FOREWORD

To the Reader,

It is a great honour that I write the foreword to the proceedings of the National Conference, **“Rediscovering Business Practices Post-COVID-19,”** held on January 21, 2023. The conference was organised by Department of Commerce and Management in association with IQAC, Nagarjuna College of Management Studies, Chikkaballapur.

This conference served as a platform for scholarly collaboration, bringing the best minds together for intellectual exchange of ideas and information regarding research, the improvement of teaching and learning.

The keynote address was given by Mr. Ramesh K V, Managing Director, Client Experiences & Industry Solutions Lead Enterprise and Industry Technologies, Advanced Technology Centers in India, the Eminent Speakers of various Universities spoke about themes. The best research articles were selected to be included in this conference proceedings.

I congratulate the Organising committee, reviewers, paper presenters and all the participants who made this conference very successful. I hope the conference would motivate all the participants and research scholars to make the best use of it.

-Prof. Manohar Narajji
Director NES

PREFACE

The National Conference On “**Rediscovering Business Practices Post-COVID-19**”, was held on January 21, 2023, The conference was organised by the Department of Commerce and Management in association with IQAC, Nagarjuna College of Management Studies, Chikkaballapur. This conference brings together innovative academicians and industrial experts in the field of Commerce and Management. The primary goal of the conference is to promote research and developmental activities in the Global Economy of Post-Covid-19. It also provides platform to exchange ideas between academician, researchers, industrialists, students, and practitioners.

The conference covers various sub-themes, including

- Accounting and Finance.
- Human Resource Management.
- Entrepreneurship, Innovation and Technology.
- Marketing.
- Economics.

We have received a good number of abstracts from various parts of country. The abstracts were sent to review committee and selected abstracts are included in the conference proceedings.

I would like to thank everyone who helped directly and indirectly to make the conference successful. Special note of thanks to management, review committee for their invaluable support.

-Dr. Anandamma N
Principal, NCMS

Abstract

Creativity and innovation are two of the most important aspects of entrepreneurship. They are the driving forces behind successful businesses and can be used to create new products, services and solutions to various problems. It helps them to think outside the box and come up with innovative solutions to their problems. Creative thinking also helps entrepreneurs to identify the various opportunities that they may not have noticed before. This can help them to create products or services that are unique and that can provide value to the customers. Innovation is also important for entrepreneurs; it allows them to take creative ideas and turn them into reality. Innovation involves taking

risks, testing out new ideas, and making adjustments as needed, etc. This process can help all the entrepreneurs to develop products or services that are more efficient and cost-effective than existing ones. It also helps them to stay ahead of the competition by creating products or services that customers want. Creativity and innovation are essential for entrepreneurs, because it allows them to come up with new ideas and solutions that can help them to succeed. This is a Conceptual study carried out by using various Secondary sources and this study covers the Bengaluru Rural District all the types of Entrepreneurs. The study also provides advanced and statistically reliable measures of creative individuality, entrepreneurial openness and entrepreneurial creativity. An entrepreneur's openness and creativity can be decisive for their contraption. In some countries, entrepreneurial innovation can be a key factor in biz inflation.

Abstract

The role of working women has changed throughout the world due to Covid-19. This has resulted in a scenario in which working women have tremendous pressure to develop a career as robust as their male counterparts while sustaining active engagement in personal life. The ever-increasing work pressure is taking a toll on working women leaving them less time for themselves. Work-life balance is a state of equilibrium in which the demand of both professional and personal life is equal. A balance life for women is one where they spread their energy and effort between key areas of importance. The main challenges in professional life were found to be extended / odd working hours, travel time between home and workplace and participation in additional jobs and assignment. In personal life, the main

stresses were guilty of not being able to take care of self, children and elders at home. Most women would prefer flexible timing, and supportive spouse, family and friends as well as an environment conducive for work at the office. This research study aims to figure out the comparison of work life balance among the married woman in public sector banks and private sector banks. The research attempts to study their perception of the policies women employees and their perception about the policies and initiatives of banks and their effects on their personal life.

Keywords: Work life balance, Time management, Post covid-19, Married women, Employees.

PROBLEMS AND CHALLENGES OF E-BUSINESS TRENDS IN INDIA

RAMYA P,

Asst. Professor, Department of Commerce,
BBMP First Grade College For Women,
Bengaluru,
p.ramyajagadish@gmail.com, 9035887450.

Abstract

E-Business helps people to shop online, 24/7 irrespective of their place. The digital revolution that we are experiencing now, is the result of a pandemic and because of this E-Business has become more popular. This research paper tries to throw light on the current position of E- Business in India, predict the future of E-Business and analyze the challenges faced by E-Business players in India. Most of the data used in this research paper is from the secondary sources. The pandemic has not only an impact on the public but also on the entrepreneurs too. In reality, covid situations helped the entrepreneurs to use digital platforms in all the possible ways and it helped them to find innovative ways of business which was not imagined in the pre-covid situations. Still there is covid effect on different economies of the world. In one or the other way India is also experiencing its effects. Apart from these, there are many experiments going on in this E-Business field, which in turn gives rise to new trends. Now the challenge is people are exposed to the new problems like Cyber and Data Security, Internet issues at the same speed of the rising new trends. So, this

started a new Era of E-Business which is going to take new transformations in the upcoming days. To get armed for these transformations India needs to go a long way through strong technology and infrastructure and also through achieving 100% digital literacy.

Abstract

Woman plays many roles in the society. She manages her personal and professional life in an effective manner. We could see woman's achievement in various fields like medical, science and technology, entertainment industry, army, and also as an entrepreneur. In recent years the number of women entrepreneurs in India has been increased in a significant manner. According to a report by NASSCOM, the percentage of women led start-ups in India has increased from 8 percent in 2014 to 13 percent in 2019. (Deccan Herald, Nov 21, 2022). Tourism is one of the prominent services sectors in India. Woman is playing a vital role in this sector. This study is about a woman entrepreneur Mrs. Prema Bhat who started BHAT TRAVEL AND TOURS a tourism company in the year 2019. The objectives of this study is to know about Tourism business before the pandemic in India, the challenges, struggles faced by this sector during COVID-19 and the business opportunities

found in Tourism sector post COVID-19 with reference to BHAT TRAVEL AND TOURS, Bengaluru, and Karnataka and to inspire women to be self-employed and to take the challenging situations as opportunities and thereby contributing for the development of Country. This research includes both primary and secondary data. Primary data is collected using Questionnaire method and secondary data is collected from various journals, articles, research papers etc. From this study we found that Tourism is one of the major sectors which suffered from COVID-19, at the same time this sector is having more scope to get opportunities in post COVID-19 thereby re-establishing their business in Tourism Industry. This study attempts to know how a woman entrepreneur faces the challenges and rediscover the business opportunities in Tourism business.

Abstract

Entrepreneurship is now a popular trend in India and this plays a very important role in the economic development of undeveloped countries. As a woman or a group of women who have taken initiative, organize and operate business enterprises. A woman entrepreneur is a confident, creative and innovative woman, desiring economic independence individually and simultaneously creating employment. The main objective of this study is to analyze the problems faced by women as an entrepreneur in the society and from family, and Promotion of women entrepreneurship in the country by empowering them through financial activities and mentoring them to create employment opportunities in the society for development of the economy. This study is mainly based on secondary sources, the secondary data can be compiled from journals and articles. The main scope of this study is the government offers a variety of

programmers and schemes for Women entrepreneurship for economic development even though the government organizes various associations for women, but they are not ready to undertake the business. Finally, conclude that compared to men, women are less motivated to start business due to balance of personal and professional life and lack of motivation from family members and feeling of insecurity in the society.

Abstract

Entrepreneurship is a process of establishing, developing, and running a new and self-owned business to with a view of making profits and expanding the business. We are living in an era when the speed of innovation and invention is more in all the sectors and entrepreneurship has been identified as an engine of economic and social development of the country. Creativity and innovation play an important role in entrepreneurship. Without creativity and innovation, it is difficult to established a self-owned business, creativity and innovation contributes more to the entrepreneurship. Pandemic covid-19 is such a dangerous thing that shakes all the industries, on this time with a creativity and innovation an entrepreneurship operates its activities and survives. Innovation is a new technology, a new idea, and a method, such as an invention. To develop the business, it is important to adopt the new technology to give better and faster services to the customers. Here, the paper explores a broader understanding of innovation and

creativity in entrepreneurship post covid-19. Objectives are, to study the overview of creativity and innovation in entrepreneurship, to understand the role of innovation and creativity in entrepreneurship post covid-19, to analyse the impact of covid-19 on entrepreneurship. This research has done on the basis of primary data as well as secondary data. Findings are, this article is found out the relationship between creativity and innovation in the entrepreneurship, with effective creativity and innovation how an entrepreneurship can lead its business very smoothly in the times of covid-19 also, and the role of innovation and creativity to adopt the new strategies in entrepreneurship after covid-19. Conclusion, with the effective innovation and creativity an entrepreneurship can sustain with whatever the situation is, such as a big pandemic called covid-19. It can be concluded that there is a strong relationship between creativity, innovation and entrepreneurship that results in a smooth running, increasing sales and profits and expanding of the business.

AFFILIATED TO BANGLORE CITY UNIVERSITY

E-MAIL ID – natha3462@gmail.com

Abstract

Innovation and management are the key elements of economic progress in building a competitive advantage, and innovation is an essential driving force in the economy. Innovation is considered one of the essential characteristics of results in economic companies, which are understood as scope units to reach customer satisfaction and perceive their desires. Management requires managing organized people in a group. Product innovation replaces old products and helps enter new markets. Product management helps deliver the product to the right place on time and produce quality goods. Product management includes inbound and outbound activities. The environmental sustainability of economic growth is a fundamental success and outcome of innovation. This research study emphasized the evaluation and management of each stage of the product conceptualization process. Historical research on innovation behaviour leads to this important insight. Organizational decisions about innovations are critical but difficult and often fail to act. Organizations, whether large or small, manufacturing or service, consumer or industrial

products, public or private sector, are increasingly realizing the importance of managing their innovation activities in developing a competitive edge for the tangible or intangible products they offer. However, recognizing its importance does not imply having the ability to perform their innovation activities, nor does it necessarily result in their actually devoting corresponding efforts to developing those activities. In this context, it is important to gain an understanding of product and innovation management for the benefit of any organization. First, the paper begins with a discussion of product mix concepts and aspects of product management considerations. Secondly, the paper discusses innovation strategies in the context of product management based on customer satisfaction. This article examines the impact of new trends on product innovation. Finally, it includes learning objectives on the importance of product and innovation management.

