econometric modeling (panel regressions and Input-Output analysis) to quantify growth impacts, technological audits via Digital Maturity Index frameworks, and qualitative policy evaluation through SWOT and convergence scheme assessments. Key findings indicate that MSMEs have demonstrated resilience post-COVID, with a 15-20% productivity surge driven by digital initiatives like TReDS, UPI ecosystems, and PM SVANidhi credit guarantees, reducing NPAs by 25% and tripling exports in select clusters. However, structural challenges persist: a ₹25-30 lakh crore credit gap hampers 40% of micro-units, regulatory compliance burdens stifle 60% of formalization efforts, and low technology penetration (only 28% digital ready) exacerbates vulnerability to global supply chain disruptions and climate risks. Employment generation remains robust at 62% of non-farm jobs, yet skill mismatches limit quality job creation to 12-15% in high-growth segments like green manufacturing. The analysis reveals that policy convergence—integrating schemes like Credit Guarantee Fund Trust for Micro and Small Enterprises (CGTMSE) with Atmanirbhar Bharat 3.0—could unlock ₹10 lakh crore in investments, boosting GDP contribution by 5-7% by 2030. Recommendations advocate for AI-driven credit scoring, blockchain-based compliance, and sustainability-linked green bonds to enhance financial inclusion and resilience. This study underscores MSMEs' pivotal role in achieving Viksit Bharat@2047, offering actionable insights for policymakers to foster inclusive, technology-led growth amid geopolitical uncertainties. Micro: Investment <₹2.5crore; Turnover <₹10crore. Small : investment <₹25crore; Turnover <₹100crore. Medium: Investment <₹125crore; Turnover <₹500crore.

Keywords: *MSME ecosystem, economic growth, employment generation, financial inclusion digital transformation, sustainability, exports, India*

Financial Literacy and Its Role in Enhancing Individual Financial Well-Being in the Modern Economy.

Sushmitha S¹, Dr Girish Kumar H V²

¹2nd Year Student, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapur, sushmithasushu792@gmail.com

²Associate Professor, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapur, girishhvkumar@gamil.com

Abstract

Financial literacy has emerged as an essential life skill in the contemporary economic environment where individuals are required to make complex financial decisions related to saving, investment, borrowing, and retirement planning. It refers to the knowledge, skills, and confidence required to understand financial concepts and effectively manage personal financial resources. The increasing availability of financial products, digital banking services, and investment opportunities has made financial literacy more important than ever for individuals and households. According to Organisation for Economic Co-operation and Development (OECD), financial literacy enables individuals to make informed financial decisions that improve their long-term financial security and well-being (OECD, 2020). The purpose of this study is to examine the significance of financial literacy in shaping responsible financial behaviours and improving financial stability among individuals. Financial literacy includes understanding key financial concepts such as budgeting, saving, investment diversification, interest rates, inflation, and risk management. Studies indicate that individuals with higher financial literacy tend to plan better for retirement, manage debt effectively, and demonstrate stronger financial resilience during economic uncertainties (Lusardi & Mitchell, 2014). Furthermore, financial literacy plays a crucial role in promoting financial inclusion and economic development. Educated consumers are better able to utilize financial services such as banking, insurance, and digital payment systems. In developing economies, improving financial literacy can reduce poverty, enhance entrepreneurial activity, and encourage responsible borrowing and saving behaviours (Atkinson & Messy, 2012). Despite its importance, many individuals across the world still lack adequate financial knowledge, which often leads to poor financial decisions, excessive debt, and insufficient savings.

Therefore, governments, educational institutions, and financial organizations must collaborate to promote financial education programs that enhance financial capability among citizens.

Studies, girishkumar.hv@gmail.com, 8892969246

Abstract:

The rapid growth of smartphones and mobile internet usage has significantly transformed the advertising landscape, making mobile advertising one of the most influential marketing communication tools in the digital economy. Mobile devices have become integral to consumers' daily lives, enabling marketers to reach audiences anytime and anywhere through personalized and interactive advertising strategies. Mobile advertising has evolved from simple banner advertisements to highly sophisticated formats such as location-based advertising, in-app advertising, augmented reality (AR) advertising, artificial intelligence (AI)-driven targeting, and programmatic advertising. These innovative strategies allow marketers to deliver personalized content, analyze consumer behavior in real time, and optimize advertising campaigns based on data-driven insights. However, despite these opportunities, mobile advertising also faces challenges such as privacy concerns, ad fatigue, and increasing use of ad blockers. The study concludes that innovative mobile advertising strategies play a critical role in modern marketing by

improving targeting accuracy, enhancing user experience, and strengthening brand–consumer relationships. As mobile technology continues to evolve, businesses must adopt innovative and responsible advertising approaches to remain competitive in the dynamic digital marketplace.

The effectiveness of online advertising in shaping consumer decision making

Chethan M¹, Adarsh B²,

[1][2]1st Year Student, Department of MBA, Nagarjuna College of Management Studies,
Chethangowda25576@gmail.com, 9980955916

Abstract:

Online advertising has become an essential component of modern marketing strategies due to the widespread use of the internet and digital technologies. This study examines the effectiveness of online advertising in shaping consumer decision-making behavior in the digital marketplace. The primary objective of the research is to analyze how different forms of online advertising —such as social media advertisements, display ads, search engine marketing, and video promotions—influence consumer awareness, attitudes, and purchase intentions. A quantitative research approach was adopted, and data were collected through structured questionnaires distributed among active internet users. The collected data were analyzed using statistical techniques to identify relationships between exposure to online advertisements and consumer purchasing decisions. The findings indicate that online advertising significantly affects consumer behavior by increasing product awareness, improving brand perception, and encouraging purchase intentions. Among the various forms of online advertising, social media advertisements and personalized ads were found to have the strongest influence on consumer engagement. The study also reveals that factors such as advertisement credibility, relevance, visual appeal, and consumer trust play a crucial role in determining the effectiveness of online advertisements. However, the research highlights certain challenges, including

advertisement overload and privacy concerns, which may negatively influence consumer attitudes toward digital advertising.

³Assistant Professor, Department of MBA, Nagarjuna College of Management Studies

Abstract

Employee motivation plays a crucial role in improving organizational performance and achieving long-term business success in modern organizations. Motivated employees generally demonstrate higher levels of commitment, productivity, creativity, and job satisfaction, which directly contribute to better organizational outcomes and overall business growth. The main objective of this study is to examine the relationship between employee motivation and organizational performance and to understand how different motivational factors influence employee efficiency, engagement, and workplace productivity. This study adopts a descriptive research design and utilizes both primary and secondary sources of data to provide a comprehensive understanding of the research problem. Primary data are collected through structured questionnaires distributed among employees working in different departments of organizations to understand their motivational levels and work performance. Secondary data are collected from academic journals, textbooks, research articles, and previously published studies related to human resource management and organizational behavior. The collected data are analyzed using statistical tools such as percentage analysis and correlation techniques to identify the relationship between employee motivation and organizational performance. The findings of the study reveal that employees who are properly motivated tend to show improved job performance, increased productivity, stronger commitment to organizational goals,

and greater involvement in their work activities. Several factors such as financial incentives, recognition and appreciation, opportunities for career growth and development, supportive leadership, and a positive and healthy work environment significantly influence employee motivation in organizations. Organizations that implement effective motivational strategies are more likely to experience higher employee engagement, improved workforce productivity, and better overall organizational performance. The study emphasizes the importance of motivational practices in modern organizational management and highlights the need for managers and human resource professionals to design effective motivational strategies that encourage employees to perform at their highest potential. By creating a supportive and motivating work environment, organizations can achieve higher efficiency, improved employee satisfaction, and long-term sustainable competitive advantage.

Study on Employer Branding and its impact on Talent Acquisition

Sindhu G L¹, Rakshith Gowda K M²

¹2nd Year Student, Department of MBA, Nagarjuna College of Management Studies, sindhugowda685@gmail.com

²Assistant Professor, Department of MBA, Nagarjuna College of Management Studies

Abstract

Employer branding has become a crucial strategic tool for organizations seeking to attract and retain talented employees in an increasingly competitive labor market. This study examines how employer branding influences talent acquisition, focusing on factors such as organizational image, employer value proposition, and communication strategies that shape potential employees' perceptions and their intention to apply for jobs. Using a mixed-method research design, the study collected primary data through structured questionnaires from job seekers and HR professionals across different industries, along with semi-structured interviews with human resource managers, while secondary data were obtained from academic journals, organizational reports, and existing HR and branding literature. Statistical techniques such as correlation and regression analysis were applied to evaluate the relationship between employer branding elements and candidates' job preferences and application intentions. The findings indicate that strong employer

branding significantly improves an organization's ability to attract high-quality candidates, reduce recruitment costs, and shorten hiring cycles. Key determinants influencing candidates include organizational reputation, career development opportunities, workplace culture, and the effective communication of employer value propositions through digital platforms and social media. Overall, the study highlights that organizations with clearly defined and consistently communicated employer brands gain a competitive advantage in the talent market, demonstrating that employer branding is not merely a marketing concept but a vital strategic approach for improving talent acquisition and supporting sustainable workforce development.

Marketing Analytics: Impact of Social Media Marketing on Consumer Buying Behaviour

Sneha G¹, Dr. Girish Kumar H V²

¹2nd Year Student, Department of MBA, Nagarjuna College of Management Studies,
sneha369996@gmail.com

²Associate Professor Department Of MBA, Nagarjuna College of Management
Studies, girishhvkumar@gmail.com, 8892969246

Abstract

The development of digital technology has significantly changed the way businesses communicate with consumers. Among these technological advancements, social media marketing has become one of the most influential tools for promoting products and services. Platforms such as Instagram, Facebook, YouTube, and Twitter enable companies to reach a large audience, interact with customers, and create brand awareness in a more engaging manner. This study focuses on analysing how social media marketing affects consumer buying behaviour and purchasing decisions. Social media provides consumers with easy access to product information, reviews, recommendations, and promotional content. Many consumers rely on online opinions, influencer endorsements,

and user-generated content before making a purchase. These factors play an important role in shaping consumer attitudes, trust, and preferences toward different brands. Social media also allows businesses to deliver personalized advertisements and interactive content, which increases consumer interest and engagement. Furthermore, the continuous exposure to marketing messages on social media platforms strengthens brand recognition and influences consumers to consider specific products while making purchasing decisions. The ability of social media to create direct communication between companies and consumers also improves customer relationships and satisfaction. When brands provide reliable information and maintain transparency in their communication, consumers are more likely to develop trust and loyalty toward those brands. Social media marketing has a strong influence on consumer buying behaviour by shaping awareness, perceptions, and purchase intentions. Effective use of social media platforms can help businesses attract potential customers, build stronger brand connections, and improve overall marketing performance in the competitive digital environment.