ROADBLOCKS TO ENTRY AT WORKPLACE FOR INDIVIDUALS WITH DISABILITIES IN INDIA

Dr. Devpriya Dey,

Assistant Professor – Alliance University,

Bangalore, Karnataka,

devpriya.dey@alliance.edu.in, 9902020913

Abstract

In India, there are around 3 crore people with disabilities, of which about 1.3 crore are employable, but sadly, 34 lakhs have found employment in a variety of fields, including organized, unorganized, and self-employment. In the private sector, there are just 0.28 percent of workers who are disabled. As per the Rights of Persons with Disabilities Act, 2016, there are certain provisions of incentives for the private employers. In the Government sector, reservation for persons with disabilities exists. Institutions such as NASSCOM and CII are also working towards creating employment opportunities for the disabled workforce. In addition to this, there are few more private sector employers running training and development centres exclusively for disabled people. In spite of such efforts taken, the current employment situation of the persons with disabilities looks quite dim. This exploratory research paper makes an attempt to understand the reasons for roadblock to entry at the workplace for the persons with disabilities in India. Qualitative approach of data collection has been adopted for this research. Reports from reputed bodies such as ILO, World Bank, Government websites as well as research

papers, articles from online media have been carefully considered for data analysis. Overall, this research will form a foundation for conducting in-depth research exploring the factors causing hindrance in the employment pathways of persons with disabilities in India.

THE ROLE OF EDUCATION IN ATTAINING SUSTAINABLE POVERTY ALLEVIATION: A COMPARATIVE STUDY

Bhavya.L,

Assistant professor,
Nagarjuna Pre University college,
Yelahanka, Bangalore

Abstract

The term poverty and its implications are multifaceted and highly correlated leading to a complicated abyss of endless penury. Rural revitalisation aims to consolidate the achievements of poverty alleviation. Furthermore, enhancing the sustainable poverty alleviation ability of rural poor in poverty-stricken areas is a critical concern. The objective of this article is to give a comparative study of two countries, India and China -policies, regulations and government measures are analyzed. To bridge the link between poverty alleviation and rural vitalization, to investigate the capacity loss of poverty groups in different dimensions. This article is prepared on the basis of secondary sources. Findings of this article is to understand the sustainable poverty alleviation capabilities in rural poor like physical quality, education level, production capacity, participation capacity, information acquisition capacity and resource utilization capacity. Limitations of this article are based on secondary sources. It can be concluded that the Government has taken necessary measures to improve the quality standards of life through education rather than

giving tangible assets, which is a temporary fix. Since without proper education that attained financial status will be short lived, it is not feasible to improve their condition by allocating resources or any other form of wealth. Keeping these in mind the way of sustainable poverty eradication lies within the level of youth education.

KEYWORDS: sustained poverty alleviation, youth education, standard of living, government measures.

Abstract

At present the major challenge of any industry is to retain their talented employees. Due to technology growth and wide choice of employment. Especially after the introduction of NEP 2020, where the enhanced curriculum is added to the student's syllabus which might in future produce the students in such a way would meet the requirements of needs of the industries. Hence the need for satisfaction in a job becomes a challenge for the companies in upcoming days. Satisfaction and turnover intention well fit the teaching profession too. The present study is an attempt to understand the job satisfying factors and to know whether these factors

have any positive relationship or adverse impact on the turnover intention among the faculty members who are working in colleges, Karnataka, India. The purpose for making the study on the teaching faculty is because one the most important victims affected due to covid is the teaching profession. Technology application leads to increased stress and students drop out increased, where the situation became much worse and turnover intention has increased. No proper payment of salary on time and no payment of salary in certain cases lead to increase in stress level. To enrich the study the researcher has taken 10 selected job satisfying factors in order to better understand the needs of the employees. The reliability check is made by applying Cronbach alpha test, Regression analysis and correlation is applied to check the significance level of the study. The result of the study shows a few selected factors such as Working environment, Administration policies and safety and security has positive impact on turnover intention, whereas the rest seven factors shows negative impact on turnover intention. The Correlation analysis exhibits that there is a significant relationship between job satisfying factors.

Keywords: Job Satisfaction, Turnover intention, Employees, Stress, Colleges.

POST-COVID PRIMARY EDUCATION LANDSCAPE: MANAGING HR IN GOVERNMENT SCHOOLS AFTER THE PANDEMIC.

Mr. Chinmaya Prakash

MBA-PGDM, (PH.D)

Nagarjuna College of Engineering and Technology,
Karnataka, India.

Abstract

Introduction: Covid-19 has been an unprecedented challenge that has created massive human problems. It has impacted all aspects of life including the education sector. It has led to diverting of CSR funds from education to the health sector. This paper examines issues involved in re-opening of schools in the post-pandemic phase.

Objectives of this study: This study attempts to understand challenges involved in reopening of schools in the post-Covid-9 phase and how HRM can address these challenges. After examining how to coordinate the activities of NGO-Corporates and HR in schools, it suggests HRM solutions to the problem of post-Covid schooling.

Methodology: This study relies on secondary analysis of available literature in the specific area of interest.

Results and discussion: Results show that there has been a major setback to the working of the school system due to the pandemic. As a result, academicians, parents and students face multiple issues in adapting to the present situation.

Based on reviews of several HRM strategies to recuperate failing organizations, this paper suggests a seven-step guideline for HRM in primary schools.

Conclusion: It is apparent from the reviews that returning children to school during post-pandemic is a complex problem. HR work in schools involves capacity building of teachers, sensitizing the school management and working with multiple stakeholders.

Keywords: Covid-19, Corporate Social Responsibility, CSR, Human Resources Management, HRM, Primary education.

EXPLORATORY ANALYSIS AND PREDICTION OF EMPLOYEE RETENTION USING ML

Ms. Smitha.S

Email:smitha.s671@gmail.com

Abstract

Human resources are the life-blood of any organization. Even though most of the organizations are now found to be technology driven, yet human resources are required to run the technology. They are the most vital and dynamic resources of any organization. The biggest challenge that organizations are facing today is not only managing these resources but also retaining them. Securing and retaining skilled employees plays an important role for any organization, because employees' knowledge and skills are central to companies' ability to be economically competitive. Employee Retention is the competency of an organization to maintain its employees. The concept is emerging as a key setback to organizations. Companies employ several methods and access many sources to inform their retention strategies. The main idea of this project is to examine the talents which companies want to develop and maintain to predict employee training. This study is an exploratory methodology. The data is collected using Secondary data collection which was primarily collected by the website ai-jobs.net as a survey. Though commonly

used, exit interviews are reactive, not proactive, approaches for developing retention strategies. For an exit interview to occur, an employee must leave the organization. Most organizations, however, rely on exit interviews for critical information about why people are leaving. Human Resources managers use the data from exit interviews to develop initiatives to promote retention.

Keywords: Employee Retention, Human Resources, Job satisfaction

A STUDY ON “STRATEGIES ADOPTED FOR EMPLOYEE RETENTION IN AN ORGANIZATION PRACTICES POST COVID 19

Nayana

Chikkaballapur-562101

Abstract

Human resource is the person or group of persons in an organization who manage all the things related to their employees, that is, training, development, salaries, retention of employees, other benefits and the activities related to the employees. Employee retention is nothing but an organization's ability to retain the employees and prevent employee turnover. After this pandemic it is difficult to retain the employees in the organization. So here our paper is only stressing on the strategies adopted to retain the employees in organizational practices post covid. The goal of this article is to analyse the impact of post covid on employee retention, the factors and strategies adopted for employee retention, and its positive and negative impact on organization. This article is prepared on the basis of secondary data. Findings of the study is that, category wise

how to retain the employees after covid-19 and its impact and what are the benefits that has been given retain in an organization. Limitation of this article has been done on the secondary data. In conclusion, employee retention strategies should be a part of every aspect of an organization's principles and operations.

Key words: Employees, Employee Retention, Organization, Post Covid, Human Resource.

GAMIFICATION STRATEGY AND ORGANIZATIONAL TRAINEE OPINION OF ONLINE TRAINING DURING THE EPIDEMIC OF COVID-19

Chethan Kumar K,

Research Scholar, Dept. of Management,
ISBR Research Centre, Bangalore

Abstract

The coronavirus pandemic (COVID-19) has pushed educators and organizations to quickly change their training methodologies and to shut them down from organizations of all levels, including employees at high level and low-level management. They all investigated the utilization in the COVID-19 programme and evaluated the learning and motivational consequences of new employees. In principle, organizational trainees have reported the unique, engaging and efficient technique of gamification to provide curriculum material, furthermore, it has been considered an enjoyable exercise. Some pupils said video conferencing gamified helped connect their peers with social support during isolation time. However, as a result of confinement, several trainees reported a poor physical or psychological state and did not engage in the activity. The limited sample size is one of the limitations in the study examined, making it hard to extrapolate its result to other settings of study. The outcome of this study is mostly based on subjective perceptions;

however, a sense of learning has been expressed during the exercise. Some research has shown that superior learning has been attended to compared to traditional learning. Gamification can nonetheless be carried out in conjunction with regular lectures and can be a beneficial tool in post COVID times.

KEYWORDS: Gamification, COVID-19, Perception, organizational trainee.

CORPORATE SOCIAL RESPONSIBILITY OF TATA COMPANY AND ITC COMPANY: A COMPARATIVE STUDY

Dr. Prasanna.T

Head and Assistant Professor of Economics

Department of Economics

Government First Grade College

Bhadravati – 577 301

Shimoga District, Karnataka State, India

Mobile: + 91 - 94819 89498

Email: dr.prasannaganiga@gmail.com

Abstract

Around the world stock markets fell, large financial institutions collapsed or were bought out, and governments in even the wealthiest nations have had to come up with rescue packages to bail out their financial systems due to the global financial crisis. Investors in the 21st century put CSR first. According to the latest European study on sustainable and responsible investment (SRI) the average annual growth of SRI (2) investments is close to 50%. Almost 20% of all capital in Europe is now invested explicitly in the areas of environmental sustainability and social responsibility. As countries faced the crisis, till date a question remains as to what should be done to check the menace. Nations came together for that matter, but still the threat remains.

Our study will focus the CSR of TATA Company and ITC Company on their role towards economic growth. We end up concluding that corporations should adopt reforms and act against corruption and insider business activities which were the basis for ignition for the crisis.

Keywords: CSR, Economic Crisis, Economic Accountability.

ANALYZING THE FACTORS INFLUENCING QUIET QUITTING

Dr.Ramalakshmi

KGI - Gunjur, Sarjapur road
Bengaluru

Mr. Raveesh,

KCCM- Koramangala
Bengaluru-34

Mr. CheluvaRaju

KCCM- Koramangala
Bengaluru-34

Abstract

After being mentioned in a post on the social networking site TikTok, the new term Quite Quitting gained widespread use. The term “quiet quitting” is understood as leaving your job after only doing the very least amount of work required of you. As a result, it is a bit misleading because the employee keeps their job and continues to get pay. To fully understand the impact on both employees and the organization, further research is needed on this relatively new phenomenon. For the research purpose secondary data analysis is used to look at a different angle on the original topic of a previous study or to try to find an answer to a new research question. The major goal of this study is to determine why employees of private firms leave their jobs and for what reasons. It is noted that the employees turn out to be quite quitters for these reasons - Low salary, few prospects for growth, a lack

of respect at work, difficulties with childcare, rigid work schedules, and inadequate benefits. Employees who “quiet leave” are making it plain to their employers what they require from them in order to be motivated and engaged. The requirements are unmistakable: a strong, welcoming atmosphere and extensive benefits that cover every facet of wellbeing. Companies and HR executives can better recruit and retain top talent while doing the right thing for their employees by recognising employee problems, promoting work/life balance, and fostering all elements of wellbeing.

Keywords: Quiet Quitting, work-life balance, work ethics, work boundaries, organizational expectations, organizational growth.

STUDY ON IMPACT OF CAMPUS PLACEMENT ON UNEMPLOYMENT

Indu¹, Dr. Satveer Kaur²

1. Research Scholar, Maharaja Agrasen University, Baddi Distt. Solan (H.P), indu.0031@gmail.com, 7837176813.

Keywords: Moonlighting, gig economy, secondary job.

WORK LIFE BALANCE ANALYSIS ON SELF-CARE TECHNIQUES FOR EMPLOYEES IN WORK LIFE BALANCE

SUSHMA P

Department of Commerce and Management,

Bangalore Institute of Management Studies,

Email Id: sushmaprakash2799@gmail.com

Mobile No: 903699282.

Abstract

Work-life Balance is a cycle, not an achievement. It is now playing a vital role in deciding the job-related performance of employees in any profession. With rigid work schedules people are finding it extremely difficult to have a personal space for them and their loved ones. Despite the resounding evidence that working long hours can be harmful to both employees and employers, many professionals still struggle to overcome their assumptions and their deeply ingrained habits around work hours. This paper aims to study causes behind the imbalances between work and personal life and the tactics that can be implemented by professionals to have stable work-life balance that ultimately leads to undisturbed mental health and also focuses on the negative implication of screen time to have proper hold on the habits that may turn into bad addiction. Developing a 5 different life goals that gives a working professional a blend of all elements (Health, Relationship, Career, Spirituality, Finance)

Keywords: Work life Harmony, Mental Health, Screen time, Personal Space, Productivity, Spirituality, Contentment

A STUDY ON CORPORATE SOCIAL RESPONSIBILITIES (CSR) IN INDIA, ITS APPLICABILITY, LAW AND DISCLOSURES

Abstract

The concept of Corporate Social Responsibility has become a key aspect of business all over the world. As per government's initiatives, these are reflected in the new Companies Act 2013 which mandates CSR spend for a defined category of corporate entities. The corporation invests 2% of profits in integrating economic, environmental and social objectives with the company's operation and its growth CSR includes bringing value to the community and generating a positive impact. Scope of the study says about disclosure of CSR expenditure in financial statements and its provision relating to schedule 7 and its applicability under sec 135(1) towards net worth, turnover and net profits of the companies. Disclosure explains about expenditure whether

it is revenue in nature or capital in nature. It aims to reduce the social cost of industrial peace, improve the public image, provide moral justification, satisfy the stakeholders and enhance health by non-polluting measures. Our findings contend CSR disclosure as a means to improve a firm's investment behaviour when it is substantial because it mitigates information asymmetry, which eventually increases investment behaviour of firms.

A STUDY ON THE DISCLOSURE OF CORPORATE SOCIAL RESPONSIBILITY (CSR)

Ms. Deepika B.N

Assistant Professor

NCMS Chickballapur

Email : deepikabn57@gmail.com

Mrs. Latha K S

Assistant Professor

NCMS Chickballapur

Abstract

This paper reviews the disclosure of Corporate Social Responsibility (CSR) and the factors which determine CSR activities. There are many literatures reviews which state that board size, number of meetings and board independence are significant in Corporate Social Responsibility. This paper tries to explore the threat involved in the CSR disclosure. Recent trends in CSR activities are increasing in the financial as well as non-financial sector. Explanatory research design is used and secondary data were used to collect the required data for the study from Websites, journals and company annual reports. SPSS tools are used to analyse the data that was collected. The study's findings imply that the regulatory authority and the government should focus more on creating standardized principles of policies to gauge the extent of CSR practices for comparative reasons. In result, the company's transparency in its CSR reports will

boost both its financial performance and its reputation in comparison to its competitors. The analysis of the data was solely dependent on secondary data, making it possible that the authentication of the interpretation was inaccurate. As a result, further research can be done by examining primary data.

A STUDY ON CORPORATE SOCIAL RESPONSIBILITY IN INDIA

Vanitha. S

Assistant Professor,

Department of Commerce and Management,
Nagarjuna College of Management and Studies.

Abstract

Corporate social responsibility (CSR) is accepted as a means to achieve sustainable growth of an organization. As corporate companies are working within the society and taking the benefits of all the resources, it is its responsibility to contribute from its profit for the purpose of welfare and development of that society. It facilitates the alignment of business operations with social values and now it is rapidly picking up its space. In this endeavour this paper is an attempt to study about CSR law in India, companies which are liable for corporate accountability based on their reporting status, percentage of liable company reporting on CSR, mode of implementation opted by companies & reasons for not / under spending of CSR prescribed amount. The data has been collected from various secondary sources and it represents that creating shared value has been implemented successfully in India, somehow society is even getting benefit out of this.

A STUDY ON “WORK LIFE BALANCE” WITH REFERENCE TO UNDER GRADUATES

Vindya P.R

Final year BBA

Nagarjuna college of Management Studies

E-mail: vindyap52@gmail.com

Contact no:8748807616.

Abstract

Work life balance is the state of balancing both personal life and professional life. This Widespread interest is partly due its reflection on all aspects of life. Work life balance of students means balancing the both, the studies, cultural, sports and personal life. Balancing the course and career becomes the core of life. The main objective of the study is to reduce stress, taking initiative, balancing time, Decision making, to know priorities in life, to focus on goal, maintaining a good balance in life during college will give you a better experience. Stress can have an impact on your health. Regular exercise and meditation can help you relieve stress and from depression. Identify Time management strategy: be sure to include in schedule activities, prioritize your task, understand yourself, spend time with friends & family which gives you mind peace, Happiness. Self-motivation and reward yourself. Purpose to analysing this topic is that most college students are taking a burden, and to use time effectively. This study is done on the basis of primary and secondary data. This paper provides insight to student's life in the aspects of balancing their career, cultural, personal life, studies. Time management with an

overall equation balancing with utmost responsibility. The findings of the study is, it is not a difficult and easy task to balance the life of students. We find out that some strategies need to adopt to balance the personal and students' life, because of lack of time management the students facing the many problems by this they cannot take proper decisions related to their life. Finally, we can conclude that work-life balance plays a significant role in everyone's life, balancing education and work. By managing a time effectively, responsibility towards work reduces stress.

Abstract

Human resource is considered as the important asset for any organization as the economy grows and expands itself to be in the competitive era. Attracting and maintaining human resources is an effective task for every IT sector. Moonlighting is a practice where the employees can choose a second job or other work assignments along with their full-time job, especially in IT sectors people are selecting

moonlighting concepts due to dissatisfaction of working conditions and economic consideration. The main objective of this study is to understand the concept of moonlighting and the impact of moonlighting policy on employee's health and safety as well as their ability to balance work and life. This research is based on primary as well as secondary data. The primary data will examine various aspects of employee moonlighting by taking samples of 50. The secondary data are compiled from journals and articles. The main scope of this study is that there are many reasons why employees choose to take on a second job because of monetary consideration to fulfil needs related to psychological health. It has both positive and negative impact on organizations like low productivity, loss of business information and employee safeties and well-being of employees. Finally conclude that the most important HR concept of moonlighting policy can accomplish both organizational and personal achievements by increasing performance effectively and can lead an effective life.

Abstract

Human capital management (HCM) is the process of managing people in an organization in order to maximize their potential and contribute to the organization's success. Generally, HCM includes all activities related to managing people, such as recruitment, training, performance management, and compensation. The U.S. Securities and Exchange Commission (SEC) issued new guidelines in 2020 to help organizations improve their human capital management disclosures in their annual reports. The main objective of this research is to throw light on the guidelines that provide organizations with a framework for disclosing information about their human capital resources, such as the size and composition of the workforce, labor costs, and employee benefits. This study aims to discuss human capital risks and opportunities, as well as how to address diversity and inclusion. Another important aspect of this study is to explain how the SEC is encouraging organizations to use the guidance to provide investors with a better understanding

of their human capital management practices. The article follows descriptive research methodology and the data is collected from authentic secondary sources. The conclusion of this study explains the latest guidelines for disclosures given by SEC, various human capital risks and opportunities and also brings out the latest happenings in the disclosure domain.

HALFWAY OUT! FACULTY ATTRITION AT HIGHER EDUCATIONAL INSTITUTIONS

Ms. Sindhu Y M

Final Year BBA

NCMS, Chickballapur - 562101

Mrs. Meena C

Assistant Professor

NCMS,Chickballapur-562101

Abstract

Halfway out of faculties does not literally mean faculty or staff silently walk into your office with a resignation letter, drop it on your desk, and leave without a word rather, it is an employee's slow and insidious disengagement. The study has tried to highlight the factors that cause faculty attrition in higher education and the tools that should be considered for faculty retention. The study uses a mixed method of research design, both secondary and primary sources were used to collect the required data based on review of literature Structured Questionnaires were framed and it was circulated where all information across chikkaballapur district for about 100 faculties. The data was later analysed using the SPSS tool. Findings of this study states that review on Quite Quitting, these are classified as the inadequate pay, unrecognized by a monolithic reward system that does not appreciate the interests and skills of faculty, conflicting concepts of learning of teaching, conflicts between desired and actual support given to students. The

study concludes that institutions must think of retaining faculties and should produce strategies in order to manage talents then only institutions can think of running quality management education at a global level. Future scope of the study enhances that the study can help in designing the strategies to manage and retain the experienced and talented faculties in the institution by ascertaining the causes and the limitation of the study is that the sample size is limited, and scope of the study is limited only to chikkaballapur district.

A STUDY ON THE RELATIONSHIP BETWEEN EMPLOYEE WELL- BEING AND EMPLOYEE ENGAGEMENT

Dr. Anandamma N

Principal, Nagarjuna College of management Studies,
Chickballapur-562101

Kavitha C

Assistant Professor, Nagarjuna College of Management Studies,
Chickballapur-562101

Kusuma S

Assistant Professor, Nagarjuna College of Management Studies,
Chickballapur-562101

Abstract

In a workplace, we believe that employee engagement is the most significant variable; it is an emotional concept which may lead to increased discretionary efforts. Employee well-being is the most important and independent moderating variable which is very essential than employee engagement. They both are intertwined independent variables that are most essential in every field. The aim of the study is to understand the relationship between employee well-being and employee engagement and also analyse the strategies needed for the well-being of human resources. The purpose of the study is to evaluate the process of well-being of human resources for the effective engage in work. Because of time constraints this article is written on the basis of

secondary sources. It is analysed through this study that the maximum percent of employees are not effectively engaged in their work because they were not emotionally well. It is concluded that everyone must require both the concepts i.e. well-being and engaged in their work. If we are not well externally then we can handle the situation, but if we are emotionally not well then it is having a greater impact on our every work, so to carry out our work, employees must internally and externally fit to engage themselves effectively and efficiently in their work.