³Assistant Professor . Department of MBA, Nagarjuna college of
management studies

Abstracts

The rapid advancement of generative artificial intelligence (GenAI) has significantly transformed the global software industry and influenced investor behavior in financial markets. This study investigates the impact of generative AI adoption on market efficiency, focusing on the software sector rotation observed in 2026. As software firms

increasingly integrate GenAI capabilities into their products and services, investors have shifted their capital allocation toward companies perceived as leaders in AI innovation. This research examines how announcements and adoption of generative AI technologies affect stock price behavior, trading volume, and information diffusion in the market. The results indicate that companies actively investing in generative AI technologies experienced positive abnormal returns and increased investor attention, suggesting faster incorporation of new information into stock prices. This pattern supports the view that technological innovation can enhance aspects of market efficiency. Overall, the study highlights the growing role of generative AI as a catalyst for structural changes in financial markets. It provides insights into how emerging technologies influence capital allocation, investor expectations, and the efficiency of market pricing in technology-driven sectors.

Studies, pallavisrinivas.347@gmail.com, 9986491675

³Associate Professor Department Of MBA, Nagarjuna College of Management
Studies, girishhvkumar@gmail.com, 8892969246

Abstract

Sustainability branding has become an important strategy in modern marketing as companies respond to growing environmental concerns, social responsibility expectations, and ethical consumption trends. Among different consumer groups, Generation Z (Gen Z) shows a strong preference for value-driven purchasing decisions. Growing up in a digital and socially aware environment, Gen Z consumers evaluate brands not only based on product quality and price but also on their environmental and

social impact. Sustainability branding involves integrating environmental responsibility, ethical sourcing, social equity, and transparent communication into a brand's core identity. Unlike traditional branding that focuses mainly on product differentiation, sustainability branding aims to build long-term trust and meaningful relationships with consumers. This study conceptually examines how sustainability branding influences Gen Z purchase intentions by using key marketing and behavioural theories. The framework of the study is based on the Theory of Planned Behavior, Social Identity Theory, and Signalling Theory. These theories explain how consumer attitudes, identity expression, and credibility signals affect purchasing decisions. The study suggests that sustainability branding can positively influence purchase intention through psychological factors such as brand trust, perceived authenticity, and emotional engagement. The analysis also highlights that Gen Z consumers are highly sensitive to authenticity and transparency. Brands that communicate sustainability efforts clearly and consistently tend to gain stronger trust and positive attitudes. However, misleading environmental claims or greenwashing can reduce brand credibility. Digital platforms and social media play an important role in shaping Gen Z perceptions, as consumers often rely on online information and peer reviews before making purchase decisions. Overall, sustainability branding should be viewed as a long-term strategic commitment rather than a simple marketing tactic. Integrating sustainability into core business operations can strengthen brand trust, influence purchase intention, and create competitive advantage in youth-driven markets.

Keywords:

Sustainability Branding, Generation Z, Purchase Intention, Brand Trust, Brand Authenticity, Green Marketing, Consumer Behaviour

Digital Transformation in Human Resource Management. The Strategic Role of Artificial Intelligence in Modern Organizations.

³ Assistant Professor . Department of MBA, Nagarjuna college of management studies

Abstract

The adoption of Artificial Intelligence (AI) within Human Resource Management (HRM) signifies a major transformation in organizational operations. AI-powered systems such as predictive analytics, natural language processing, robotic process automation, and intelligent chat interfaces are redefining conventional HR practices. These technologies enable organizations to streamline processes, enhance decision accuracy, and shift HR from an administrative role to a strategic partner. This study explores the influence of AI-driven solutions on core HR functions including recruitment and selection, learning and development, employee engagement, performance appraisal, and workforce planning. It evaluates how intelligent algorithms assist in resume parsing, candidate matching, behavioral analysis, and real-time performance monitoring. The research further highlights the strategic advantages of AI adoption, such as improved hiring quality, minimized human bias, operational cost reduction, and enhanced employee experience. At the same time, the paper critically examines the challenges linked to AI integration, including ethical implications, privacy concerns, transparency issues in algorithmic decisions, and the potential loss of interpersonal interaction. The study proposes a responsible implementation framework that balances technological efficiency with human values and organizational culture. The findings indicate that AI-supported HR systems can significantly strengthen talent management and organizational agility when applied with ethical oversight and strategic planning.

Role of Content Marketing in Enhancing Brand Awareness

Varun B R¹, Dr Girish Kumar H V²

¹ 1st Year Student, Department of MBA, 9113810281, bvarun889@gmail.com

² Associate Professor, Department of MBA, Nagarjuna college of management studies

Abstract

In the digital era, businesses use different marketing strategies to attract customers and increase their brand visibility. One of the most effective strategies is content marketing. Content marketing means creating and sharing valuable, relevant, and useful information to attract and engage customers. Unlike traditional marketing that focuses on direct advertising, content marketing provides helpful information that educates and entertains the audience. This helps businesses build trust and long-term relationships with customers. Brand awareness is very important for the success of any business. It means how well customers can recognize and remember a brand. In today's competitive market, companies must use effective methods to make their brand stand out. Content marketing helps achieve this by sharing engaging content through digital platforms such as social media, blogs, websites, videos, and email newsletters. These platforms help businesses communicate their brand message to a larger audience. This study examines how content marketing improves brand awareness among consumers. Different types of content like blog posts, articles, videos, infographics, and social media posts help people learn about a brand and remember it. High-quality content builds credibility and creates a positive image of the brand.

Abstract

Personalized digital advertising has become an important strategy for organizations seeking to improve customer engagement and strengthen brand loyalty in the rapidly evolving digital marketing environment. With the advancement of technologies such as big data analytics, artificial intelligence, and consumer tracking tools, companies can deliver customized advertisements based on individual preferences, browsing behaviour, and purchase history. Personalized advertising enhances the relevance of marketing communication, enabling firms to establish meaningful interactions with consumers across digital platforms. Recent studies indicate that nearly 80% of consumers are more likely to purchase from brands that provide personalized experiences, highlighting the growing importance of targeted marketing strategies in influencing consumer behaviour (Forbes). Additionally, research by McKinsey & Company reports that companies implementing effective personalization strategies can achieve 10–15% higher revenue growth and significantly improved customer engagement levels. Personalized advertising also contributes to stronger brand relationships, as consumers are more likely to interact with and remain loyal to brands that deliver relevant and timely promotional messages. However, the increasing use of consumer data for targeted advertising also raises concerns regarding privacy, transparency, and ethical marketing practices. In this context, the present study examines the impact of personalized digital advertising on customer engagement and brand loyalty, focusing on how tailored promotional content influences consumer interaction, brand perception, and long-term loyalty in the digital marketplace. The findings of the study are expected to provide insights for marketers in developing effective and responsible digital advertising strategies.

³Assistant Professor, Department of MBA, Nagarjuna College of Management Studies

Abstract

The rapid advancement of digital technologies has significantly transformed the nature of work and skill requirements across industries. Organizations are increasingly facing challenges in adapting their workforce to technological changes such as automation, artificial intelligence, and digital transformation. In this context, reskilling and upskilling have become essential strategies for developing employee competencies and maintaining organizational competitiveness. This study explores the importance of reskilling and upskilling initiatives in the digital era and their role in enhancing employee productivity, adaptability, and career growth. The research examines how organizations implement training and development programs to bridge skill gaps and prepare employees for emerging job roles. Using secondary data from academic journals, industry reports, and organizational case studies, the study analyzes the impact of continuous learning on workforce development and organizational sustainability. The findings highlight that effective reskilling and upskilling programs improve employee engagement, reduce skill shortages, and support innovation within organizations. Furthermore, the study emphasizes the need for businesses to adopt proactive learning strategies and invest in digital training programs to remain competitive in a rapidly evolving business environment. The research concludes that continuous skill development is a key factor in achieving long-term organizational success in the digital economy. The findings of the study indicate that reskilling and upskilling programs play a crucial role in improving employee productivity, enhancing digital competencies, and increasing workforce adaptability. Organizations that actively invest in continuous learning initiatives are better equipped to respond to technological disruptions and maintain a competitive advantage. Moreover, such initiatives contribute to higher employee engagement, improved job

satisfaction, and long-term career development. The study also highlights that strategic investment in employee learning and development supports innovation and organizational growth.

Industry 5.0: Integrating Human Intelligence with Advanced Automation

Bindushree BM¹, Chaithra K L²

^{1,2}Student, Nagarjuna College of Management Studies, Chikkaballapura,

E-mail:bindushree976@gmail.com, 6360455584, 9141663431

Abstract:

Industry 5.0 represents the next stage in industrial evolution, shifting the focus from purely automated systems to a more human-centric approach where human intelligence collaborates with advanced technologies. Unlike earlier industrial revolutions that emphasized automation and efficiency, Industry 5.0 promotes the integration of human creativity, critical thinking, and decision-making with intelligent machines such as artificial intelligence, robotics, and cyber-physical systems. This collaboration enhances productivity while maintaining the unique strengths of human workers. Through effective human-machine interaction, Industry 5.0 enables industries to achieve mass customization, greater production flexibility, and improved workplace safety. Advanced technologies assist and augment human capabilities rather than replace them, combining the speed and precision of machines with human innovation and adaptability. Furthermore, Industry 5.0 supports sustainable and resilient manufacturing systems by optimizing resource utilization and reducing environmental impact. As industries continue to evolve toward smart manufacturing ecosystems, the Industry 5.0 paradigm ensures that technological advancement aligns with human well-being and sustainable development. By integrating human intelligence with advanced automation, organizations can achieve higher efficiency, innovation, and long-term industrial growth.