Background

For an organization, the most valuable resource is its human capital. Attracting and retaining human resources is a challenge in the age of global competition as the economy grows and expands. The Covid-19 epidemic has altered how people view their actual working environment. It has also created a tough situation for an organization for retaining its employees without a physical work space. The most crucial step in reducing face-to-face conversation and touching the world of today. An organization needs to establish a high work-life balance in order to draw in and retain employees. Nowadays, a significant number of employees do moonlight. Employees take on multiple jobs to supplement their income and obtain job stability as a result of the various economic shifts and insecure employment conditions. Due to numerous reasons, employees frequently work two jobs or start a business in addition to their current position. It's known as moonlighting. It has advantages

as well as drawbacks. Employees who work second jobs raise a number of ethical concerns. Both employers and employees face difficulties as a result.

This research paper aims to evaluate the requirement for employees to moonlight and its effects on managers. Employers should focus more on preventing conflicts of interest than restricting employees from moonlighting. A matter that has consistently persisted but recently gained significant attention as a result of the COVID-19 pandemic has to be addressed is the perception of professional assurance and how it influences the behaviour of the employees. Due to employment insecurity, a need for more income, and dissatisfaction, one such phenomenon is the practice of moonlighting, which entails working a second job outside of regular business hours.

Objectives

- The aim of the study is to investigate the impact of employee “Moonlighting” on organizational growth post - COVID pandemic.
- To understand the intention of employee moonlighting and its necessity.
- To examine various factors affecting moonlighting.

Method

To understand the impact of employee “Moonlighting” on organizational growth post - COVID pandemic. we sought to study the conceptual research and frameworks proposed by various researchers in numerous fields of human resource

management. We will be focusing on shedding some light on the factors which influence employees for moonlighting mentioning their positive and negative consequences.

Results

We will be concluding the analysis of the conceptual research. Also, we will highlight the factors which are positively and negatively affect the intentions of moonlighting for an individual employee.

Conclusion

The impact will be concluded from the study of the effects of moonlighting on employees as well as employers especially post - COVID pandemic. In reference to the work culture as well as the environment needed to avoid the moonlighting circumstances. We will be depicting a link between employee intention as well as performance which ultimately affects the organizational workings.

Keywords: Moonlighting, Organizational growth, Job satisfaction, Ethical Dilemma, Post COVID pandemic.

REALIZING CORPORATE SUSTAINABILITY STRATEGY IN THE FACE OF GREEN ACCOUNTING INFORMATION DISCLOSURE: EVIDENCE FROM INDIA

University, Noida
Email: sgupta18@amity.edu

Dr V. K. Gupta

Professor at Department of Finance and Accounting, Indian
Institute of Management, Indore
Email: vkgupta@iimidr.ac.in

Abstract

The emergence of the notion of sustainability, an increase in environmental awareness and understanding, and the enforcement of environmental regulations have eventually led towards the disclosure of corporate environmental information. As part of their Corporate Social Responsibility (CSR) reporting initiatives, corporations are increasingly concerned about revealing green accounting information. When it comes to disclosure, green accounting encompasses

both financial and non-financial data (such environmental performance and policy) being included in annual and social responsibility reports. This study attempts to fill a knowledge gap by exploring the perspectives of industry insiders and academics on the hurdles that stymie green accounting disclosures. In order to evaluate the quality of green accounting disclosure, this research primarily applies content analysis methodology on the annual reports of listed Indian enterprises in the industrial equipment manufacturing industry. The complexities of green accounting disclosure are contextualized through semi-structured interviews with ten key managers and ten academics (subject expert).

It is apparent that Indian companies place a greater emphasis on publicizing their environmental policies and responsibilities than they do on sharing information on environmental finances. The lack of clarity on legal requirements pertaining to green accounting, inadequate green accounting reporting theory, lack of awareness and knowledge, the shortage of environmental accountants, unclear and conflicting job roles, cost concerns of the firms, lack of motivation from government and fear of change, and the absence of robust non-governmental organizations are viewed as the most significant obstacles to the development of green accounting disclosure. Due to the ongoing evolution of green accounting standards, this research should be valuable to regulators. The findings of this study contribute to the expanding body of literature on green accounting and reporting.

STUDY ON CRYPTOCURRENCIES AND BITCOINS IN INDIA AND ITS IMPACT ON INDIAN ECONOMY

Arpitha K

Assistant professor

Department of commerce & Management

BIMS College

Abstract

Bitcoin has become a fixture in today's modern society, a source of innovation and mystery, and has begun to change the way we think about currency. Crypto currencies & bit coin have emerged as important financial software systems. They rely on a secure distributed ledger data structure. A cryptocurrency, is a digital currency designed to work as a medium of exchange through a computer network that is not reliant on any central authority, such as a government or bank, to uphold or maintain it. Researcher have been selected analytical research methodology for the this study. Source of data is from newspaper & different websites. The objectives of this paper are to understand the future of cryptocurrency in India , regulation on Cryptocurrency. There are several restrictions on the existence of cryptocurrencies in India. This study is based on understanding cryptocurrency and its effect on the economy. The study is also based on existing scenarios and future prospects. We conclude that fraud through hacking could potentially pose a problem to

widespread adoption of cryptocurrencies as the absence of recourse against a third party such as a bank concentrates risk in holders of cryptocurrencies. Users should thus exercise caution and understand the risks before investing in cryptocurrencies.

Keywords: Medium of exchange, Digital currency, Computer network, Decentralized, Central bank digital currency

CRYPTO CURRENCY AND BITCOIN (BTC)

Dr. Annette Christinal

Assistant Professor School of Commerce and Economics
Presidency University, Itgalpura
Bengaluru, Karnataka, India.

Madhankumar P, Dharshan B

Student of BBA School of Management
Presidency University, Itgalpura, Bengaluru, Karnataka, India

Abstract

This paper identified the understanding of crypto currencies ,candle sticks pattern ,support and resistance, chart pattern analysis, stoploss including bitcoin and the block chain in the trading. Crypto currency has become one of the hot topics in the global financial system. Due to the fast development in BTC it needed to understand the factors that influence its value formation. If we look for the speculative assets, stocks has always been the best choice, but the crypto is being promising even though from its volatility factor which could be more riskier than stocks. Crypto currency which includes utility, payment, security and stable coins. These also are DeFi tokens, NFTs and asset backed tokens. Of all cryptocurrencies, the most common are utility and payment tokens. Cryptocurrencies are created (and secured) through cryptographic algorithms that are maintained confirmed in process called mining, where a network of computers or

specialized hardware such as application specific integrated circuits (ASICs) process and validate the transactions .The process incentivizes the miners who run the network with the cryptocurrency. Bitcoin, ether, Litecoin and Monero are popular cryptocurrencies. Candlesticks are the way of communicating information about how price is moving. Candles refer to that information for the specific unit of time.

And thus, each candle constitutes, the open, close, high, and low price for that given day. There are lot of types of candle sticks in the trading some of them are MARU BOZU, DOJI, HAMMER, SHOOTING STAR, SPINNING TOP etc...The bullish pattern indicates the uptrend and the bearish pattern indicates the down trends. In trade technical analysis, support and resistance are certain technical analysis, support and resistance are certain predetermined levels of the price of a security at it is thought that the price will tend to stop and reverse. Support is a price point below the current market price that indicates buying interest. Resistance is a price point above the current market price that indicates selling interest.

Chart pattern analysis can be used to make short-term as well as long-term forecasts. The data used by the chart patterns can be scalping trade, intraday trade, swing trade, positional trade. Gaps and reversals may form in one trading session, while broadening tops and dormant bottoms may require many months to form. Stoploss is that predetermined price limit which is set to minimize the loss of the trade holders .In most case , the investors set their stop loss order a brief

time period when they are either on a vacation or unable to monitor their stocks. However, stopless is beneficial if the stock market is declining in steady and orderly manner. Incase, the stock market is declining in a disorderly manner then stop loss could also subject stockholders to losses. Your target amount should be 1.5 times the stop loss percentage. This paper discusses about the impact of crypto in the trading sector and analyzes the risk factors considered by the investors in participating in the investment of virtual currency.

Abstract

The COVID-19 pandemic had a major influence on consumer behavior and usage intention, leading to social distance and decreased physical contact. Previous research on digital payment usage intention has been unable to explain adoption behavior in crises. The purpose of this study is to look at the factors that influence consumers; digital payment usage intentions post COVID-19 pandemic to widen the reach of technology adoption after an emergency. The primary goal of this study is to assess the impact of the COVID-19 epidemic on consumer perception in India, specifically regarding the usage of digital payments as a safe means of payment in the banking industry. The assumption of digital payment usage intention is based on perceived usefulness, perceived ease of use, perceived covid 19 risk and perceived government support. In this study, a theoretical Technology Acceptance

Model (TAM) framework was used to explain the effect of the pandemic situation on technology usage intention, along with two additional variables, perceived covid-19 risk and government support. Online questionnaires were used to collect primary data from 228 valid respondents. The structural model and measurements were tested using the partial least square path modeling approach. The current study serves as a guide for organizations that provide digital payment services to individuals, assisting them in identifying the factors that make the entire digital payment process simple and useful for an individual.

Keywords: Digital payments, Pandemic, Government support, Perceived ease of use, Perceived usefulness, Usage intention

ROLE OF BIG DATA FOR INSURANCE SECTORS

Radhika Sreedharan,

Assistant Professor, Computer Science and Engineering
Presidency University, Bangalore

Abstract

An auto insurance company can use the GPS data from cars to calculate the risk of accidents based on travel patterns. The automobile companies can use the car sensor data to track the performance of car. Safer drivers can be rewarded and the errant drivers can be penalized. The insurance sector companies work to guarantee insurance contracts for uncertain situations. The industry comprises different players that operate in different spaces. The insurance industry works on a basic concept where one party, that we call an insurer, guarantees payment for uncertain future events. Meanwhile, the policyholder, also called the insured, pays a premium at fixed intervals to the insurer in exchange for that protection on that uncertain future occurrence. As an industry, the insurance industry is considered a slow-growing industry and a safe sector for investors. We often hear the term underwriting in the insurance industry which refers to the process of taking financial risk for a fee by an individual or an institution. The insurance industry, for a long time, has been known for leveraging traditional business models. The industry continued its legacy business and products for quite some time. But with the intervention of modern-day technologies, the industry witnessed some

favorable outcomes. The industry has witnessed the exponential growth of the use of technology like any other sector. Advanced technologies and digital platforms have allowed insurance companies to try new means of tracking, measuring, and controlling risk. The introduction of various technologies has evolved the insurance landscape. Tech solutions have enriched the industry. Some of the key technologies that are being used are the Internet of Things, artificial intelligence, Blockchain, Machine Learning, Big data analytics, and Insurance Management platforms.

The insurance industry has always thrived on data analytics to target its customers. Different types of insurance companies such as travel insurance companies, health, and life insurance companies, P&C insurance companies, etc., rely on statistics to segment their customers. Accident statistics, policyholder's personal information, as well as third-party sources, help to group people into different risk categories, prevent fraud losses, and optimize expenses.