AI-driven student performance prediction system using machine learning and educational data analytics

N.Ranganath¹ , Pranay HR²

^{1,2}Student, 2nd year MCA, Nagarjuna College of Management Studies, E-Mail:

nathranganath09@gmail.com, Ph.No : 9177022703

Abstract:

Educational institutions generate large volumes of student data that can be analyzed to improve academic performance and support effective decision-making. Predicting student performance at an early stage helps educators identify students who may require additional academic support. This research proposes an “AI-driven student performance prediction system using machine learning and educational data analytics”. The proposed system analyzes various academic and behavioral factors such as attendance, study hours, assignment scores, internal assessment marks, and previous academic results. Data preprocessing techniques including data cleaning, normalization, and feature selection are applied to improve the quality of the dataset. Several machine learning algorithms such as Logistic Regression, Decision Tree, and Random Forest are used to build predictive models for analyzing student performance. The system is implemented using Python programming language with machine learning libraries such as Pandas and Scikit-learn. Experimental results show that the Random Forest algorithm provides higher prediction accuracy compared to other models. The proposed approach helps educational institutions identify at-risk students and take timely intervention measures to improve academic outcomes.

SECURITY AND PRIVACY ISSUES

Chandrika .V¹ & R. Deekshitha²

^{1,2}Students, 2nd year MCA(3rdsem), Nagarjuna College of Management Studies,

Email Id:Chandrikavrajurs@gmail.com(9164757890)

ABSTRACT :

With the rapid advancement of digital technologies, enormous amounts of data are continuously generated, stored, and shared across various digital platforms such as cloud computing, social media networks, and Internet-connected devices. While these technologies have improved communication, data processing, and decision-making, they have also introduced significant security and privacy challenges. Security issues mainly arise due to **unauthorized access, data breaches, malware attacks, phishing, and vulnerabilities present in networks, software systems, and databases**. These threats can lead to the loss, theft, or manipulation of sensitive information, causing serious consequences for individuals, organizations, and governments. In addition to security concerns, privacy has become a major issue in the digital environment. Large amounts of personal data are collected, processed, and shared by various digital services, often without the full knowledge or explicit consent of users. This may result in the misuse of personal information, identity theft, unauthorized profiling, and surveillance. The problem becomes more complex with the increasing adoption of advanced technologies such as **Big Data Analytics, Artificial Intelligence (AI), and the Internet of Things (IoT)**, where vast volumes of personal and behavioral data are analyzed and transmitted through interconnected systems. To address these challenges, organizations must implement strong cybersecurity strategies and protective mechanisms such as encryption, authentication systems, access control policies, and secure network architectures. In addition, the implementation of effective privacy policies, data governance frameworks, and legal regulations such as data protection laws plays an important role in safeguarding personal information and ensuring responsible data usage.

Abstract:

Artificial Intelligence (AI) and Machine Learning (ML) are rapidly transforming the way technology is used in modern society. These technologies enable machines to learn from data, identify patterns, and make intelligent decisions with minimal human intervention. In recent years, AI and ML have become essential components in many emerging technologies such as autonomous vehicles, smart healthcare systems, recommendation systems, robotics, and intelligent virtual assistants. This research paper discusses the fundamental concepts of Artificial Intelligence and Machine Learning and explores how they contribute to the development of emerging technologies. It highlights various real-world applications including healthcare diagnosis, fraud detection in banking, personalized recommendations in entertainment platforms, smart agriculture, and automation in industries. The paper also examines the benefits of AI and ML, such as improved efficiency, accuracy, and decision-making capabilities. At the same time, it addresses important challenges including data privacy, ethical concerns, and the need for skilled professionals in the field.

³Assistant Professor Department of MBA, Nagarjuna College of Management Studies

Abstract

Influencer marketing has become an essential component of digital marketing strategies in India due to the rapid growth of social media platforms and the increasing engagement of online consumers. With the expansion of platforms such as Instagram, YouTube, and other social networking sites, brands are increasingly collaborating with influencers to promote their products and services. This study aims to analyze the emerging trends in influencer marketing in India by examining insights obtained from various industry reports. The main objective of the research is to understand how brands utilize influencers for marketing communication, identify the key trends influencing the growth of influencer marketing and evaluate its impact on consumer behavior and brand engagement. The research is based on secondary data collected from multiple sources, including industry reports, market research publications, digital marketing agency reports, academic journals, and credible online platforms. Reports published by marketing organizations and social media analytics companies were reviewed to understand the patterns, strategies, and developments within the influencer marketing ecosystem in India. The collected information was analysed using qualitative content analysis to interpret key insights, identify recurring themes, and understand the evolving role of influencers in digital marketing. The findings of the study reveal that influencer marketing in India has experienced rapid growth in recent years. The increasing popularity of micro and nano influencers has become a significant trend, as they often maintain stronger connections with their audiences and generate higher engagement rates. Additionally, brands are focusing more on authentic, relatable content rather than purely promotional messages.

AI & ML in the Modern Era: Innovations, Technologies, and Applications

Punith B¹

¹Department of Computer Application, Nagarjuna College of Management Studies

7019051231, Email ID:punithb35@gmail.com

Abstract:

Artificial Intelligence (AI) and Machine Learning (ML) have emerged as transformative forces in the modern era, driving innovation across industries and reshaping the way humans interact with technology. This paper explores the evolution, core concepts, and recent advancements in AI and ML, highlighting their role in enabling intelligent systems capable of learning, reasoning, and decision-making. The study examines key technologies such as deep learning, natural language processing, computer vision, and reinforcement learning, emphasizing their contributions to solving complex real-world problems.

Furthermore, the paper investigates the integration of AI and ML in various domains, including healthcare, finance, transportation, education, and smart cities. It discusses how these technologies enhance efficiency, accuracy, and scalability, while also addressing challenges such as data privacy, ethical concerns, algorithmic bias, and interpretability. Special attention is given to emerging trends, including explainable AI (XAI), edge AI, and the convergence of AI with the Internet of Things (IoT) and blockchain technologies. The research also highlights the importance of responsible AI development, focusing on transparency, accountability, and fairness in automated systems. By analyzing current applications and future directions, this paper aims to provide a comprehensive understanding of how AI and ML are shaping the technological landscape and influencing socio-economic development.

In conclusion, AI and ML are not only technological advancements but also catalysts for innovation, offering significant opportunities for growth and transformation. However, their successful implementation requires addressing ethical, technical, and regulatory challenges to ensure sustainable and inclusive development.

Big Data Analytics in Healthcare Systems

Madhan Kumar S¹

¹Department of Computer Application, Nagarjuna College of Management Studies,

Email: madhanms1717@gmail.com

Abstract:

The rapid growth of digital healthcare technologies has led to the generation of massive volumes of medical data, including electronic health records, medical imaging, wearable device data, and genomic information. Big Data Analytics plays a crucial role in transforming this complex and diverse data into meaningful insights that enhance decision-making and improve patient outcomes. This paper explores the application of big data analytics in healthcare systems, focusing on its ability to support clinical decision-making, disease prediction, personalized treatment, and operational efficiency. By leveraging advanced analytical techniques such as machine learning, data mining, and predictive modeling, healthcare providers can identify patterns and trends that were previously difficult to detect. These insights enable early diagnosis of diseases, reduce medical errors, and enhance the quality of care. Furthermore, big data analytics helps in managing hospital resources efficiently, optimizing treatment plans, and reducing healthcare costs. The integration of big data technologies such as Hadoop and cloud computing allows for the storage and processing of large-scale healthcare data in real time. Additionally, analytics-driven approaches support public health management by tracking disease outbreaks and improving preventive care strategies. However, challenges such as data privacy, security concerns, and data integration issues must be addressed to ensure effective implementation.

Security and Privacy Issues in the Digital World

Kishor.M,¹ Dharshan K M¹

¹Student, Computer Science, Nagarjuna College of Management Studies,
6362874921, kishum2005@gmail.com

²Student, Computer Science, Nagarjuna College of Management Studies,
7022658975, harshanmanjunath.km@gmail.com

Abstract:

The rapid growth of digital technologies has significantly changed the way information is created, stored, and shared. While these advancements have improved efficiency and connectivity, they have also introduced serious security and privacy challenges. Security focuses on protecting systems and data from unauthorized access, while privacy ensures that personal information is handled responsibly and remains under user control. This paper examines major security threats such as malware, phishing, data breaches, and denial-of-service attacks, along with privacy concerns arising from excessive data collection and user tracking. It also analyses the causes and impacts of these issues and proposes effective solutions, including encryption, authentication, policy enforcement, and user awareness. The study emphasizes the importance of a combined approach involving individuals, organizations, and governments to ensure a secure and privacy-preserving digital environment.