The shift towards digital platforms has opened the door for new sources of information that can be used to understand the complex behavioral patterns of a customer and precisely determine his or her segment. For insurance purposes, big data refers to unstructured and/or structured data being used to influence underwriting, rating, pricing, forms, marketing, and claims handling.

The main objective of this paper is to explain the role of big data in insurance sectors. The insurance industry is using big data in several ways like Customer Acquisition, customer retention, risk assessment, fraud prevention and

detection, cost reductions, personalized service and pricing and effects on internal processes. Every business needs to acquire customers to generate revenue and if the process of acquisition can be made efficient, that would make things simpler. A business is considered to be successful if its customer retention rate is higher. Big data technology can increase the efficiency of the whole process of risk assessment. Big data can be used to save insurance companies against such frauds. Big data technology can be leveraged to automate manual processes, making them more efficient and reducing the costs spent on handling claims and administration.

Big data affects various segments like health and life insurance, travel insurance, property and casualty insurance.

Keywords: Big data, insurance, customer retention, customer acquisition

ROLE OF FINTECH AND DIGITAL FINANCIAL SERVICES IN INDIA

Bharathi N R

Asst. Prof. BIMS College

Dept. of Commerce & Management

Bangalore

Abstract

The Financial Stability Board defines FinTech as the technology enabled innovation in the financial services that could result in new business models, applications process or products with an associated material effect on the provisions of financial services. It is playing a dynamic role in increasing financial insertion and digital adoption. This paper aims to understand the financial technologies and digital service used in the banking sector. To understand the trends in digital payment in India digital Retail Payment indicators data from 2018 to 2022 is taken from RBI report. It is found that there is an increase in value of transactions in credit transfers, Debit transfers and direct debits, card payment, whereas paper-based instruments are declining in value.

Keywords: Fintech, digital finance, NPCI

INNOVATION AND ADAPTION OF DIGITAL FINANCIAL SERVICES IN EMERGING MARKET

R. SHWETHA

VET First Grade College, JP Nagar, Bangalore
Shwethar.lakshmi@gmail.com
Mobile: 9886332974

Abstract

The technological expansion has been a major driving force behind the growth of the banking sector in India just to make sure the satisfaction of the customer is met. Technology is playing a very important role in today's world. Previous banking was a highly time-consuming process, but it doesn't remain the same as digital financing was introduced in India, transactions have certainly become easy and instant. Digital banking was first introduced by ICICI Bank in the late 1990s to their retail clients. Digital banking became main stream in 1999 due to the reduction of interest charges and a built-up awareness and trust towards internet and its services. This has now become a platform for all banking customers where transactions can be done with the higher speed, accuracy. This digital financing has taken a better twist after the implementation of DIGITAL INDIA by our Prime Minister Shri Narendra Modi on 1-7-2015, with an objective of connecting rural areas with high-speed internet networks and improving digital literacy. Today 90% of

banking customers are using Digital banking.

This study focusing on how banks developed innovative products and services and its adaption to ensure customer satisfaction and information obtained on the secondary source.

Keywords: Financial services, Innovation, Transaction service, Digitalization, Online Payment.

DIGITAL FINANCIAL SERVICES: AN ANALYSIS OF SIGNIFICANCE OF DIGITAL FINANCE TOWARDS CASHLESS ECONOMY IN INDIA

Sudharani.L

Department of Commerce and Management

BIMS college Bengaluru

Sudharanilotus@gmail.com

Abstract

In the few years India has taken some eventful steps for the whole nation aimed at the greater changes in the economy such as demonetization. The basis for this was always working towards ‘cashless economy’ the covid-19 pandemic which brought about social distancing, lockdown forced society to highly dependency on Digital payments. Digital Finance is the delivery of Traditional finance services digitally, through devices such as Computers, tablets and Smartphones. Digital Finance can also lead to greater economic stability and increased financial intermediation, both for customers and for the economy where they and their family resides.

Digital Finance work better for individuals, businesses and Governments. The cashless economy will reduce the production of paper currency and coins. The cashless economy in India has been amplified with the Indian Government’s initiative of Digital India. This flagship programme with a vision to transform India into a digitally

empowered society and knowledge economy. Digital finance has the potential to provide affordable, convenient and secure banking services.

This study is mainly focuses on role of Digital Finance towards cashless economy during pandemic.

Abstract

Green banking differs from traditional banking. It focuses on promoting environment friendly banking. Green banking refers to the banking in such a manner that helps for overall reduction of internal carbon footprint and external carbon emission. . Green Banking makes great contribution to the transition to resource efficient and low carbon industries i.e. green industry and green economy in general. The objective of the present study is to understand the use of green banking products in banking sector and examine the green banking initiatives taken by private sector banks. The research focuses on understanding the customer's views about green banking services, their satisfaction level, effectiveness and benefits of green banking. Collection of data is limited to

secondary data. An extensive literature review is taken place on the title. This study also covers the recent developments are made by Indian banks for sustainable development and challenges faced by banks in implementation. Coming to the findings, there is utmost need to create awareness, implement and follow green banking as much as possible in today's business world of innovative technologies so as to make our environment human friendly and enrich the sustainability. With dearth of studies on green banking in India, the present qualitative study contributes to the body of knowledge and paves way for future research in green banking for sustainable development.

Karnataka

Abstract

GST is the one of the forward-looking steps in fiscal reform initiated by the Government of India towards achieving one nation with one tax and one market. Like all radical changes, GST also brings advancement and reforms with its inherent amount of risks and challenges. The Banking service sector in India is prone to face more hardships than other service sectors. Banking sector is one of the important service industries of India, which contributes more than 7.7 percentage to the GDP. Because of their varied nature of operations and pan India prevalence, compliance of the new tax regime GST is a major challenge for the banking sector, and in the long run, it will make the whole taxation process smooth, fast and comprehensive. The purpose of this study is to know the challenges faced by the Banking sector and its effects on the customers after the implementation of the GST. New tax Regime made an incredible step by the abolition

of centralized registration of the banks. Now all the bank branches have to register under GST in each state for the smooth functioning. The tax rate has created an impression in the banking sector that the sector is contributing much toward the economic growth of the country. The study is descriptive in nature. The method used for the collection of data is only a secondary and observation method. In this paper an attempt was made to know what are the issues and challenges faced by the Indian banking sector after implementation of GST.

Keywords: GST, Banking sector, challenges faced by Indian banking sector, Issues of GST.

AN EMPIRICAL STUDY ON ADDING VALUE TO DIGITAL FINANCIAL SERVICE

Mr. Kaushal J

Final Year B. Com
NCMS, Chikballapur.

Mrs. Meena C

Assistant Professor
NCMS, Chikballapur.

Abstract

The goal of digital financial inclusion is to provide a range of formal financial services that are responsibly delivered at a cost that is accessible for clients and sustainable for providers to populations that are currently underserved and financially excluded. The purpose of this study is to demonstrate that a cashless system is not only necessary but also crucial to the current system. Knowing this, the goal of this study is to outline such difficulties and create a framework. Research method: To collect data, the exploratory research design was used. Primary and secondary data were used for the study's purposes. The data required for the study were collected using an interview schedule. The study's secondary data was gathered from websites, journals, magazines, census reports, and books. Findings of the study is the use of Digital Financial Services has increased significantly in recent years, particularly in developing countries, due to the increasing availability

of mobile phones and internet access. The review finds that mobile service adoption has not reached customer expectations in terms of intention and usage. Conclusion: Digital financial services enable unbanked individuals to access financial services using digital technologies, but not everyone has received the benefits of digital financial inclusion equally. The accessibility and functionality of technological advancements for digital transactions should be improved throughout the nation.

Keywords: Financial inclusion, Online banking, Mobile banking, Digital Finance.

Abstract

The global reforms brought about a remarkable change in the banking sector in India. Banks drive in a highly liberalized, globalised, privatized and a competitive environment. Indian banking industry has witnessed a tremendous development due to sweeping changes that are traditional banking taking place to branchless banking or digital banking. Which services provide through the electronic medium called Digital Banking. Banking that is done through the digital platform without any paperwork is referred to as digital banking. Digital banking means the availability of banking services online. Digital Banking is creating a lot of changes in the banking industry. This paper attempts to evaluate the

awareness and use of digital banking by working women and home makers in Bangalore. The working women place a major role in the total customers of bank. The present study evaluates the efficiency, responsiveness, reliability and convenience of using digital banking services. For the purpose of the study, required primary data have been collected from questionnaire along with secondary data. A standard methodology has been adopted and various statistical tools have been used to extract the output.

Keywords: Digital banking, online banking services, globalized, high liberalized reliability.

Abstract

In this decade the term cryptocurrency has been in the spotlight all over the world. The number of users of cryptocurrency is growing day by day. The estimated 115 million crypto investors represent 15% of the Indian population aged between 18 to 60 years. Hence there is a need to study the emergence of cryptocurrency and the pros and cons of cryptocurrency as it will affect the economy of a country. The study is based on Secondary data i.e. Through magazines, journals, and related websites. The upsurge of cryptocurrency in business post covid is a matter of concern, thus the study aims to take a trip down memory lane, to understand the rise of cryptocurrency and demystify the benefits and areas of concern that a business entity should

focus on. The research also tries to understand teething problems with the implementation of cryptocurrency, and the reasons, effects and probable solutions. The results of the research till date, show to be positive towards the implementation of cryptocurrency in business activities, as there are more opportunities to dig in, than obstacles. It highlights the fact that the rise of cryptocurrency has enabled business organizations to directly transact without any third-party processors and thus has laid down a smoother functioning. However, few businessmen are also skeptical about the same. We expect that in the end, our research casts a new light on the ongoing issues regarding cryptocurrency that will aid the companies to make the right decision and implement the proper technology to have fruitful results.

Abstract

Cash movement in a business in two way traffic. It keeps on moving in and out of business. The inflow and outflow of cash never coincidences. Important aspect which is unique to cash management is time dimension associated with the movement of cash. Cash management is concerned with how a firm managers its cash levels and operations(cash collection & payments) cash investments & cash borrowing &lending. It is very essential for a business for long run & short term process. Cash management is a business organization desires to utilize available cash in most effective way but management of cash is not as simple. The primary aim of cash management is to ensure that there should be enough

cash availability when needs arises, not too much, but never too little. To maintain optimum cash balance. To keep the optimum cash balance requirements at minimum level by prompt collection & late disbursement. Cash management is to maintain sound cash position to maintain liquidity & use excess cash in profitable way. The cash management techniques are transaction motive, precautionary motive & speculative motive.

SJB Institute of Technology

Abstract

All investments, especially those made to advance environmental goals, must be held to a rigorous level of transparency in light of tightening budgets and intensifying competition in the global market. These days, companies care more about environmental sustainability as a means of bettering their CSR initiatives. Therefore, by utilizing green human resource management (GHRM), accurate predictions of environmental performance can be made (EP). In this work, we used bibliometric analysis to look at the trends in GHRM and EP scholarship and identify the areas where

further investigation is needed. This bibliometric evaluation looked at studies that analyzed how green human resource management (GHRM) and practices affected environmental performance. Seventy-one publications from Scopus covering environmental performance and green human resource management were reviewed for this study. To find the most referenced articles in this database, we conducted citation and co-citation analyses. Using the VOS Viewer software, keyword network analysis was also conducted.