Abstract:

Digital advertising has emerged as a dominant form of marketing in the modern digital economy. With the rapid expansion of internet access, smartphones, and social media platforms, businesses are increasingly investing in digital advertising to reach a wider and more targeted audience. This study focuses on analyzing the trends in digital advertising spending and the factors influencing organizations to shift their marketing budgets from traditional media to digital platforms. The research highlights how companies utilize channels such as search engines, social media, display ads, and video advertising to promote their products and services effectively. The study also examines the advantages of digital advertising, including cost efficiency, measurable results, audience targeting, and real-time performance tracking. Additionally, it explores the role of data analytics and consumer insights in shaping advertising strategies and improving campaign effectiveness. As competition in the digital marketplace grows, businesses are increasingly relying on personalized and interactive advertisements to enhance customer engagement and brand awareness. The findings of this study indicate that digital advertising spending is continuously increasing as organizations recognize the importance of online presence and digital communication. Therefore, understanding digital advertising spending trends is essential for marketers to develop effective strategies and maintain a competitive advantage in the evolving digital marketing landscape.

nandangowda@gmail.com, Contact No: 93538 48959

³ Associate Professor Department Of MBA, Nagarjuna College of Management Studies,
girishhvkumar@gmail.com, 8892969246

Abstract:

Digital marketplace, advertising plays a crucial role in influencing consumer behavior and brand awareness. However, the impact of advertising is not always immediate; often, its effects persist over time. This phenomenon is known as the advertising carryover effect, which refers to the continued influence of past advertising efforts on current consumer responses, such as brand recall, website visits, and purchase decisions. Measuring the carryover effect is important for marketers because it helps them understand how long an advertisement continues to influence consumers after the initial exposure. In digital marketing, where campaigns run across multiple platforms such as social media, search engines, and display networks, understanding the carryover effect becomes even more significant. Consumers may encounter advertisements multiple times across different channels before making a purchase decision. As a result, marketers must analyze not only the immediate response to advertising but also its delayed impact. Measuring this effect helps organizations optimize advertising budgets, schedule campaigns effectively, and improve return on investment (ROI). Several analytical methods are used to measure the advertising carryover effect in digital marketing. Time-series analysis, econometric models, and distributed lag models are commonly applied to track how advertising exposure influences consumer behavior over a period of time. Digital analytics tools also allow marketers to collect data such as click-through rates, impressions, engagement levels, and conversion rates. By examining patterns in this data, marketers can determine how long the influence of a specific advertisement lasts and how previous campaigns contribute to current performance. Furthermore, modern technologies such as artificial intelligence and machine learning have enhanced the

accuracy of measuring advertising carryover effects. These technologies analyze large volumes of digital data and identify patterns in consumer interactions with advertisements. This enables marketers to predict long-term advertising outcomes and make more informed strategic decisions. Understanding the advertising carryover effect also helps companies avoid underestimating the value of their advertising efforts. If marketers focus only on short-term results, they may incorrectly assume that a campaign was ineffective. However, when the carryover effect is considered, the long-term benefits of advertising become more visible.

Key words: *Advertising carryover, Digital Marketing, Consumer responses,*

Smart River Basin Management Using Data-Driven Modelling and Machine Learning Techniques

Padmapriya S K¹

¹Student, Computer Science, Nagarjuna College of Management Studies, 7022883782, priya363567@gmail.com

Abstract:

River basin management has traditionally relied on physically based process models that use mathematical equations to describe water movement and hydrological processes. While these models have been effective, the increasing availability of large datasets has led to the growing adoption of data-driven modelling approaches. Data-driven models utilize techniques from computational intelligence and machine learning to analyze patterns in hydraulic and hydrologic data, enabling improved prediction and decision-making in complex water systems. This paper introduces the special issue on Data-Driven Modelling and Evolutionary Optimization for River Basin Management and provides an overview of commonly used data-driven techniques. It also discusses the authors' experiences in applying these approaches, highlights current trends, and identifies common challenges and limitations in their implementation. In addition, the paper presents examples of successful applications and outlines key research challenges that need to be addressed to further enhance the effectiveness of data-driven modelling in river basin management.

Managing Workforce Disruption in the Age of AI: Reskilling, Layoffs and Financial and Psychological Implications for Organisations and Employees

Ankitha R¹

¹Student, Department of MBA, Nagarjuna College of Management studies,
Chikkaballpur, ankithacbp@gmail.com , 866599585

ABSTRACT

The rapid integration of Artificial Intelligence (AI) across industries has significantly reshaped organizational structures and workforce dynamics. In recent years, layoffs have frequently been attributed to AI adoption, raising concerns about whether technological advancement is directly displacing human labour or whether deeper strategic and economic factors are driving workforce reduction. This study examines the underlying causes of AI-associated layoffs and evaluates the role of People Management in responding to workforce disruptions. The research explores whether AI is the primary driver of job displacement or whether skill gaps, cost pressures, and organizational restructuring play a more significant role. It further compares the financial implications of reskilling existing employees versus implementing workforce reductions and external hiring. In addition to financial analysis, the study investigates the psychological impact of AI-driven uncertainty on employees, including job insecurity, stress, burnout, and motivation to upskill. Using a combination of employee survey data and secondary industry reports, the findings suggest that AI does not inherently lead to job elimination but rather transforms job roles by automating specific tasks. Layoffs are often influenced by broader cost optimization strategies rather than technology alone. The study highlights that strategic investment in reskilling and workforce redeployment can be more cost-effective and sustainable than large-scale layoffs. Moreover, transparent communication and structured training programs significantly reduce employee anxiety and resistance to

technological change. The paper concludes that effective People Management plays a critical role in balancing financial efficiency with employee well-being during AI-driven transformation. Organizations that adopt a proactive and skill-focused approach are better positioned to achieve long-term workforce stability and competitive advantage.

KEYWORDS: *Artificial Intelligence (AI), Workforce Disruption, Automation, Job Security, Reskilling and Upskilling, Psychological Impact, Employee Perception, and Organizational Adaptation.*

AI-Assisted Financial Performance Analysis Using the DuPont Model: A Study with Reference to Suprajit Group

Kubra¹

¹Nagarjuna College of Engineering Technology, MBA

Email Id: kubrakubbi9844@gmail.com

ABSTRACT:

The study titled “AI-Assisted Financial Performance Analysis Using the DuPont Model: A Study with Reference to Suprajit Group” focuses on evaluating the financial health and profitability of Suprajit Group by integrating the traditional DuPont Analysis framework with modern Artificial Intelligence (AI) techniques. The DuPont Model is a powerful analytical tool that decomposes Return on Equity (ROE) into three interrelated components — Net Profit Margin, Asset Turnover, and Equity Multiplier — thereby providing a detailed view of operational efficiency, asset utilization, and financial leverage. The primary objective of this research is to assess the overall financial performance of Suprajit Group over a period of years through detailed analysis of financial ratios derived from the company’s annual reports. In addition to the traditional DuPont framework, AI-based tools are utilized to enhance data analysis, identify patterns, and improve the accuracy of financial predictions and insights. The study is based on secondary data collected from published financial statements, annual reports, and other reliable sources. The analysis involves computation and interpretation of key financial ratios such as Return on Assets (ROA), Return on Equity (ROE), and leverage ratios,

along with trend analysis to understand the company's financial performance trajectory. The findings of the study reveal the strengths and weaknesses in Suprajit Group's financial structure and highlight key factors influencing profitability and shareholder value. The research concludes that the integration of AI with the DuPont Model provides a more comprehensive and efficient approach to financial performance analysis, supporting better strategic decision-making for management, investors, and analysts.

Abstract:

The contemporary business landscape is increasingly shaped by technological disruption and an unprecedented surge in data generation, compelling organizations to move beyond simple data collection toward systems that produce timely, relevant, and decision-ready intelligence. Business Intelligence (BI) and Analytics have positioned themselves as foundational components of this shift, providing executives and managers with sophisticated capabilities to decode complex information, forecast emerging trends, and synchronize day-to-day operations with long-term strategic priorities. However, while BI adoption continues to accelerate globally, relatively little attention has been given to the precise mechanisms through which these systems evolve from basic reporting tools into powerful instruments of organizational strategy. This study investigates the broader

strategic significance of BI and Analytics across contemporary organizational settings, with particular focus on their practical deployment in areas such as financial planning, marketing intelligence, operational management, and supply chain coordination. Through a rigorous synthesis of current academic literature and real-world organizational evidence, the research explores how businesses utilize analytical capabilities — spanning descriptive, diagnostic, predictive, and prescriptive approaches — to enhance the quality of decisions made, streamline internal processes, and establish lasting competitive advantage. The paper culminates in a practical implementation framework designed around organizational capability assessment, interdepartmental alignment, and sustained investment in analytical competencies — offering actionable direction for leaders, scholars, and policymakers navigating today's data-intensive business environment.

Abstract:

In today's globalized banking environment, retaining customers has become a significant challenge for public sector banks. The adoption of new technologies, improved accessibility, and cost-efficient services play a vital role in attracting and maintaining customers. This study investigates the level of customer satisfaction in public sector banks with respect to awareness, accessibility, cost effectiveness, and various electronic

Customer Relationship Management (e-CRM) tools. It also explores the factors that encourage customers to continue using the services of the same bank. In addition, the study identifies the difficulties faced by customers while accessing electronic banking services and proposes suitable measures to address these issues.

A Study on the Impact of Work-Life Balance on Employee Productivity in the Corporate World

Arifa Sultana¹, Saba Kounian², Mr. Rakshith Gowda K.M³

¹1st Year Student, Department of MBA, Nagarjuna College of Management Studies,
arifasultana172004@gmail.com , 7019468652

²1st Year Student, Department of MBA, Nagarjuna College of Management Studies,
sabaqureshi0218@gmail.com 8147294736

³Assistant Professor, Department of MBA, Nagarjuna College of Management Studies

Abstract:

Work-life balance has become an important concern in the modern corporate environment as employees face major workloads, tight deadlines, and high performance expectations. Maintaining a proper balance between professional responsibilities and personal life is vital for improving employees' well-being and productivity. This study aims to examine the impact of work-life balance on employee productivity in the corporate environment. The research is based on both primary and secondary data sources. Primary data were collected through a structured questionnaire distributed among employees working in corporate organizations, while secondary data were obtained from journals, books, articles, and credible online sources. The study analyses how work-life balance practices such as flexible working hours, office leave policies, remote working opportunities, and supportive organizational culture influence employee performance, job satisfaction, and motivation. The findings indicate that employees who experience a healthy balance between work and personal life tend to show higher levels of job satisfaction, reduced stress, increased productivity and increased commitment

toward their organizations. Effective work-life balance practices help reduce burnout, improve mental well-being, and enhance overall productivity in the organisation. In contrast, poor work-life balance can lead to stress, reduced efficiency, absenteeism, and higher employee turnover. The study highlights the importance of organizational support in promoting work-life balance through flexible policies and employee welfare programs. It concludes that organizations that encourage work-life balance not only improve employee satisfaction but also achieve better productivity and long-term organizational objectives and success.

FinTech in Banking: Transforming the Future of Financial Services.

Aishwarya N¹, Mr. Rakshith Gowda K M²

¹Student, Department of MBA, Nagarjuna College of Management studies,
Chikkaballapura, aishwaryna02@gmail.com.

²Assistant Professor, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapura, rakshithgowda151@gmail.com.

Abstract

The rapid evolution of financial technology (FinTech) has significantly transformed the global banking landscape, reshaping how financial services are delivered, accessed, and managed. This study examines the growing role of FinTech innovations in modern banking systems and their impact on operational efficiency, customer experience, and financial inclusion. FinTech solutions such as digital payments, mobile banking applications, blockchain technologies, artificial intelligence, and peer-to-peer lending platforms have enabled banks to streamline processes, reduce transaction costs, and provide faster and more personalized services to customers. The research adopts a qualitative and analytical approach by reviewing recent academic literature, industry reports, and case studies related to FinTech integration in banking institutions. The findings indicate that FinTech adoption enhances banking performance by improving service accessibility, increasing transaction speed, and promoting transparency in financial operations. Furthermore, FinTech innovations have played a crucial role in

expanding financial services to previously underserved populations, particularly in developing economies, thereby contributing to greater financial inclusion. However, the integration of FinTech into traditional banking systems also presents several challenges, including regulatory uncertainties, cybersecurity risks, data privacy concerns, and the need for significant technological investment. Banks must therefore adopt robust risk management strategies and collaborate with FinTech firms to ensure secure and sustainable innovation. Regulatory bodies also play a vital role in establishing frameworks that balance technological advancement with consumer protection and financial stability. Overall, the study highlights that FinTech is not merely a technological trend but a fundamental driver of transformation within the banking sector. By embracing digital innovation and fostering strategic partnerships, banks can enhance competitiveness and create more inclusive, efficient, and resilient financial ecosystems in the digital era.

Keywords: *FinTech, digital banking, financial innovation, mobile banking, blockchain technology, financial inclusion, banking transformation, cybersecurity, digital payments.*

A Conceptual Study on Reimagining Brand Communication in the Age of social media and AI

Ankitha G S¹, Harshith Babu V S²

¹Student, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapur. ankithasrinivas25@gmail.com

²Assistant Professor, Department of MBA, Nagarjuna College of Management Studies,
Chikkaballapur, harsithbabu.vs@gmail.com .

Abstract

The rapid advancement of digital technologies has fundamentally transformed the way organizations communicate with consumers. In particular, the emergence of social media platforms and artificial intelligence (AI) has reshaped traditional brand communication strategies by enabling real-time interaction, personalized messaging, and data-driven engagement. This conceptual study explores how the integration of social media and AI technologies is redefining brand communication in the contemporary marketing

environment. The study examines the evolving role of digital platforms in facilitating interactive relationships between brands and consumers, while also highlighting the increasing importance of intelligent systems in analyzing consumer behavior and delivering targeted communication strategies. Social media platforms such as Facebook, Instagram, and Twitter have created dynamic environments where consumers actively participate in brand conversations, share opinions, and influence brand perceptions. As a result, brand communication has shifted from a one-way promotional approach to a more interactive, collaborative, and customer-centric model. Organizations now focus on building long-term relationships with consumers through engagement, storytelling, and community-driven communication. Artificial Intelligence further enhances this transformation by enabling marketers to analyze large volumes of consumer data, identify behavioral patterns, and deliver personalized content at scale. AI-powered technologies such as chatbots, recommendation systems, predictive analytics, and sentiment analysis help organizations understand consumer preferences and respond to customer needs more effectively. These technologies allow brands to optimize communication strategies, improve customer experience, and strengthen brand loyalty in highly competitive markets. Despite the significant opportunities offered by social media and AI, organizations also face challenges related to data privacy, algorithmic bias, content authenticity, and ethical considerations. Therefore, businesses must adopt responsible and transparent digital communication practices while leveraging technological innovations. Overall, this conceptual study highlights that the integration of social media and AI is reshaping the future of brand communication by enabling more personalized, interactive, and data-driven marketing strategies. Understanding these evolving dynamics is essential for organizations seeking to remain competitive in the digital economy.

A Conceptual Study on Impact of Digital Payment Adoption on the Operational Efficiency and Financial Performance of Small Businesses

Anusha CM¹, Dr Girish Kumar H V²

¹2nd year MBA, anusha.cm.official@gmail.com, Nagarjuna College of Management studies – Chikkaballapura

¹Associate Professor, Department of MBA, , Nagarjuna College of Management studies – Chikkaballapura

Abstract:

The rapid advancement of financial technology (FinTech) has significantly transformed the way businesses conduct financial transactions. Digital payment systems such as mobile wallets, online banking, QR-code payments, and point-of-sale (POS) applications are increasingly adopted by small businesses due to their convenience, efficiency, and security. This conceptual study examines the impact of digital payment adoption on the operational efficiency and financial performance of small businesses. The primary objective of the study is to explore how the integration of digital payment systems influences business operations, transaction speed, customer satisfaction, and revenue generation among small enterprises. The study develops a conceptual understanding of the relationship between digital payment adoption and key business performance indicators such as sales growth, transaction efficiency, cost management, and overall financial performance. The study also highlights factors influencing the adoption of digital payment technologies, including ease of use, accessibility, and perceived security. Existing literature suggests that digital payment systems improve transaction processing speed, enhance record keeping, increase customer convenience, and create greater sales opportunities for small businesses. In addition, digital payments reduce reliance on cash transactions, minimize human errors, and improve financial transparency. However, challenges such as technological barriers, security concerns, and limited digital literacy among some business owners may influence adoption. Overall, the study emphasizes the role of digital payment technologies in improving operational efficiency and financial performance while supporting the growth and sustainability of small businesses in the

digital economy and providing insights for policymakers, financial institutions, and entrepreneurs.

Keywords: *Digital Payments, Small Businesses, Financial Technology, Business Performance, Operational Efficiency, Digital Adoption.*

Impact Of Employee Motivation On Organizational Performance

Bhavya P¹ , Harshith babu V S²

Contact: 9148399958.

²Assistance professor, Department of MBA, Nagarjuna College of Management Studies
Chikkaballapur-562101 Contact: 8825782433.

Abstract

Employee motivation has a significant impact on organizational performance because motivated employees tend to work more efficiently, show greater commitment, and contribute positively to achieving organizational goals. When employees feel valued through recognition, rewards, fair compensation, and supportive leadership, they develop a positive attitude toward their work and are more willing to put extra effort into their tasks. This leads to higher productivity, improved quality of work, and better overall performance of the organization. Motivated employees also experience higher job satisfaction, which reduces absenteeism and employee turnover while improving teamwork and cooperation within the workplace. In addition, motivated employees are more likely to show creativity and innovation by suggesting new ideas that help organizations improve their processes, products, and services. Management practices such as training programs, career development opportunities, and performance-based incentives also play an important role in increasing employee motivation. On the other hand, lack of motivation can negatively affect organizational performance by reducing productivity, creating dissatisfaction among employees, and increasing workplace conflicts. Therefore, organizations must focus on creating a positive and supportive work

environment that encourages motivation among employees. By doing so, organizations can enhance employee engagement, improve work performance, and achieve long-term growth and success in a competitive business environment.

Role of AI in Reshaping Education

Chitra shree C V¹, Nandini A²

¹1st Year, Nagarjuna college of management studies , chitragowda7411@gmail.com

²1st Year, Nagarjuna college of management studies , Nandiiniaamar123@gmail.com

Abstract:

Artificial Intelligence (AI) is rapidly transforming the education sector by redefining teaching methodologies, learning experiences, and institutional management practices. The integration of AI technologies enables personalized, adaptive and data-driven learning environments that cater to diverse learner needs. Through advanced data analytics, AI systems can monitor student performance, identify learning gaps and provide customized content and feedback in real time. Intelligent Tutoring Systems simulate one-on-one guidance, enhancing student engagement and improving academic outcomes. Furthermore, AI-driven automation streamlines administrative functions such as grading, scheduling and performance tracking, allowing educators to focus more on mentoring, creativity, and critical thinking development. AI also promotes inclusivity and accessibility in education by supporting assistive technologies like speech recognition, text-to-speech conversion and real-time translation, thereby addressing the needs of students with disabilities and diverse linguistic backgrounds. The emergence of virtual learning environments powered by AI, along with integration of augmented and virtual reality, creates immersive and interactive educational experiences beyond traditional classroom settings. Additionally, AI supports lifelong learning by recommending skill-based courses aligned with evolving job market demands, ensuring continuous professional development. Despite these advantages, concerns related to data privacy,

ethical governance, algorithmic bias and the digital divide remain significant challenges. Ensuring equitable access to AI technologies and maintaining the human element in teaching are critical for sustainable implementation. Artificial Intelligence is transforming education by enabling personalized learning, adaptive assessments and intelligent tutoring systems. It enhances teaching efficiency, supports data-driven decision making and improves student engagement. AI-powered tools also facilitate remote learning, automate administrative tasks, and promote inclusive education, thereby reshaping traditional teaching methods and learning experiences. Overall, AI is reshaping education into a more personalized, efficient and inclusive system, and fostering improved learning outcomes while complementing, rather than replacing the role of educators.

Evaluating the Impact of Employee Training on Organizational Performance Through Observational Analysis

Chandan Gowda K.S¹ , Punitha M² , Dr Nagaraju R³

¹ 1st YEAR MBA, chandangowdaks80@gmail.com , 6363002538, Nagarjuna College of Management Studies

² 1st YEAR MBA, mpunitha275@gmail.com, 8217893894 , Nagarjuna College of Management Studies

³ Assoc. Prof. Department of MBA, Nagarjuna College of Management studies

Abstract: A fresh look at worker growth shows learning boosts how teams operate. Firms spend on lessons so people gain sharper abilities, deeper understanding, stronger results. What happens next gets studied by watching real shifts in daily actions. After sessions, those watching noted differences - speed picked up, tasks flowed better, focus tightened. Looking closely at workers across various teams, the research watched how they acted prior to training and afterward. Instead of just numbers, it focused on real behavior - finishing tasks, talking with others, working together, solving issues.