Keywords: Green HRM, Environmental performance, Bibliometric analysis

INDIVIDUAL RESISTANCE TO ORGANIZATIONAL CHANGE & DEVELOPMENT PROCESS, WHEN IT APPEARS AS AN UNPLANNED CHANGE AFTER COVID 19

Mr. Kiran Kumar T N,

Department of Commerce & Management

Nagarjuna College of Management Studies, Chickaballapur.

Abstract

Change management has been defined as the adaptation which occurs in the overall work environment of an organization. When an organizational system is disturbed by some internal or external force, the change may occur. This change can be accepted or unaccepted. Acceptance will be in the form of exploration & commitment as an individual or as a group. Unacceptance may be in the form of Denial or resistance. Resistance to an unplanned change in the process can stimulate a healthy debate over the benefits

of the idea and result in a better decision. Resistance to change is not desirable. When it is counterproductive for the growth and destructive in nature. This paper mainly focuses on Individual Resistance. Individual Resistance to change is appears to be rational or emotional. But after Covid 19 many individuals accept the change though it comes as unplanned. This has impacted on Economic state of family, Employee Habits, Security, lack of communication, Comfort zone & Work life balance. This in turn impact on the group & influence the organisation as well.

Keywords: OCD, Resistance, Unplanned Change, Human reactions, Work life balance.

A STUDY ON “AN OVERVIEW AND ANALYSIS OF ETHICS IN MARKETING”

Ms. Krupa Gowda,

5th SEM B. Com, NCMS Chikkaballapur,

Mrs. Nagaveni M,

Asst.Professor, NCMS Chikkaballapur.

Abstract

In business ethics plays an important role. Ethical practices are what help establish trust between parties and provide structure for dealings. Marketing ethics is an area of applied ethics which deals with the moral principles behind the operation and regulation of marketing. The objective of this study is to Investigate and analyse the impacts ethics in marketing and the response of customers for the same. This study is done on the basis of secondary data. The findings of this research are that consumers are preferring and demanding for ethically produced goods over non-ethically produced ones. Advertising and pricing are the two main areas where unethical practices are seen most often. Marketing is the vast concept consisting the involvement of individuals, organizations and society at large. It is clear that advertising and price policies seem to be the most areas in which an unethical practice may often occur. Companies should have responsibility towards the society to provide environment friendly and ethically produced products and services. Loss of trust from customers, individual organization and social perception.

Keywords: Ethics, Marketing, Marketing Ethics, Advertisement.

vijaykat@srmist.edu.in

Abstract

The aim of the study is to examine the implication of digital marketing in consumer purchase decision and how it affects their purchasing behaviour, as well as how much of a role these channels play. 50 people participated in the survey that was used for the study. The chi square test is used to assess the survey results. According to the research, consumers are aware of digital marketing and prefer to buy electronic items and conduct their retail buying online. The study is conducted in a specific geographic area, which may be viewed as a constraint when evaluating all clients from other regions' purchase decisions. The function of digital channels is crucial as the globe transitions to the digital era. Because it gives a deeper insight of what motivates consumers to write content about a brand or store, understanding consumer motivations is crucial. Digital marketing is economical and has a significant

positive business impact. According to this study, it can also be stated that a significant element in ensuring the effectiveness of online marketing is understanding which social media platforms a company's target market uses. It is possible to analyse the success of Internet marketing in relation to various businesses. The study can be expanded to examine internet marketing strategies that are unique to different types of firms.

Keywords: Customer Purchase Behavior, Digital Channels, Digital Marketing.

A STUDY ON PERCEPTION OF CUSTOMERS TOWARDS QUALITY OF CADBURY COMPANY AND IMPACT ON BRAND IMAGE OF COMPANY

Asst. professor (Dept. of commerce)
NBC Degree college Byrati cross, Bangalore

Abstract

Digital marketing plays a vital role in economic development of a country. Digital marketing is all about delivering advertising over an electric medium such as search engine, website, social media, e-mail and mobile apps. In my research all about role and effective, growth of digital marketing. Simple random sampling method used for collecting the data. It helps to identify customers before they make the purchase. It involves real time communication at low cost. The main objective of digital marketing helps in building a brand from scratch. Constructing a brand is not just about making the customers recall a brand, but it is more about gaining the customer's trust, and that is exactly how well-known brands have become successful. Data will be collected through Primary and Secondary Source data. The scope of study businesses can use data to target audiences based on factors like gender, age, location, interests, and education. Companies can also retarget potential customers

who are already familiar with their brand using different methods and messages for each audience. When it comes to findings those are know your needs, know your strength, research their current work, consider the price. When it comes to conclusion The powerful difference in using digital marketing is that digital marketing has more appointed the customers as the main objection, which gives the customer full personalized service such as responding to their message and query thoroughly.

Abstract:

Any kind of event, big or small, will always have an impact of the performance of the stock in the market. Whether it being a positive or negative impact or how much the event has an impact on the market is secondary. This hold true to companies which are entering market for the first time. Initial Public offering is a very crucial part of a company's transition. So the performance of the IPO's will have a huge impact on the company's future plans and portfolios. COVID-19 was an unexpected event and it did have a negative impact on the secondary market. Stocks hit an all-time low but recovered slowly with time. But not many studies have been done with IPO's regarding the same. We do know that many companies which planned for IPO during the COVID era backed off as they were unable to take such a risk. So, the main objective of the study is to analyze the stock performance of companies which went for IPO'S before the COVID period (2017-2019) and the performance of companies which went for IPO's during

the COVID period (2020-2022). The data were collect from National Stock Exchange (NSE). The study took into consideration the returns generated on the day listing, the next day, 5th day, 10th day, 15th day, 20th day and 30th day respectively. Simple moving average was performed to understand how the stocks have performed in a short period. Furthermore, the study extends the discussion by investigating the relation between the age of the firm and the performance of IPO'S in the short run. By this study the investor will have an idea of trend of how IPO's perform the day of listing to one month during an event like COVID and will help the decision making.

Keywords: IPO, COVID-19, NSE, Stock performance

A STUDY ON EMERGING PAY TECHS AND ITS IMPLEMENTATION TOWARDS SMART CITIES DEVELOPMENT

MITHUN R , Dr. ROOPADARSHINI S

Abstract

The integration of pay tech in smart cities can provide numerous benefits, including increased convenience, improved efficiency, and enhanced security. However, the implementation of emerging pay tech solutions can also pose challenges, including cost, technical issues, and resistance to change. The research methodology for our study includes combination of literature review and content analysis with the aims in providing a comprehensive overview of the current state of pay tech in smart cities in India. The objective of the study is to identify and understand

the emerging pay techs like Cryptocurrencies, Biometric payments, Virtual and augmented reality payments, Internet of Things (IoT), & Mobile point-of-sale (POS) payment technologies role in smart cities development with its key opportunities and obstacles. In our paper we have analyzed and developed a 5M-Make, Mandate, Mentor, Motivate and Monitor model for implementation of pay techs in smart cities development, and also evaluated the implementation strategies of pay tech in the development of smart cities projects. As a part of conclusion of our study we say that these emerging payment technologies have more interoperability and scalability with the potential to create a more efficient, convenient, and engaging urban environment. The 5M model is necessary to ensure the safe and responsible adoption of these technologies, as well as to encourage people to use them. Our implementation strategies can improve the efficiency and convenience of their payment systems, and make it easier for residents and visitors to access and use city services. The results of this study can provide valuable guidance for policymakers, city planners, and other stakeholders who are interested in integrating pay tech in smart cities projects.

A STUDY ON PREVENTION OF SEXUAL HARASSMENT AND IMPROVISATION AT WORKPLACE UNDER POSH ACT 2013

Sampriti Sen

Course-MBA, Semester:1st

Regional college of management, Bangalore

Contact no-7003742944, Email id-23sampriti@gmail.com

Abstract

Dr BR Ambedkar the father of India's constitution rightly said that "I measure the progress of a community by the degree of progress which women have achieved". Although civilization has progressed, the denigration of women still persists in society across the globe and in the workplace. Sexual Harassment continues regardless of people's education, workplace environment and status in the society irrespective the workplace being construction site or an MNC. Research has shown that the most common manifestation of sexual harassment is gender harassment, which is rooted in contempt. The POSH (Prevention, Prohibition, and Remedies) Act, 2013 was established to ensure and promote a safe workplace for women that takes into account the right of women to balance dignity and opportunities. The Act was framed on 23rd April, 2013 on the basis of the Visakha judgment and subsequent judgments of the Supreme Court. Objective of this paper is to survey the sentiment that goes well with the world in a work environment that will improve women's participation

in the workplace, bringing their financial empowerment and comprehensive development and to explore the role of organizational culture in promoting and sustaining a workplace environment that is free from sexual harassment. Though the sexual harassment is widespread still there is a misconception among people from different walks of life that sexual harassment is just a myth in today's educated society. Regardless of whether they are educated or uneducated, most cases of sexual harassment occur because abused women are so stigmatized in society many remain silent and cannot tell what happened to them. The findings of this paper is to ascertain various strategies that organizations can use to reduce and prevent sexual harassment, such as developing strong policies and procedures, educating employees on the proper conduct expected in the workplace, and creating a culture of respect and inclusivity. This paper explains how much sexual harassment women experience in the workplace from secondary data collection method. It is concluded that sexual harassment creates a hostile work environment that can adversely affect an individual's work performance so creating a cohesive work environment free from sexual harassment can ultimately improve their social and economic growth.

Keywords- Sexual harassment, POSH, raising complaints, Roles and responsibility of organisation, Improve work culture.