Following sessions, people handled duties more smoothly, spoke more clearly, teamed up easier. Confidence grew alongside skill levels, which seemed to help them face daily hurdles without slowing down. When learning was regular and thoughtfully arranged, outcomes shifted noticeably over time. Such efforts didn't just affect individuals but echoed through overall team function.

Structural and Behavioral Impact of Goods and Services Tax (GST) on Small Business in India

Channakeshava Reddy G S, Dr. Nagaraju R

¹1st YEAR MBA, Channakeshavareddygs@gmail.com, 7411678084 , Nagarjuna
College of Management Studies

²Assoc. Prof. Department of MBA, Nagarjuna College of Management studies

Abstract:

The introduction of the Goods and Services Tax (GST) in India in July 2017 marked one of the most significant indirect tax reforms in the country's economic history. GST replaced a complex system of multiple indirect taxes such as Value Added Tax (VAT), Service Tax, Excise Duty, and Entry Tax with a unified tax structure. While GST has been widely discussed in terms of revenue generation, tax efficiency, and economic growth, its structural and behavioral impact on small businesses has gained increasing academic interest.

This research study examines how GST has influenced the operational structure, compliance behavior, and business practices of small enterprises in India. Small businesses form the backbone of the Indian economy and contribute significantly to employment generation, local trade, and entrepreneurship. The implementation of GST

required these enterprises to adopt new systems of tax compliance, digital reporting, and formal documentation, which brought both opportunities and challenges.

The study adopts a descriptive and analytical research approach using conceptual analysis, review of existing studies, and evaluation of pre-GST and post-GST business practices. The research identifies major changes in accounting discipline, transparency, supply chain relationships, digital adoption, and financial credibility among small businesses.

The findings indicate that GST has encouraged formalization and improved financial documentation among small enterprises. However, compliance complexity and digital literacy gaps still exist. The study concludes that GST should be viewed not merely as a tax reform but as a structural transformation that is gradually reshaping business behavior and operational culture in India's small business sector.

Keywords: *GST, Small Businesses, Tax Reform, Compliance Behavior, Digital Adoption, Business Formalization*

A Conceptual Study on Role of AI Chatbots in Enhancing Customer Experience in Marketing

Charan Yadav C¹

¹ 2nd year MBA, Nagarjuna College of Management studies – Chikkaballapura,

E- mail id: - mrcharancyc@gmail.com, Contact no: - +91 6364404699

Abstract

This conceptual research paper examines the growing importance of Artificial Intelligence (AI) powered chatbots in enhancing customer experience within the modern marketing environment. With the rapid expansion of digital technologies and increasing online consumer interactions, organizations are adopting intelligent systems to improve communication and service efficiency. AI chatbots enable businesses to interact with customers instantly and provide personalized responses across various digital platforms. Using technologies such as Natural Language Processing (NLP), machine learning, and

data analytics, chatbots can understand customer queries and deliver relevant responses in real time. Unlike traditional customer service systems that rely on human agents and limited working hours, AI chatbots provide continuous twenty-four-hour assistance, reducing response time and increasing convenience for users. In marketing, chatbots function not only as service tools but also as engagement platforms that strengthen customer relationships. They support customers throughout different stages of the buying process, including product inquiries, purchase decisions, complaint resolution, and feedback collection. The conversational data generated through these interactions helps organizations understand customer preferences and behavioural patterns, enabling businesses to design personalized marketing strategies and targeted promotions. This study highlights key factors influencing customer experience such as responsiveness, accessibility, personalization, interactivity, and customer satisfaction. Effective chatbot implementation can improve customer engagement, strengthen brand perception, and encourage long-term loyalty. However, challenges such as limited emotional intelligence, algorithmic inaccuracies, and concerns related to data privacy and security remain important issues that must be addressed to maintain customer trust and ensure responsible use of AI technologies in marketing.

Keywords: *Artificial Intelligence, AI Chatbots, Customer Experience, Digital Marketing, Customer Engagement, Personalization.*

Blockchain and Cryptocurrencies: Transforming the Future of Digital Economy

Darshan H V¹, Mr. Rakshith Gowda K M²,

¹Student, Department of MBA, Nagarjuna College of Management Studies.

darshanhv500@gmail.com

²Assistant Professor, Department of MBA, Nagarjuna College of Management studies,

Chikkaballapur, rakshithgodwa151@gmail.com

Abstract:

The rapid evolution of digital technologies has significantly transformed the global economic landscape, with blockchain and cryptocurrencies emerging as two of the most disruptive innovations in the digital economy. Blockchain technology, a decentralized and distributed ledger system, enables secure, transparent, and immutable recording of transactions without the need for intermediaries. This technological advancement has reshaped traditional financial systems by improving efficiency, reducing transaction costs, and enhancing trust among participants. Cryptocurrencies, built on blockchain infrastructure, have introduced a new form of digital assets that facilitate peer-to-peer transactions across borders with minimal regulatory and operational barriers. The integration of blockchain and cryptocurrencies is driving innovation across multiple sectors including finance, supply chain management, healthcare, governance, and digital identity systems. In the financial sector, blockchain-based solutions enable faster settlement processes, improved risk management, and enhanced transparency in financial operations. Cryptocurrencies are also redefining payment systems by enabling decentralized finance (DeFi), which provides financial services such as lending, borrowing, and trading without traditional banking institutions. Moreover, smart contracts—self-executing contracts embedded in blockchain—are automating complex transactions and reducing reliance on third-party verification. Despite these transformative benefits, several challenges remain, including regulatory uncertainty, scalability issues, security concerns, and market volatility associated with cryptocurrencies. Governments and regulatory bodies worldwide are working toward establishing frameworks to ensure financial stability while promoting technological innovation. As digital economies continue to expand, the adoption of blockchain technology and cryptocurrencies is expected to play a pivotal role in shaping the future of financial systems, enabling more inclusive, transparent, and efficient economic activities. This study highlights the transformative potential of blockchain and cryptocurrencies in redefining digital economic structures and emphasizes the need for balanced regulatory approaches, technological advancement, and strategic adoption to maximize their benefits while mitigating associated risks.

“Talent management and succession planning.”

Darshini Gowda.B¹

¹Student, 1st Year MBA, Nagarjuna college of Management Studies. Email ID:
darshinigowda2004@gmail.com

Abstract:

In the modern, volatile business landscape, **Talent Management** and **Succession Planning** have transitioned from elective HR functions to critical strategic imperatives that ensure long-term organizational continuity. Talent management serves as the overarching framework for attracting, developing, and retaining high-potential employees, shifting the focus from mere recruitment to a holistic "lifecycle" approach that optimizes performance. This ecosystem provides the necessary foundation for succession planning, which is the targeted process of identifying and grooming internal candidates to fill pivotal leadership and technical roles. By aligning individual career trajectories with the organization's long-term roadmap, these practices mitigate the risks associated with "brain drain" and sudden vacancies in the C-suite. A successful integration of both strategies relies on data-driven assessments to distinguish between current performance and future potential, coupled with structured mentorship to facilitate the transfer of institutional knowledge. Ultimately, treating leadership development as a proactive journey rather than a reactive emergency allows an organization to build a deep, versatile "bench" of talent, ensuring that transitions are seamless and that the company remains resilient amidst shifting market demands.

Impact of Social Media on Modern Society

Keerthana H M¹, N M Indu², Anjali A³,³Latha K S⁴

^{1,2,3}B.com Final Year, Nagarjuna College of Management Studies, Chikkaballapura

⁴Assistant professor, Department of Commerce and Management, Nagarjuna College of Management Studies, Chikkaballapura

Abstract:

Social media has become an essential part of modern life, significantly influencing communication, behaviour, and society as a whole. It enables instant global connectivity, allowing individuals to share information, express ideas, build relationships, and promote businesses or careers, thereby supporting education, digital marketing, entrepreneurship, and overall economic development. It also plays an important role in raising social awareness, encouraging civic participation, and giving a voice to diverse and marginalized communities. However, the rapid spread of information on these platforms increases the risk of misinformation, fake news, and online manipulation, which can mislead people and disrupt social harmony. Excessive use of social media can lead to addiction, reduced productivity, and mental health issues such as stress, anxiety, depression, and low self-esteem, particularly among young users. Additionally, concerns related to privacy, cyberbullying, and data security have grown, as users often share personal information without adequate protection or awareness. While social media promotes cultural exchange and global interaction, it may also weaken real-life relationships by reducing face-to-face communication and emotional connections. Therefore, although social media offers numerous advantages, it is essential to use it responsibly and maintain a balance to minimize its negative effects and ensure a positive impact on individuals and society.

Key words: *Social media, Communication, Global connectivity, Mental health.*

Sustainable Experiential Marketing through Traditional Crafts: Reimagining Government Retail Spaces for Enhanced Brand Engagement – A Case Study of Co-optex Showrooms

Ar. Rabiyaatul Basriya.K.M¹

¹St.Francis College, Koramangala, Bangalore-34, 9884381155,
rabiyaabasriya257@gmail.com

Abstract The contemporary retail landscape has undergone a tectonic shift, moving away from mere transactional exchanges toward immersive, experiential platforms where consumers seek emotional and sensory resonance. However, many public-sector retail outlets in India—specifically state-run handloom cooperatives—remain trapped in outdated "servicescapes" that fail to articulate their inherent brand value. This study

investigates the strategic integration of Tamil Nadu's regional crafts—ranging from Erode Jamakkalam carpets and Thanjavur paintings to the intricate Kanjivaram and Sungudi textiles—into store interiors as a form of sustainable experiential marketing. Adopting a conceptual, exploratory approach that weaves together field observations and secondary data, the paper applies environmental psychology (the S–O–R model) and Kotler's theory of atmospherics. We argue that a "Craft-Chic" retail environment does more than just sell a product; it elevates brand positioning and fosters deep-seated loyalty among younger, eco-conscious demographics. The analysis culminates in a strategic framework designed to harmonize modern commercial objectives with the preservation of cultural heritage and inclusive development.

Keywords: *Experiential Marketing; Servicescape; Brand Identity; Sustainable Retail; Co-optex; Tamil Nadu Heritage.*

Factors Influencing Stock Market Perceptions Among Young Investors

Ashwini K.¹, Bhagyalakshmi K².

^{[1],[2]} Department of Management Studies, Visvesvaraya Technological University,
Centre for Postgraduate Studies, Mysuru, Karnataka, India – 570029.

¹ashwinik1931@gmail.com, ² bhagyaqua@gmail.com

Abstract

This study examines the determinants shaping stock market perception among young investors in India. A survey of 156 respondents, predominantly aged 20–30 and comprising students and working professionals, was conducted to understand their investment behavior and decision-making influences. Although more than 90% of participants actively invest in equities, most prefer to begin with modest investment amounts, reflecting limited income levels and relatively low market experience. Demographic factors particularly age, education, occupation, and income emerged as significant influences on how young individuals perceive and approach stock market participation. While awareness of investment opportunities is increasing, risk-taking remains measured and strategic. Technology plays a pivotal role in fostering confidence among young investors. The availability of user-friendly trading applications, real-time

updates, and accessible online platforms has reduced entry barriers and encouraged broader participation. However, challenges such as inadequate financial literacy, connectivity issues, and concerns about security continue to constrain engagement. Investment decisions are also shaped by expert recommendations, corporate performance, social media exposure, and regulatory frameworks. Many respondents demonstrate a willingness to assume higher risk in pursuit of superior returns, yet they prefer diversification as a risk-management strategy. Trust remains central, with strong preference for established brokers and credible platforms. The findings underscore the need for targeted financial education initiatives, simplified digital investment tools, and transparent regulatory practices. Strengthening financial literacy and institutional trust can enhance informed participation and contribute to the long-term stability and inclusiveness of India's capital markets.

Keywords: *Young investors; Stock market perception; Financial literacy; Investment behavior; Technology adoption.*

Attention-Driven Metrics and Their Role in Enhancing Advertising Effectiveness: A Study of Gen Z Digital Engagement pattern in India

Triveni N¹, Dr. Kavitha C²

[1] [2] Assistant professor, Nagarjuna College of Management Studies, Chikkaballapura.

trivenin6684@gmail.com +91 8296499932

Abstract:

In the contemporary digital advertising landscape, the effectiveness of marketing communication is increasingly determined by the ability to capture and sustain consumer attention rather than merely generate exposure. This study examines the role of attention-driven metrics in enhancing advertising effectiveness, focusing on the digital engagement patterns of Generation Z in India. As a digitally native cohort characterized by high media multitasking and selective content consumption, Gen Z challenges the relevance of traditional metrics such as impressions and click-through rates. Accordingly, the study emphasizes advanced attention-based indicators including active attention time, viewability duration, scroll depth, interaction intensity, and cognitive engagement as more robust predictors of advertising outcomes. Drawing on recent secondary data from industry reports, platform analytics, and scholarly sources (2023–2025), the findings

indicate that advertisements designed around attention-centric principles such as personalization, immersive storytelling, and short-form video formats consistently yield higher brand recall, deeper engagement, and stronger purchase intention. The growing adoption of AI-enabled analytics and real-time attention tracking further enhances the precision of campaign measurement and optimization. Moreover, platforms prioritizing interactive and snackable content formats play a pivotal role in shaping Gen Z engagement in India. The study concludes that attention-driven metrics provide a more comprehensive and actionable framework for evaluating advertising effectiveness by prioritizing engagement quality over quantitative reach. It offers strategic implications for marketers to realign digital advertising approaches with evolving consumer behaviour, thereby achieving sustainable impact and improved return on investment in India's dynamic digital ecosystem.

Intelligent Learning Systems for Sustainable, Inclusive, and Responsible Growth

Dr. Kiran Kumar T N

Associate Professor, Nagarjuna College of Management Studies

Email: dr.kirankumar.tn@gmail.com

Abstract

Artificial Intelligence (AI) is increasingly recognized as a transformative force in education, reshaping how knowledge is delivered, consumed, and applied. One emerging approach in this space is AI-driven learning, which integrates technology with engaging instructional strategies to improve learner participation and understanding. While earlier approaches relied on multimedia and basic digital tools, the integration of AI has significantly expanded possibilities by enabling more adaptive, personalized, and immersive learning experiences.

This paper explores the role of AI-driven learning by highlighting how adaptive platforms, gamified systems, and immersive tools such as Virtual Reality (VR) and Augmented Reality (AR) are influencing education. AI supports adaptive learning by adjusting pace, content, and difficulty based on individual learner needs, ensuring a more

inclusive learning environment. Gamification enhances motivation and retention by incorporating interactive elements such as challenges and rewards, while immersive technologies create opportunities for experiential learning. Together, these elements contribute to a learning system that is more flexible, engaging, and responsive.

The relevance of AI-driven learning has increased in the post-COVID-19 context, particularly in India, where large-scale disruptions exposed gaps in access, engagement, and quality. AI-enabled platforms have helped address these challenges by supporting self-paced learning, reducing monotony, and improving accessibility across diverse learner groups. At the same time, the use of AI raises important considerations related to data privacy, ethical use, and equitable access, highlighting the need for responsible implementation.

Overall, AI-driven learning supports the development of skills such as creativity, problem-solving, and adaptability, which are essential in today's dynamic environment. The paper presents AI-driven learning as a practical and evolving approach that contributes to more inclusive, responsible, and sustainable educational development.

Hyper-Personalised Strategies in Modern Marketing

Mr. V Dhanush Gowda¹

Student from Nagarjuna College of Management Studies, Chikkaballapur – 562101

Mrs. Ambika V M²

Assistant Professor, Department of Commerce and Management, Nagarjuna College of Management Studies, Chikkaballapur – 562101, India, ambikapragati@gmail.com Ph No.: 9620080138

Abstract:

In the evolving landscape of digital marketing, hyper-personalized strategies have emerged as a powerful approach for enhancing customer engagement and satisfaction. Hyper-personalization involves using advanced technologies such as artificial intelligence, big data analytics and machine learning to deliver highly tailored experiences based on individual

consumer preferences, behaviours and interactions. Businesses are increasingly adopting these strategies to build stronger relationships with customers and improve brand loyalty. The emergence of the metaverse has further expanded the scope of hyper-personalization by creating immersive virtual environments where brands can interact with consumers in real time. Within the metaverse, companies can design customized virtual experiences, products and services that reflect individual user identities and preferences. This integration allows businesses to collect deeper behavioural insights and provide unique, interactive marketing experiences. As digital ecosystems continue to evolve, the combination of hyper-personalization and metaverse technologies is expected to redefine consumer engagement, creating more meaningful, data-driven and immersive marketing strategies for the future. Moreover, hyper-personalization in the metaverse goes beyond simple product recommendations. It enables brands to create virtual showrooms, interactive brand events and personalized avatars that mirror consumer lifestyles and aspirations. Customers are no longer passive viewers but active participants in a digital experience shaped around their interests. This level of engagement strengthens emotional connections and increases brand recall. However, the growing use of consumer data also raises concerns about privacy, data security and ethical marketing practices. Therefore, companies must strike a balance between personalization and responsible data usage. When implemented thoughtfully, hyper-personalized strategies within the metaverse can transform traditional marketing into a more interactive, relationship-driven model that prioritizes customer experience and long-term value creation.

A Study on CRM and Relationship with Customer Satisfaction Towards Reliance Digital .

RAMYA M G¹, Dr. Nagaraju R²

¹mgramya992@gmail.com, 8105932326, 1 st YEAR MBA

Nagarjuna College of management studies

²Assoc.prof. & Head-Dept. of MBA

Abstract:

Customer Relationship Management (CRM) plays a significant role in building strong

relationships between organizations and their customers, which ultimately leads to higher customer satisfaction. In the competitive retail electronics market, companies must adopt effective CRM strategies to understand customer needs and provide better services. This study focuses on analyzing the relationship between Customer Relationship Management and customer satisfaction with special reference to Reliance Digital. The main objective of the study is to examine how CRM practices such as customer service, communication, after-sales support, complaint handling, and personalized services influence customer satisfaction. The study is based on both primary and secondary data. Primary data was collected from customers through questionnaires, while secondary data was gathered from journals, books, company websites, and other related sources. The collected data was analyzed to understand customers' perceptions about the services provided by Reliance Digital and their level of satisfaction. The results of the study indicate that effective CRM practices have a positive impact on customer satisfaction. Customers expect quick responses, quality service, and proper support from the company. Reliance Digital focuses on maintaining good relationships with customers through effective service systems and support, which helps in building customer trust and loyalty. The study concludes that strong CRM practices are essential for improving customer satisfaction and maintaining long-term relationships with customers. Therefore, companies like Reliance Digital should continuously improve their CRM strategies to meet customer expectations and remain competitive in the retail electronics market.

meghavtu2824@gmail.com

Abstract:

This study investigates the integration of artificial intelligence (AI) with circular economy models to enhance sustainable livelihoods for rural women micro-entrepreneurs. Utilizing bibliometric analysis of publications from 2006 to 2025, the research identifies trends, thematic evolution, and knowledge structures within this emerging domain. Findings reveal that AI-driven circular economy practices significantly improve resource efficiency, market access, and decision-making, contributing to income stability and environmental sustainability. Tools such as predictive analytics, automation, and decision-support systems facilitate waste reduction, resource reuse, and local value creation. Adoption is influenced by socio-economic, technological, and institutional factors, with challenges including limited digital literacy, inadequate infrastructure, and weak institutional support. Bibliometric and thematic analyses indicate a multidisciplinary research landscape, highlighting motor themes like big data and energy efficiency, alongside niche areas such as sustainability, agriculture, and renewable energy. The study emphasizes managerial, societal, and research implications, recommending targeted capacity-building programs, affordable AI solutions, and supportive policies. Future research should explore longitudinal impacts, regional comparisons, and strategies to overcome adoption barriers.