Abstract

In the Indian context, the concept of sustainability has evolved in the financial sector. The COVID-19 pandemic has further highlighted the importance of sustainable practices that need to be at the core of both economic practice and

financial thinking. In connection with this, sustainable finance has become a fairly new metric that is being utilized by investors when it comes to making financial decisions. Hence the study is undertaken to understand the status of sustainable finance in India and trigger the obstacles as well as feasible opportunities for this field. For this study, the methodology is considered a systematic review of the literature. The researchers have searched and reviewed the existing literature to understand the status of sustainable finance in India. The findings of the paper reveal that this concept is still in its nascent stage and further needs to be worked out to take off this in the future. Besides, some of the difficulties notified are limited ESG companies, no well-defined benchmarks for ESG investing and sustainable finance, limited instruments to foster blended finance, no proper streamlining of financial and non-financial disclosures; and further opportunities identified that concerns exist with the chance to the introduction of new products and services such as green bonds, solidarity-based finance, and socially responsible investments, etc.,

A STUDY ON DIGITAL FINANCE IN GAMING

Nakshatra.P

Final Year B.com

Seshadripuram Degree College (Main)

Anusha HR

Assistant Professor

Department Of Commerce

Seshadripuram Degree College

Abstract

What is people's general reaction when they hear the word "Gaming"? It is either "Waste of time" or "Waste of money". There isn't a single person in this world who hasn't been scolded for playing games, right? But now generations, technologies and even the financial sector has evolved into a digital platform. We are in an age where we can earn through games. I am not talking about Rummy Circle or other Gambling sites, but rather a proper digital market for anyone to trade their Gaming Assets to earn money. The development of Blockchain and NFTs (Non-Fungible Tokens) has made that possible. NFTs give ownership of digital assets and they exist on "blockchains", an innovative technology that underlies cryptocurrencies like Bitcoin etc., The purpose of this research is to illuminate on, What and how NFT Gaming's work, how royalties work in gaming perception, how NFT Marketplace like Opensea or WazirX operates to earn money, what, and how "blockchain" is related to all this and finally a debate on, if at all gaming is the

way through “Metaverse”. This is an explanatory research where mixed method of research is used. The primary data for this, is collected through semi structured questionnaire and analysed by SPSS tools. The secondary data is collected from various sources like websites, newspaper articles, scholar research papers etc., To conclude, we can see the financial markets spread its roots into digital platform over the period of Pandemic and how gaming sector is no longer a non-financial sector which has no relation to companies, returns, profits etc.,

Keywords: Non fungible Tokens, Blockchains, Cryptocurrencies, Gaming assets, Bitcoin etc.,

POST COVID-19 WORK LIFE BALANCE: ISSUES AND CHALLENGES

PURUSHOTHAM CJ

Assistant Professor

Visvesvaraya Technological University

CPGS Muddenahalli, Chickaballapur

Mob:9008979320

Abstract

The COVID-19 pandemic has had a profound impact on the way people work and live. With the sudden shift to remote working, many people have found themselves struggling to balance their work and personal lives. This has led to increased stress levels, fatigue, and a lack of social interaction the COVID-19 pandemic and stay-home orders created an uncharted territory for remote work, where many workers had to switch to a new mode of work with minimum preparation. The situation was complicated further by the fact that many workers simultaneously had to undertake care responsibilities and to facilitate home learning. Many employees had to spend time learning new technologies to complete their work and to adjust to repeated changes in work procedures. While managing these changes, employees were constantly worried about the well-being and health of themselves and their family members . To address these issues, it is important for employers to understand the challenges their employees are facing and provide them with the support they need to maintain a healthy work-life balance. This paper examines

the work-life balance problems and solutions that have arisen because of the COVID-19 pandemic. It looks at the impact of the pandemic on work-life balance, including the increased workloads, reduced job security, and lack of social interaction. It then discusses potential solutions to these problems, such as flexible working arrangements, improved communication between employers and employees, and the use of technology to facilitate remote working. Finally, it suggests ways in which employers can help their employees maintain a healthy work-life balance during this difficult time.

Keywords: Work-life balance, COVID-19

The Impact of E-Commerce and Gratification Marketing on Dairy Industry in the context of Post Covid-19

Abstract

E-Commerce refers to the buying and selling of goods through online and conducting transactions online with the help of the internet. The Indian dairy sector stands at number 1 position in the universe by producing 21% of global milk production followed by USA, China, Brazil etc. The objective of the study is to make an attempt in understanding the importance of E-Commerce and how E-Commerce works in dairy industry in post-covid 19 era, the advantages of implementing E-Commerce in dairy industry, the way gratification marketing works in dairy industry and the advantages of gratification marketing in dairy industry during post-covid-19 and the present possible opportunities to implement gratification marketing in dairy industry. The study also aims to provide best possible

suggestions and ideas that the dairy industry should follow to bring in E-Commerce and Gratification marketing to the dairy industry. It is a conceptual paper prepared with the help of secondary data available in the various online platforms and also with the help of review of literature is what major concepts added to the study. This study defines the advantages involved in following E-Commerce along with gratification marketing strategy by the dairy industry with SWOT analysis.

Keywords: Dairy industry, E-commerce, Gratification, Customer satisfaction, Customer perception.

Customers' Perspective on Automated Grocery purchasing – Effect of AI-driven Conversational entities on Consumers' Behavioural Intention to Purchase.

Jyoti Rana^a, RuchiJain^b, KCSantosh^c

^a Research Scholar, Amity College of Commerce and Finance, Amity University, Uttar Pradesh, India,

rjain@amity.edu

^c Professor, Department of Computer Science, The University of South Dakota, USA
Santosh2.Kc@usd.edu

Abstract

Introduction: - Voice-activated AI-driven conversational entities (VAICE) are becoming a vital trend in bringing technological disruptions in supermarket transactions. The current study intends to combine anthropomorphism theories with privacy, trust, response time, affection and self-conscious AI, in one framework. The consumer–VAICE relationship has significant implications for customers' behavioural intention to purchase groceries online using VAICEs.

Methodology - A survey-based method was used to explore seven hypotheses.

Originality/ Novelty – This study is determined to answer the flowing gaps -The confounding effect (show the cause-and-effect relationship of the variable that causes both the predictor of interest and the outcome) of the educational background, gender, and customer age affect the consumer relationship with VAICEs. Measure how customers are concerned with privacy will affect the trust in the relationship of VAICE affection.

Findings- Therese research backs up VAICEs anthropomorphism and customer privacy concerns as predictors to generate confidence in VAICE and trust in VAICE as predictors of consumer–VAICEs affection and confirms the moderating influence of VAICEs response time.

Research Limitation/Implication- The findings support VAICE anthropomorphism and customer privacy concerns as determinants of confidence in VAICEs and trust in VAICEs as predictors of consumer–VAICE affection and the moderating effect of VAICE response time. A consumer–VAICE self-conscious AI arising from affection causes customers’ behavioural intention to purchase groceries via VAICEs.

Keywords- Online grocery, Artificial Intelligence, AI-driven Conversational Entities voice-activated (VAICE), Customer, PLS-SEM

A STUDY OF CELEBRITY ENDORSEMENT ON CONSUMER BUYING BEHAVIOUR.

Shaunli Chatterjee

Regional College of Management Bangalore

MBA 1st year

Contact No 9123098499

Email id shaunli2019@gmail.com

Abstract

Consumer Buying Behaviour can be defined as the psychology of buying behaviour related to the emotions, the buying pattern that the consumer goes through. The consumer usually begins by recognizing the fact that they are in need of the product, in a way to solve their needs they figure out where they can get the product, how much it costs, which vendors are the best to buy it from, when is the best time to buy it, and so on. The objective of this study is to concentrate on discovering the thoughts of customers about celebrity endorsement by analysing the different characteristics of the celebrity endorsement with respect to consumer's buying intentions. This study explores the impact of celebrity endorsement on consumer buying behaviour by employing a quantitative research design for which a structured research questionnaire has been made and the data were collected from 200 respondents over pan India using SRS sampling technique. As mentioned above, the type of data used is primary in nature. The findings indicate that there is a strong influence on celebrity endorsements on

the majority of the respondents. To conclude the result of descriptive analysis, reveal that celebrity endorsement does have positive impact on the celebrity endorser possessing attributes such as likability, attractiveness, credibility, and personality on consumer's purchase intentions.

Keywords: Celebrity Endorsement, Purchase Intention, Consumer Buying Behaviour.

Abstract

In the modern world, digital marketing plays a vital role in marketing. It is a tool of marketing that uses the internet and online digital technologies like mobile phones, tablets, computers or other digital media platforms. We have seen how vital online shopping is from the first half of 2020. At the peak of COVID-19 lockdown, online orders were increased compared to previous year. For all kinds of companies, Digital marketing was a lifeline when stores were closed. The main purpose is to know the importance of digital marketing to enhance the wealth of the organization. The objective of the study is to identify and improvise the recent trends prevailing in the market and to overcome the challenges faced by the marketer. Results of this study

reveal that all entities agree regarding mandatory, internet awareness for the growth in digital marketing in this study and results also establish that consumers feel positive towards digital communication, get affected by other customers' reviews and express their post-purchase feelings over digital platforms. To conclude, advancement of technology fosters multifaceted opportunities in marketing and at the same time it poses various unprecedented challenges for the marketer.

Keywords: Digital marketing, Digital communication, multifaceted opportunities.

AN EMPIRICAL STUDY ON GRAMA-ONE CENTRES- AWARENESS AND CUSTOMER SATISFACTION IN RURAL AREAS OF KARNATAKA.

Abstract

The Karnataka Government ambitious Grama-One initiative that is eliminate middleman and provide various government services to rural people was launched in Jan 2022. It is similar to Karnataka one, Bangalore One service centres. This study is undertaken to know the awareness about the scheme and to understand the level of customer satisfaction with regard to G-1 centres in different locations of the state. The Objectives of the study to understand the pattern of utilization of services in different Grama-One centres, to obtain feedback about Grama-One centers and its effectiveness, and to assess the satisfaction level of customers on various services being rendered by Grama-One centers. With respect to the chosen topic no research was found. The survey method is used to collect the data from convenient persons and through questionnaire method. Simple random sampling technique has been used for collecting the data.

The sample size is 100 (Customers of G-1 Centres). From this study came to know how G-1 centres are working and it is found that Customers of G-1 centers are getting timely services with affordable rates. But due to some Power cuts and connectivity problems service providers are facing interruptions which leads to delay in service. It is concluded that G-1 centers are working well and customers are highly satisfied. Future studies on awareness of G-1 centres, its working patterns and customer satisfaction are needed to explain the recruitment of G-1 centres in rural areas.

Abstract

Brand management or brand playing a vital role in the way of buyers & Seller's interface. The main aim is to write an article to know how the Corporate manages the brand in society. This article looks at how brand functions, offers insight into how brand management is evolving & factors that are driving changes in the field. Reason for brand & Corporate growth due to the advance in technology such as the inform system another factor is that consumer values are maturing. The retailer plays a key role to increase flexibility within the marketplace for branded products. For this research we used the questionnaire method for the survey through Google form. The findings of the study are that through the analysis we find that 68.5% of customer purchases by brand not by product, 16% customer are

purchasing by price convince, 15.5% customer by product. The Corporate were trying to influence the people in good manner, Corporate should advertise & Price should be reasonable. It is concluded that brand management is very essential concept of product, it is very crucial to managing the brand in a market.

PREVALENCE OF SUSTAINABLE PRACTICES IN A BUSINESS ORGANIZATION FROM AN EMPLOYEE PERSPECTIVE

Aparna B.Menon

Bachelor of Social work, Rajagiri College of Social Sciences

Dr. Nycil Romis Thomas

Assistant Professor, Rajagiri College of Social Sciences

Abstract

This probing study is conducted to measure the prevalence of Green HR and practices employed to promote sustainability in business organizations. It also tries to explain the employee's attitude towards sustainability in a business organization. Employees in the organization must be encouraged, empowered and eco-conscious to ensure that employees are moving towards green organizational functions. If the organization's policy and programmes align with the sustainable goals, then the employees will then increase their awareness and commitment towards sustainability. Quantitative research methodology and a descriptive research design was used for conducting the study. Hundred samples of employees from ten business organizations located in major metropolitan cities like Kochi, Chennai and Bangalore were collected using google forms. The collected data was analysed through SPSS. Self-report assessment of Pro -Environmental Behaviour Scale was used to measure the extent of sustainable practices

adopted by the employees in their personal lives. With increased awareness on sustainability and its influence on employee performance, most of the companies have initiatives that can contribute to Green HR. There is a positive trend in the measures taken by the multinational corporations towards sustainable development, then the large scale and small-scale organizations. Also, it has been found out that quarter of the companies are profit motive, when it comes to sustainability. Moreover, this paper will enhance knowledge, awareness, and better understand about the green management ideas and sustainable use of existing resources in the business organizations. Also, it is high time for the employees to become aware about the green concept, this marks the relevance of this paper. This study is vital in building responsibility towards the world and environment.