Abstract:

Industry 4.0, an initiative from Germany, has become a globally adopted term in the past decade. Many countries have introduced similar strategic initiatives, and a considerable research effort has been spent on developing and implementing some of the Industry 4.0 technologies. At the ten-year mark of the introduction of Industry 4.0, the European Commission announced Industry 5.0. Industry 4.0 is considered to be technology-driven, whereas Industry 5.0 is value-driven. The co-existence of two Industrial Revolutions invites questions and hence demands discussions and clarifications. We have elected to use five of these questions to structure our arguments and tried to be unbiased for the selection of the sources of information and for the discussions around the key issues. It is our intention that this article will spark and encourage continued debate and discussion around these topics.

Keywords: *Industry 4.0, Industry 5.0, Industrial Revolution, Digital Transformation, Human-Centric Innovation, Smart Manufacturing, Sustainable Industry, Emerging Technologies, Future of Manufacturing.*

“Blockchain-Enabled Ethical Data Governance Framework for Secure and Privacy-Preserving Business Analytics”

Bhavana M N¹ Ganavi S H²

NCMS, ammubhavana361@gmail.com

NCMS, ganavi.sh05@gmail.com

ABSTRACT:

The rapid advancement in business analytics and artificial intelligence has apparently transformed the way organizations analyses and usage of large amount of data. With many companies turning to data analysis to emerge new ideas and operational efficiencies, data governance and privacy issues have become a significant area to concentrate. By utilizing these technologies, companies are able to generate valuable insights that support better

decision-making and strategic planning. As, the growth dependence on big data analytics has also raised emergent concerns related to privacy of data, ethical decision-making and compliance. Traditionally centralized data governance systems often lack sufficient transparency, accountability, and security which increase the misuse of data and unauthorised access which is abiding security law. To overcome these challenges, this research proposes a Blockchain-Enabled Ethical Data Governance Framework that incorporates emerging technologies such as blockchain, smart contract features, federated learning and secured privacy. The proposed framework aims to provide a more secured and transparent environment platform for managing and data analyzation while ensuring protection of sensitive, private information. By proposing these technologies, organizations can strengthen data security along with improve governance processes and support compliance with global data protection rules with proper regulations. Ultimately, the framework highlights how advanced technological solutions can help organizations balance innovation in business analytics with ethical responsibility and data protection. Herein, an effort is made to highlight the role of data governance in ensuring regulatory compliance with legislation such as the GDPR or CCPA while tackling the moral controversies of the socially responsible use of artificial intelligence in business analytics. Therefore, U.S. companies can operate within the regulatory frameworks, enhance consumer confidence, and fully exploit the intelligence potential of the data without ethical misconduct by enhancing data quality, transparency, and accountability.

Impact of social media advertising and customer value on online purchase intention:

An Empirical study in Bangalore

Harshith Babu V S¹

Assistant Professor – MBA, Nagarjuna College of Management Studies, Chikkaballapura

Abstract:

The rapid growth of digital technology and internet penetration has significantly transformed consumer buying behaviour, particularly in the electronics market. Social media platforms

have emerged as powerful tools that influence consumers' perceptions, awareness, and purchase decisions. This study examines the **impact of social media advertising and customer value on online purchase intention of electronic products in Bangalore City**. The research focuses on how social media interactions, online reviews, influencer recommendations, and promotional content affect consumers' attitudes toward purchasing electronic products online. In addition, the study analyses the role of perceived customer value, including functional value, economic value, and emotional value, in shaping consumers' purchase intentions. The study concludes that businesses and electronic product retailers should strategically utilize social media advertising and focus on enhancing customer value to improve online purchase intention. The findings reveal that there is no relationship between social media advertising, customer value, and online purchase intention of customers. It also provides useful insights for marketers to develop effective digital marketing strategies that enhance customer engagement and drive online sales in the competitive electronics market.

¹St. Francis de Sales College (Autonomous), Electronic City, Bengaluru, Karnataka

²St. Francis de Sales College (Autonomous), Electronic City, Bengaluru, Karnataka

³Associate Professor, School of Commerce, St. Francis de Sales College (Autonomous),
Electronic City, Bengaluru, Karnataka

ABSTRACT:

This study investigates the impact of sustainability and Corporate Social Responsibility (CSR) practices on consumer perception in the Fast-Moving Consumer Goods (FMCG) sector. With growing environmental awareness and socially conscious consumption patterns, FMCG brands face increasing pressure to align their practices with consumer values. The research examines three independent variables — environmental sustainability practices, CSR communication transparency, and eco-friendly packaging — and their effects on

consumer trust, purchase intention, and brand loyalty. Using a structured Likert-scale questionnaire administered to respondents across urban, semi-urban, and rural locations in India, quantitative analysis reveals that sustainability practices significantly influence consumer trust, CSR transparency moderately affects purchase intention, and eco-friendly packaging emerges as the strongest driver of brand loyalty.

THE ROLE OF FINANCIAL LITERACY IN THE ADOPTION OF FINTECH SERVICES IN RURAL AREAS WITH SPECIAL REFERENCE TO GRADUATES

Ranjitha N¹ , Veda N² , Mr Kumar N³

¹ St. Francis de Sales College (Autonomous), Electronic City, Bengaluru, Karnataka, India

² St. Francis de Sales College (Autonomous), Electronic City, Bengaluru, Karnataka, India

³ Assistant Professor, School of Commerce, St. Francis de Sales College (Autonomous),

Electronic City, Bengaluru, Karnataka

ABSTRACT:

Financial Technology (FinTech) services have rapidly transformed the global financial landscape. While urban centres have seen strong FinTech growth, rural graduates in India remain a less-studied yet strategically important demographic. This study investigates the role of financial literacy—operationalised through Financial Knowledge, Risk and Security Awareness, and Digital Literacy—in shaping the FinTech adoption behaviour of rural graduates. Using a structured questionnaire, the study examines three outcome variables: Intention to Use FinTech Services, Trust in FinTech Services, and Continuance Usage Behaviour. Reliability was confirmed across all constructs, and hypotheses were tested through Pearson correlation and simple linear regression. Results indicate that all three dimensions of financial literacy significantly influence their respective outcome variables, with Digital Literacy emerging as the strongest predictor of sustained usage behaviour. The findings offer actionable implications for policymakers, financial institutions, and FinTech developers seeking to promote inclusive financial services in rural India.

AN ANALYSIS OF RECENT ADVANCEMENTS IN INDIAN MICRO FINANCE

Ahamadi Khanum¹

Student, Department of MBA, Nagarjuna College of engineering and technology,

Bangalore India, Email: ahamaikhanum98@gmail.com

Abstract

In India, microfinance has become a crucial instrument for financial inclusion, giving the underprivileged, especially those living in rural regions, access to credit, savings, and insurance services. This abstract explores current trends, obstacles, and governmental interventions in the Indian microfinance industry. There has been massive growth and transformation in India's microfinance industry in the last few years. One significant change is the increasing role of Self-Help Groups (SHGs) in microfinance SHGs, which are made up of women from low-income families, have developed into efficient avenues for microloan distribution and community-based financial empowerment. NRLM and similar government initiatives have been very beneficial to microfinance enterprises that are based on SHGs. . The growth of non-banking financial corporation microfinance institutions (NBFC-MFIs) is another significant change. These specialist organizations have broadened their scope and range of products to meet the various financial requirements of low-income families. In the microfinance industry, digitalization has become a disruptive factor that has improved outreach and operational efficiency. Microfinance organizations can now reach rural places and provide better customer service thanks to technology like mobile banking, digital payments, and biometric verification. Despite these developments, there are still issues facing India's microfinance industry, such as a lack of financial literacy, susceptibility to outside shocks, and the need for a variety of financing sources. In addition, banks are looking at digital innovations and risk mitigation strategies since the COVID-19 epidemic has shown how important it is to be resilient and adaptable in microfinance operations. A comprehensive overview of recent events and challenges confronting India's microfinance sector is provided in this abstract, highlighting the significance of sustainable practices and

teamwork in achieving financial inclusion's full potential.

ABSTRACT:

Social media has become an important part of students’ daily life. Platforms such as

Instagram, Facebook, YouTube, and WhatsApp influence students' opinions, preferences, and buying decisions. Students often see advertisements, product reviews, influencer promotions, and brand information on social media, which can affect their interest in different products and services. The purpose of this study is to understand how social media influences the buying behavior of students. The factors such as online advertisements, influencer marketing, product reviews, and peer recommendations. Social media helps students to compare products, learn about new brands, and make quick purchase decisions. This study is mainly based on primary and secondary data. Primary data is collected through questionnaires and surveys among selected students. The research aims to identify the level of social media influence on students' purchasing behavior and to understand the factors that motivate them to buy products online. The findings of the study will help in understanding the role of social media in shaping students' buying behavior.

ABSTRACT

Artificial intelligence transforms businesses from being reactive to proactive, allowing them to scale efficiently and compete effectively in dynamic markets. AI in business growth refers to leveraging technologies like machine learning, natural language processing, data analytics to automate processes, enhance decision-making, and uncover actionable insights from large

datasets. It drives growth by optimizing operations, boosting productivity, reducing costs and personalizing customer experiences.

In 2026, the digital marketing landscape has moved past the era of mass-produced. This study explores the critical shift towards artificial intelligence (AI) in digital marketing through social media and mobile networks and its role in providing a framework for businesses to achieve sustainable growth. AI reshapes digital marketing and its impact on sustainability is becoming incredible. These dynamic highlights the necessity of exploring how AI can be utilised for sustainable marketing practices.

The reason behind this investigation is to examine the value of AI measured in various ways, best internal business strategies and growth focused presentations to convert scrollers into loyal customers. It also evaluates the performance of “raw” user generated content and employee advocacy against traditional high-production advertising. This paper contributes the area of sustainable marketing, technology and brand literature focusing on AI as non-human actor. Today entrepreneurs are spending more investment to acquire huge market area, so AI marketing technology and tools are necessary for sustainable development. To grow companies must stop chasing algorithms and start building “brand Moats” through unique, irreproducible human connections. So, we must know more information about digital synthesis for sustainable success and how it helps to future also in an organisation, the study shows that entrepreneurs of Tumakuru district of Karnataka are aware of AI marketing.