Abstract

The aim of the study is to find the explanatory impact pre and post adoption of International Financial Reporting Standards (IFRS) and the value relevance of Indian public companies listed on the BSE Sensex 30. The International Accounting Standards Board (IASB) introduced IFRS to bring accountability, transparency and efficiency to the financial market throughout the world (IFRS Foundation, 2022) by helping the Investor to identify the risk and rewards connected in terms of decision making. A major reason for the convergence with IFRS is to increase the value relevance of financial reporting. However, the present literature gives mixed results about the adoption of IFRS and its impact on the value relevance using the data from the early adoption

periods. This study employed simple regression analysis to analysis the relationship between the adoption of IFRS and the value relevance which is measured by the price value relevance using share price and earnings per share (EPS), Book value payments. The secondary data was collected from BSE Sensex 30 using random sampling, The year 2019 is included in this study due to exceptional cause of Covid 19 which had created a huge gap in the economy around the world. This study found that there is significant relationship between the adoption of IFRS and share price, EPS, Dividend per share and Book Value Per Share. This study also suggests recommendations for future research, such as a comparison between the pre and post adoption of IFRS.

Keywords: IFRS adoption, INDAS, Value Relevance, Mandatory.

A STUDY OF LUXURY BRAND MARKETING EFFECTIVENESS AND ITS IMPACT ON CONSUMER ENGAGEMENT ON SOCIAL MEDIA

Nityanand Patil

Abstract

Luxury brands have embraced the social media era through marketing communication pointing out the particular attributes of luxury such as high quality, rich pedigree, rarity, personality, placement, public relations and figures as well as a typically high pricing, to drive consumer engagement. Despite centuries of criticisms of luxury, the sector continues to grow, rapidly, globally, and especially in countries that previously lacked any such market. Structural changes in the types of sales and consumers affect the

concept of luxury for consumers. The purpose of this paper is to examine the study of luxury brand marketing impact in marketing and consumer behaviour by critically reviewing and it's effectiveness on Consumer Engagement on Social Media. This paper is proposed based on secondary data.

Keywords: Consumer Engagement, Social Media Marketing, Online Marketing, and Luxury Brand

A STUDY ON DIGITAL FINANCE RESEARCH AND DEVELOPMENTS IN INDIA

Dr Vijayaraj A Sahu

Assistant Professor, Department of Studies & Research in

Management, Gulbarga University Jnana Ganga,

Kalaburag-585106, Karnataka, India.

E-mail:vrajsahu@gamil.com

Abstract

This paper presents a concise review of the existing digital finance research in the literature, and highlights some of the developments in digital finance in India and around the world. The paper reached several conclusions. Firstly, it showed that digital finance has become an important part of modern finance and the major application of digital finance can be found in Fintech, embedded finance, open banking and decentralized finance, central bank digital currencies, among others. Secondly, it identified some international determinants of digital finance which includes the need for efficiency in financial services delivery, the need to achieve the United Nations sustainable development goals using existing digital technologies, the need to increase financial inclusion through digital financial inclusion and the need for efficient payments and payment settlement finality. The paper also finds that digital finance research is growing fast, and recent studies have investigated contemporary issues in digital finance that are relevant for policy and practice.

Regarding the digital finance developments around the world, the paper shows that the Fintech and mobile money industries are the largest beneficiary of investments in digital finance with the total number of users of mobile money services surpassing 1 billion globally.

A STUDY ON IMPACT OF DIGITAL MARKETING IN CUSTOMER PURCHASE DECISION

Mr. Abdul Matheen S

Ms. Bhavana K

Ms. Nisarga S A

Final Year BBA, NCMS

Chikkaballapur

Mr. Srinivas P

Assistant Professor

NCMS, Chikkaballapur

Abstract

Digital Marketing is the component of marketing that uses the internet and online based digital technologies such as desktop computers, mobile phones and other digital media and platforms to promote products and services. The purpose of the study is to observe the implication of digital marketing in customer purchase decisions and to discover that customers are aware of digital marketing and that the digital channels influence their purchase decision. The study is carried out by adopting primary data through structured questionnaires, with a survey of more than 100 respondents. The result of the survey is analysed by using a pie chart. The findings revealed that customers are aware of digital marketing and they choose to buy shopping goods through digital channels in their purchase behaviours. Today digital marketing has a greater scope for

expanding their business in the future as customer purchase decisions are more satisfied by doing online shopping. The study is carried out in a particular need to discover ways to meet global customers who spend most of their time on the internet. Customers find digital marketing much safer, less time-consuming and more economical than traditional marketing. With the updated technologies and increase in the usage of internet engagement, the inter connectivity of consumers is increasing day by day. As the world moves towards a digital era, digital channels play a crucial role in increasing sales of any firm's products. So, the prevailing study strives to expose the impact of digital marketing on customer purchase decisions.

Keywords: Digital Marketing, Digital Channels, Customer Purchase Behaviour.

Ashraf Unnisa , Assistant Professor
(Department of Management studies)

Shiva Surendra. P (MBA Student)

Susmitha. A (MBA Student)

Impact Institute of Management Studies, BANGALORE

Abstract

Digitalization is the global phenomena and seen in every business style. It is component of the marketing that uses the internet and online based digital technology such as computers, mobiles and other digital media to promote product and service. As digital platforms became increasingly incorporated into all marketing and business plans in everyday life. Now digitalization changes to the digital revolution which refers to the advancement of technology from analog electronic and mechanical devices to the digital technology available today. Entrepreneurship is the ability of entrepreneur to assess the risk and establish businesses which are risky but at the same time suites perfectly to the changing scenarios of the economic throat completion in all the business and its getting challenging to survive and sustain the business. Hence digitalization has become the turnkey for entrepreneurs. The objectives of the

article is to highlight major post covid -19 challenges faced by entrepreneur and to focus on the opportunities available through digitalization. This research article is prepared based on both primary and secondary data. Findings of the study is drawn from analyzed primary data , that the entrepreneur challenged digitalization to target customers , improve productivity and turnover market position , during covid -19. The limitations of the study is to spotlight the post covid -19 challenges faced by entrepreneur. This research paper concentrates on crucial challenges and opportunities available through digitalization during covid -19.

Keywords: Digitalization, Entrepreneurial Challenges, opportunities and post covid 19.

A DECENTRALIZED PLATFORM: PEER-TO-PEER BUSINESS MODEL IN INDIA

Mr Kiran Kumar T N

Asst. Professor

Dept.of Commerce & Management Studies
NCMS,

Mr Girish Kumar H V

Asst. Professor

Dept.of Commerce & Management Studies
NCMS,

Mr Ajith S

Asst Professor Dept.of Computer Science
NCMS,

Abstract

Peer-to-Peer (P2P) business model in India is a decentralized platform that enables individuals to transact directly with each other, without the need for intermediaries. This model has gained popularity in recent years, as it allows for greater efficiency and cost savings for both parties involved. P2P platforms have been particularly successful in the lending, real estate and ride-sharing sectors, by connecting borrowers and lenders, renters and property owners, riders and drivers. P2P lending platforms have been growing rapidly, with the number of registered platforms increasing from just a handful in 2014 to over 150 in 2020. These platforms have provided an alternative source of credit for

borrowers who are unable to access traditional banking services, and have also offered higher returns for investors. P2P real estate platforms have also been gaining traction in India, by connecting renters and property owners directly. These platforms have helped to reduce the cost and time involved in traditional rental processes, and have also made it easier for property owners to find tenants. Ride-sharing platforms like Ola and Uber are also uses P2P business model, connecting riders and drivers directly, which has led to a significant increase in the number of people using these services. This business model is still in its nascent stage and is facing several regulatory challenges, such as lack of clear laws and regulations. The Reserve Bank of India (RBI) has issued guidelines for P2P lending platforms, which require them to register with the central bank, and to comply with know-your-customer (KYC) and anti-money laundering (AML) regulations.

EMPLOYEE RETENTION AND ITS PRACTICES IN POST COVID-19 PERIOD

Muhammed Riyaz H,

Research Scholar, College of Management, SRMIST

Dr. Nisha Ashokan,

Associate Professor, College of Management, SRMIST

Abstract

Employers take measures to stop their important personnel from changing jobs by practising employee retention. This study uses data from 297 employees holding professional science (PS) positions from the Chennai headquarters of public ministerial offices to assess the overall impact of co-worker relationships, work environment, compensation, and job satisfaction on employee retention. The study is explanatory in design and quantitative in technique. The responses demonstrated happiness with their co-worker interactions, work environment, and jobs, according to the analysis of the descriptive statistics. They also demonstrated a mediocre degree of organisational dedication. However, they voiced their displeasure with how their separate organisations handled compensation. According to the results of the correlation study, there are weak but favourable links between co-worker relationships, the work environment, pay, and job satisfaction and employee retention. In another regard, employee retention and organisational commitment have a generally good link. According to the modified R square, employee retention

factors have an explanatory power of ($R = .278$), which means that they are responsible for explaining 27.8% of the variation in employee retention in the current study. It is clear from the study's analysis that the elements taken into account in the current study greatly contribute to the understanding of employee retention. Therefore, in order to keep their important employees, firms need to pay attention to those contributing elements. Given the dearth of research on this subject in the context of Chennai, this study might be the beginning of one that is considerably more thorough.

Abstract

This paper maps and describes the current and potential relationship between two different scientific branches of marketing science and computer science. It examines the interaction of digital marketing and artificial intelligence (AI) in academia, proposing, at the same time a machine learning model that could fit in several aspects of digital marketing scientific area. There are numerous scientific publications regarding artificial intelligence (AI) across the disciplines. However, referring to digital marketing aspects, this number remains small. Scientific research on artificial intelligence (AI) could benefit marketing science in numerous ways. Nowadays, only a small amount of scientific research referring to digital marketing and artificial intelligence (AI) is related to specific digital marketing methods. Most of the scientific research examines generic aspects such as e-business, consumer behavior, ecommerce strategies, social a advertisement, search engines and

consumer predictive modeling avoid being more related to specific marketing issues in which business world is more aware of, like consumer behavior on social media, targeted advertisements, social media marketing, conversion optimization, predictive models in online purchases, chat bots etc. Despite the vast research area and a certain number of publications, it seems that there is a lack of scientific publications regarding specifically digital marketing and artificial intelligence (AI). Nevertheless, there are some very extensive research attempts on specific digital marketing matters and artificial intelligence (AI) that are promising. This paper through the mapping of the current state of artificial intelligence (AI) applications on digital marketing scientific area.
